## General Aptitude (GA)

## Q. 1 - Q. 5 Carry ONE mark Each

| Q.1 | "You are delaying the completion of the task. Send ____ contributions at the <br> earliest." |
| :--- | :--- |
| (A) | you are |
| (B) | your |
| (C) | you're |
| (D) | yore |
|  |  |

| Q.2 | References :___(By word meaning) <br>  <br> (A) <br> Sight <br> (B) <br> (C) <br> Cite <br> (D) <br> Plagiarise |
| :--- | :--- |

| Q.3 | In the given figure, PQRS is a parallelogram with $\mathrm{PS}=7 \mathrm{~cm}, \mathrm{PT}=4 \mathrm{~cm}$ and <br> $\mathrm{PV}=5 \mathrm{~cm}$. What is the length of RS in cm ? (The diagram is representative.) |
| :--- | :--- |
|  |  |
| (A) | $\frac{20}{7}$ |
| (B) | $\frac{28}{5}$ |
| (C) | $\frac{9}{2}$ |
| (D) | $\frac{35}{4}$ |

| Q.4 | In 2022, June Huh was awarded the Fields medal, which is the highest prize in <br> Mathematics. <br> When he was younger, he was also a poet. He did not win any medals in the <br> International Mathematics Olympiads. He dropped out of college. <br> Based only on the above information, which one of the following statements can be <br> logically inferred with certainty? |
| :--- | :--- |
| (A) | Every Fields medalist has won a medal in an International Mathematics Olympiad. |$|$| (B) | Everyone who has dropped out of college has won the Fields medal. |
| :--- | :--- |
| (C) | All Fields medalists are part-time poets. |
| (D) | Some Fields medalists have dropped out of college. |
|  |  |

| Q. 5 | A line of symmetry is defined as a line that divides a figure into two parts in a way <br> such that each part is a mirror image of the other part about that line. <br> The given figure consists of 16 unit squares arranged as shown. In addition to the <br> three black squares, what is the minimum number of squares that must be coloured <br> black, such that both PQ and MN form lines of symmetry? (The figure is <br> representative) |
| :--- | :--- | :--- |
|  |  |
| (A) | 3 |
| (B) | 4 |
| (C) | 5 |

## Q. 6 - Q. 10 Carry TWO marks Each

| Q.6 | Human beings are one among many creatures that inhabit an imagined world. In <br> this imagined world, some creatures are cruel. If in this imagined world, it is given <br> that the statement "Some human beings are not cruel creatures" is FALSE, then <br> which of the following set of statement(s) can be logically inferred with certainty? <br> (i) |
| :--- | :--- |
| (ii) All human beings are cruel creatures.  <br> (iii) Some human beings are cruel creatures. <br> (iv)  <br> Some creatures that are cruel are human beings.  |  |
| (A) | only (i) |
| (B) | only (iii) and (iv) |
| (C) | only (i) and (ii) |
| (D) | (i), (ii) and (iii) |
|  |  |

| Q.7 | To construct a wall, sand and cement are mixed in the ratio of 3:1. The cost of sand <br> and that of cement are in the ratio of 1:2. <br> If the total cost of sand and cement to construct the wall is 1000 rupees, then what <br> is the cost (in rupees) of cement used? |
| :--- | :--- |
|  |  |
| (A) | 400 |
| (B) | 600 |
| (C) | 800 |
| (D) | 200 |

| Q.8 | The World Bank has declared that it does not plan to offer new financing to Sri <br> Lanka, which is battling its worst economic crisis in decades, until the country has <br> an adequate macroeconomic policy framework in place. In a statement, the World <br> Bank said Sri Lanka needed to adopt structural reforms that focus on economic <br> stabilisation and tackle the root causes of its crisis. The latter has starved it of <br> foreign exchange and led to shortages of food, fuel, and medicines. The bank is <br> repurposing resources under existing loans to help alleviate shortages of essential <br> items such as medicine, cooking gas, fertiliser, meals for children, and cash for <br> vulnerable households. <br> Based only on the above passage, which one of the following statements can be <br> inferred with certainty? |
| :--- | :--- |
| (A) | According to the World Bank, the root cause of Sri Lanka's economic crisis is that <br> it does not have enough foreign exchange. |
| (B) | The World Bank has stated that it will advise the Sri Lankan government about how <br> to tackle the root causes of its economic crisis. |
| (C) | According to the World Bank, Sri Lanka does not yet have an adequate <br> macroeconomic policy framework. |
| (D) | The World Bank has stated that it will provide Sri Lanka with additional funds for <br> essentials such as food, fuel, and medicines. |

| Q. 9 | The coefficient of $x^{4}$ in the polynomial $(x-1)^{3}(x-2)^{3}$ is equal to $\quad \_.$ |
| :--- | :--- |
|  |  |
| (A) | 33 |
| (B) | -3 |
| (C) | 30 |
| (D) | 21 |

| Q.10 | Which one of the following shapes can be used to tile (completely cover by <br> repeating) a flat plane, extending to infinity in all directions, without leaving any <br> empty spaces in between them? The copies of the shape used to tile are identical <br> and are not allowed to overlap. |
| :--- | :--- |
| (A) | circle |
| (B) | regular octagon |
| (C) | regular pentagon |
| (D) | rhombus |
|  |  |

## Q. 11 - Q. 35 Carry ONE mark Each

| Q.11 | If A and B are square matrices of order 3 such that $\|A\|=-1,\|B\|=3$, then $\|3 A B\|$ <br> equals |
| :--- | :--- |
| (A) | -81 |
| (B) | -27 |
| (C) | -9 |
| (D) | 81 |
| Q.12 | $\lim _{x \rightarrow 0} \frac{\sqrt{1+x}-1}{x}$ is equal to |
| (A) | 0 |
| (B) | $\frac{1}{2}$ |
| (C) | 1 |
| (D) | 2 |

Agricultural Engineering (AG)

| Q.13 | The value of $I=\int_{0}^{\frac{\pi}{2}} \frac{(\sin x+\cos x)^{2}}{\sqrt{1+\sin 2 x}} d x$ is |
| :--- | :--- |
| (A) | 0 |
| (B) | 1 |
| (C) | 2 |
| (D) | 3 |
| Q.14 | $y=a e^{m x}+b e^{-m x}$ is the solution of the differential equation |
| (A) | $\frac{d y}{d x}-m y=0$ |
| (B) | $\frac{d y}{d x}+m y=0$ |
| (C) | $\frac{d^{2} y}{d x^{2}}+m^{2} y=0$ |
| (D) | $\frac{d^{2} y}{d x^{2}}-m m^{2} y=0$ |
|  |  |

Agricultural Engineering (AG)

| Q.15 | In rotary tiller, the total energy requirement for carrying out tillage will decrease if |
| :--- | :--- |
| (A) | the bite length is increased |
| (B) | the bite length is decreased |
| (C) | the cone index of soil is higher |
| (D) | forward speed of the machine is reduced |
| Q.16 | The effectiveness of the turbocharger of a diesel engine increases when |
| (A) | the ambient temperature increases |
| (B) | the pressure ratio across the compressor decreases |
| (C) | the load on the engine increases |
| (D) | feed rate |
| (D) | the displacement volume of the engine decreases |
| (A) | cylinder diameter |
| (B) | cylinder speed |
| cylinder-concave clearance |  |
|  |  |

Agricultural Engineering (AG)

| Q.18 | In a 4-stroke single cylinder diesel engine, the inlet valve opens at $10^{\circ}$ before TDC <br> and closes at 40 after BDC. The exhaust valve opens at $25^{\circ}$ before BDC and closes <br> at $15^{\circ}$ after TDC. The percentage of time for which both the valves remain closed <br> in one cycle of the engine is |
| :--- | :--- |
| (A) | 32.29 |
| (B) | 40.97 |
| (C) | 46.53 |
| (D) | 75.01 |
| Q.19 | The torque available at maximum power developed by the tractor is $150 \mathrm{~N} \mathrm{m} If the$. <br> reserve torque is $20 \%$, the peak torque that can be developed by the tractor in N <br> is |
| (A) | 100 |
| (B) | 120 |
| (C) | 180 |
| (D) | 210 |
|  |  |

Agricultural Engineering (AG)

| Q.20 | The statement which is not correct for the porous medium is |
| :--- | :--- |
| (A) | Seepage velocity is always greater than the Darcy's velocity |
| (B) | Darcy's velocity is not exclusively controlled by soil porosity |
| (C) | Seepage velocity increases with increasing surface ponding of water |
| (D) | Darcy's velocity in unsaturated soil is always greater than that in saturated soil |
| Q.21 | A sprinkler irrigation system has been designed for a crop with the water application <br> rate of 1.17 cm $\mathrm{h}^{-1}$ and sprinkler discharge of 1.3 L s s <br> and uniformity coefficient are 0.9 and 0.8, respectively. If the sprinkler spacing <br> along the lateral is 20 m, the lateral spacing in m is |
| (A) | 14.4 |
| (B) | 16.0 |
| (C) | 18.0 |
| (D) | 20.0 |
|  |  |

Agricultural Engineering (AG)

| Q.22 | The average discharge, operating pressure and emitter constant of a drip emitter are <br> $4 \mathrm{~L} \mathrm{~h}^{-1}, 110 \mathrm{kPa}$ and 0.3, respectively. The type of emitter is |
| :--- | :--- |
| (A) | orifice |
| (B) | long path |
| (C) | pressure compensating |
| (D) | disc |
| Q.23 | If the departure and latitude of a line are 70 m and -130 m, respectively, then the <br> whole circle bearing of the line in degrees is |
| (A) | 28 |
| (B) | 62 |
| (C) | 152 |
| (D) | 208 |
|  |  |

| Q. 24 | Match the Columns: |  |
| :---: | :---: | :---: |
|  | I | II |
|  | 1. Tensiometer | a. Consumptive use |
|  | 2. Piezometer | b. Bernoulli's equation |
|  | 3. Lysimeter | c. Soil moisture |
|  | 4. Elbow meter | d. Hydrostatic pressure |
|  | 5. Pitot tube | e. Volumetric flow rate |
| (A) | $1-\mathrm{c}, 2-\mathrm{b}, 3-\mathrm{a}, 4-\mathrm{e}, 5-\mathrm{d}$ |  |
| (B) | $1-\mathrm{c}, 2-\mathrm{d}, 3-\mathrm{a}, 4-\mathrm{e}, 5-\mathrm{b}$ |  |
| (C) | $1-\mathrm{d}, 2-\mathrm{c}, 3-\mathrm{e}, 4-\mathrm{a}, 5-\mathrm{b}$ |  |
| (D) | $1-\mathrm{c}, 2-\mathrm{d}, 3-\mathrm{a}, 4-\mathrm{b}, 5-\mathrm{e}$ |  |
| Q. 25 | The information needed for estimating the design flood using Rational formula is |  |
| (A) | cumulative infiltration |  |
| (B) | antecedent moisture condition of soil |  |
| (C) | shape factor of the catchment |  |
| (D) | time of concentration of the catchment |  |

| Q. 26 | The microbial death kinetics for a food suspension follows the equation: $\log \frac{N_{0}}{N}=1+\frac{t-t_{l}}{D}$ <br> where $N_{\mathrm{o}}=$ initial microbial load, $N=$ microbial load after time $t, t_{l}=$ lag time and $D=$ decimal reduction time. <br> The correct statement for this equation is |
| :---: | :---: |
| (A) | the time required to reduce $10 \%$ of the initial population is lag time. |
| (B) | the time required to reduce the initial $90 \%$ of population is lag time |
| (C) | time required to kill the first $90 \%$ population is lower than $D$ value at the same temperature |
| (D) | lag time approaches $D$ value as $N_{0}$ becomes smaller and temperature decreases. |
| Q. 27 | If the diameter of fat globule in a cream separator is reduced to half and the rotational speed of the centrifuge increased to three times, the terminal settling velocity of fat globule is |
| (A) | decreased to 0.44 times |
| (B) | increased to 0.44 times |
| (C) | decreased to 2.25 times |
| (D) | increased to 2.25 times |
|  |  |

| Q.28 | The log mean temperature difference (LMTD) correction factor is not required <br> during heat transfer rate calculation in |
| :--- | :--- |
| (A) | plate heat exchanger |
| (B) | 1 shell pass and 1 tube pass heat exchanger |
| (C) | 1 shell pass and 2 tube pass heat exchanger |
| (D) | 2 shell pass and 4 tube pass heat exchanger |
| Q.29 | Identify the dimensionless parameter(s) from the following: |
| (A) | Cone index |
| (B) | Puddling index |
| (C) | Performance index |
| Q.30 | The probability that a storm event with a return period of 20 years will occur once <br> in 5-year period is <br> (D) |
| Reel index |  |
| Considering declining balance method, the constant rate of depreciation at which |  |
| the value of the tractor will come down to 50\% of its purchase price at the end of |  |
| 4th year in per cent is |  |
| rounded off to 2 decimal places). |  |
|  |  |

Agricultural Engineering (AG)

| Q. 32 | A trapezoidal grassed waterway with side slope $(\mathrm{H}: \mathrm{V})$ of $1: 1$ carries a design discharge of $1 \mathrm{~m}^{3} \mathrm{~s}^{-1}$. The bed slope and Manning's roughness coefficient of this channel are $1 \%$ and 0.04 , respectively. The design depth of the best hydraulic trapezoidal grassed waterway section in m is $\qquad$ (rounded off to 2 decimal places). |
| :---: | :---: |
|  |  |
| Q. 33 | The minimum fluidization height of 1.20 m is maintained during fluidized bed drying of carrots. The bed diameter of the fluidized bed dryer is 0.6 m . If mass and solid density of carrots are 250 kg and $1040 \mathrm{~kg} \mathrm{~m}^{-3}$, respectively, then the porosity of the bed at the minimum fluidization condition is $\qquad$ (rounded off to 3 decimal places, Consider $\pi=3.14$ ). |
| Q. 34 | The lighter liquid layer and the interphase layer in a basket centrifuge, rotating at a speed of 1000 rpm , are 0.1025 m and 0.105 m away from the center, respectively. Considering the densities of lighter and heavier liquids as $920 \mathrm{~kg} \mathrm{~m}^{-3}$ and $1015 \mathrm{~kg} \mathrm{~m}^{-3}$, the differential pressure in horizontal direction required to maintain the interphase layer in kPa is $\qquad$ (rounded off to 3 decimal places, Consider $\pi=3.14$ ). |
| Q. 35 | The upstream and downstream pressures in a homogenizer during homogenization of milk are maintained at 250 bar and 10 bar, respectively. If density of milk is $1030 \mathrm{~kg} \mathrm{~m}^{-3}$, then the velocity at which milk comes out of the homogenizing valve in $\mathrm{m} \mathrm{s}^{-1}$ is $\qquad$ (rounded off to 3 decimal places). |

Agricultural Engineering (AG)

## Q. 36 - Q. 65 Carry TWO marks Each

| Q.36 | If $\mathrm{A}=\left[\begin{array}{ll}1 & -1 \\ \text { are: }\end{array}\right], \mathrm{B}=\left[\begin{array}{cc\|}a & 1 \\ b & -1\end{array}\right]$ and $(A+B)^{2}=\mathrm{A}^{2}+\mathrm{B}^{2}$, then the values of $a$ and $b$ <br> (A) <br> (B) <br> $a=4, b=1$ <br> (C) <br> $a=0, b=4$ |
| :--- | :--- |
| (D) | $a=2, b=4$ |
| Q.37 | A vector $\vec{F}=5 \hat{\imath}-10 \hat{\jmath}+8 \hat{k}$ is passing through the origin of a 3-D frame. <br> Considering the tendency of rotation in the counter clockwise direction as positive, <br> the moment about a point A: $(3,4,8)$ is |
| (A) | $-16 \hat{\imath}+112 \hat{\jmath}+50 \hat{k}$ |
| (B) | $112 \hat{\imath}+16 \hat{\jmath}-50 \hat{k}$ |
| (C) | $50 \hat{\imath}-112 \hat{\jmath}+16 \hat{k}$ |
| $-112 \hat{\imath}-16 \hat{\jmath}+50 \hat{k}$ |  |

| Q.38 | A vertical disc plough with 5 discs is operated at a depth of 0.15 m. The disc angle <br> and disc diameter are $40^{0}$ and 0.6 m, respectively. If overlap between two <br> consecutive discs is 0.12 m at 0.15 m depth of cut, the total width of cut at the <br> specified depth in m is |
| :--- | :--- |
|  |  |
| (A) | 1.19 |
| (B) | 1.55 |
| (C) | 2.11 |
| (D) | 2.36 |
| Q.39 | In a $9 \times 20$ cm fluted roller type seed drill, each fluted roller is discharging 4.25 g of <br> seed per revolution of fluted roller shaft. The fluted roller shaft rotates once for two <br> complete rotation of the ground drive wheel of the seed drill. The rolling diameter <br> of the ground drive wheel is 0.35 m. Considering no skid of the ground drive wheel, <br> the seed rate in kg ha ${ }^{-1}$ is <br> Consider $\pi=3.14$ <br> (D) <br> 386.42 <br> (A) <br> 96.62 |
| 141.55 |  |
|  | 187.35 |

Agricultural Engineering (AG)

Agricultural Engineering (AG)

Agricultural Engineering (AG)

| Q. 44 | In a juice filtration process, solid concentration per $\mathrm{m}^{3}$ of filtrate is 0.2 kg . During filtration of $12.49 \mathrm{~m}^{3}$ of juice, 0.02 m thick cake (porosity of 0.32 ) is deposited. If 2.5 kg of solid is collected in 180 s , the pressure drop across the cake in kPa is <br> [Absolute viscosity of juice is $2.12 \times 10^{-3} \mathrm{~kg} \mathrm{~m}^{-1} \mathrm{~s}^{-1}$, and specific cake resistance is $\left.1.2 \times 10^{8} \mathrm{~m} \mathrm{~kg}^{-1}\right]$ |
| :---: | :---: |
|  |  |
| (A) | 0.18 |
| (B) | 1.81 |
| (C) | 18.06 |
| (D) | 180.60 |
| Q. 45 | Cheese is packed in a bilayer plastic package made up of low density polyethylene (LDPE) and polyethylene terephthalate (PET). The thickness of LDPE and PET in the package are 1.5 mm and 1.3 mm , respectively. The surface area of the plastic package is $6.25 \mathrm{~cm}^{2}$. The partial pressure difference of oxygen across the package wall is 0.30 atm . The permeability coefficient of oxygen in LDPE and PET are $4.18 \times 10^{-8} \mathrm{~cm}^{3} \mathrm{~cm} \mathrm{~cm}^{-2} \mathrm{~s}^{-1} \mathrm{~atm}^{-1}$ and $1.67 \times 10^{-10} \mathrm{~cm}^{3} \mathrm{~cm} \mathrm{~cm}^{-2} \mathrm{~s}^{-1} \mathrm{~atm}^{-1}$, respectively. If the food gets spoiled when it absorbs 0.025 ml of oxygen, then the shelf life of food in days is |
| (A) | 121 |
| (B) | 103 |
| (C) | 73 |
| (D) | 61 |
|  |  |

| Q.46 | The rotor shaft of an ice cream freezer consists of 3 scraper blades. The temperature <br> difference between the ice cream mix and the refrigerant during freezing of ice <br> cream is $30^{\circ} \mathrm{C}$. Density and latent heat of fusion of ice are $917 \mathrm{~kg} \mathrm{~m}^{-3}$ and 335 kJ <br> $\mathrm{~kg}^{-1}$, respectively. The overall heat transfer coefficient is $2000 \mathrm{~kJ} \mathrm{~m}^{-2} \mathrm{~h}^{-1} \mathrm{o}^{-1}$. If <br> the maximum thickness of ice formed before being scraped off is 10 mm , the <br> minimum speed of the scraper shaft in rpm is |
| :--- | :--- |
| (A) | 88 |
| (B) | 109 |
| (C) | 121 |
| (D) | 149 |
| Q.47 | The percentage absolute humidity of air becomes equal to the percentage relative <br> humidity, when |
| (C) | air is almost or completely dry |
| (D) | air is almost or completely saturated |
| (B) | saturated humidity of air is equal to relative humidity |
| (D) humidity of air is equal to relative humidity |  |
|  |  |

| Q. 51 | A power operated chaff cutter with a mean cutting radius of 0.25 m is fitted with two cutting knives and is rotating at 300 rpm . Thirty maize stalks with a mean diameter of 12 mm are fed through the throat at a time. The dynamic shear strength of the stalk is $0.05 \mathrm{~N} \mathrm{~mm}^{-2}$. The mass and radius of gyration of the flywheel (including knives) are 40 kg and 0.27 m , respectively. The total shaft power requirement in kW is $\qquad$ (rounded off to 2 decimal places). |
| :---: | :---: |
| Q. 52 | A two-wheel drive tractor with a total weight of 24 kN has a static weight distribution of $30 \%$ and $70 \%$ at the front and rear axles, respectively. When the tractor is operated on a level ground of pure sand, the maximum tractive force developed is 13 kN . If external weight of 1.5 kN is added to the rear axle, neglecting weight transfer, the change in maximum tractive force in kN is $\qquad$ (rounded off to 2 decimal places). |
| Q. 53 | A 4-stroke diesel engine can be operated with either diesel (heating value $45 \mathrm{MJ} \mathrm{kg}^{-1}$ ) or biodiesel blend, B20 (heating value $42.1 \mathrm{MJ} \mathrm{kg}^{-1}$ ). The brake specific fuel consumption of the engine when operated with diesel and B20 is $260 \mathrm{~g} \mathrm{~kW}^{-1} \mathrm{~h}^{-1}$ and $310 \mathrm{~g} \mathrm{~kW}^{-1} \mathrm{~h}^{-1}$, respectively. For developing a brake power of 20 kW , the change in brake thermal efficiency of the engine when B20 is used in place of diesel is $\qquad$ (rounded off to 2 decimal places). |
| Q. 54 | A solar photovoltaic system is used to generate power from total solar radiations varying from 400 to $750 \mathrm{~W} \mathrm{~m}^{-2}$. The maximum conversion efficiency of solar photovoltaic system is $14 \%$. The open circuit voltage, short circuit current and fill factor of solar cells are $21.6 \mathrm{~V}, 3.22 \mathrm{~A}$ and 0.72 , respectively. To generate maximum power, the minimum cell area required in $\mathrm{m}^{2}$ is $\qquad$ (rounded off to 3 decimal places). |
| Q. 55 | A single disc clutch is used to transmit 10 kW power at 1400 rpm . The axial pressure exerted on the contact surface is $0.07 \mathrm{~N} \mathrm{~mm}^{-2}$ and the coefficient of friction is 0.25 . Considering the ratio of diameter to face width of the clutch lining as 8 and assuming uniform wear theory, the required face width of friction lining in mm is $\qquad$ (rounded off to 2 decimal places). |

| Q. 56 | In a tractor seat system, the chassis frequency and seat suspension damping rate are $20 \mathrm{rad} \mathrm{s}^{-1}$ and $400 \mathrm{~N} \mathrm{~m}^{-1} \mathrm{~s}$, respectively. The critical damping rate of tractor seat system is $1600 \mathrm{~N} \mathrm{~m}^{-1} \mathrm{~s}$. If the combined mass of the seat and operator is 80 kg , the transmissibility of vibration is $\qquad$ (rounded off to 2 decimal places). |
| :---: | :---: |
| Q. 57 | Two cylindrical reservoirs ' $A$ ' and ' $B$ ' are connected by a 30 m long pipe of 250 mm internal diameter as shown in Figure below. The Darcy-Weisbach friction factor for the pipe is 0.025 . Initially the reservoir ' $A$ ' was full at the indicated level and reservoir ' $B$ ' was empty. If the entrance and exit losses in this pipe are neglected, the time required to empty the reservoir ' A ' in hour is $\qquad$ (rounded off to 3 decimal places). <br> Consider $\pi=3.14$ and acceleration due to gravity, $g=9.81 \mathrm{~m} \mathrm{~s}^{-2}$. |
|  |  |
|  |  |

| Q. 58 | A homogenous anisotropic earthen dam of height 52 m with a free board of 2 m is constructed on an impermeable foundation. The horizontal and vertical hydraulic conductivities of soil used for the construction of the dam are $4.5 \times 10^{-8} \mathrm{~m} \mathrm{~s}^{-1}$ and $2.0 \times 10^{-8} \mathrm{~m} \mathrm{~s}^{-1}$, respectively. There are 6 flow channels and 25 equipotential drops in a square flownet drawn in the transformed dam section. If the downstream dam side is dry, the quantity of seepage per unit length through the dam in $\mathrm{m}^{3} \mathrm{day}^{-1} \mathrm{~m}^{-1}$ is $\qquad$ (rounded off to 3 decimal places). |
| :---: | :---: |
|  |  |
| Q. 59 | A salt affected crop field is to be leached with irrigation water having salt concentration of $3.5 \mathrm{meq} \mathrm{L}^{-1}$. Salt concentration in the saturation extract of soil is 15.2 meq $\mathrm{L}^{-1}$. Leaching efficiency of the field is $55 \%$. In the month of March, the observed reference evapotranspiration and effective rainfall in this area are 150 mm and 75 mm , respectively. If the average crop coefficient in this month is 1.05 , the leaching requirement for the entire month in mm is $\qquad$ (rounded off to 2 decimal places). |
| Q. 60 | A 10 m long concrete pipe is required to carry a peak discharge of $1.0 \mathrm{~m}^{3} \mathrm{~s}^{-1}$ in a drop inlet spillway with a head of 4 m . The entrance loss coefficient is 0.5 and the friction loss coefficient is 0.02 . Consider acceleration due to gravity $=9.81 \mathrm{~m} \mathrm{~s}^{-2}$. The neutral slope of the water level in per cent is $\qquad$ (rounded off to 2 decimal places). |
| Q. 61 | Discharge from a centrifugal pump operating at 1000 rpm with a total head of 30 m is $300 \mathrm{~L} \mathrm{~min}^{-1}$. The pump efficiency is $65 \%$. If speed of the pump is increased to 1200 rpm , the power required to operate the pump in kW is $\qquad$ (rounded off to 2 decimal places). <br> Consider acceleration due to gravity $=9.81 \mathrm{~m} \mathrm{~s}^{-2}$. |
| Q. 62 | A 0.30 m diameter well penetrates an unconfined aquifer with a saturated depth of 40 m . After 8 hours of pumping at a steady rate of $0.03 \mathrm{~m}^{3} \mathrm{~s}^{-1}$, the drawdown in two observation wells located at 20 m and 50 m away from the pumping well are found to be 3 m and 2 m , respectively. The drawdown in the pumping well in m is $\qquad$ (rounded off to 1 decimal place, Consider $\pi=3.14$ ). |

## END OF QUESTION PAPER
