## General Aptitude (GA)

## Q. 1 - Q. 5 Carry ONE mark Each

| Q. 1 | "You are delaying the completion of the task. Send ____ contributions at the <br> earliest." |
| :--- | :--- |
| (A) | you are |
| (B) | your |
| (C) | you're |
| (D) | yore |
|  |  |

| Q.2 | References $: \ldots$ <br> (By word meaning) |
| :--- | :--- |
|  |  |
| (A) | Sight |
| (B) | Site |
| (C) | Cite |
| (D) | Plagiarise |
|  |  |

| Q.3 | In the given figure, PQRS is a parallelogram with $\mathrm{PS}=7 \mathrm{~cm}, \mathrm{PT}=4 \mathrm{~cm}$ and <br> $\mathrm{PV}=5 \mathrm{~cm}$. What is the length of RS in cm ? (The diagram is representative.) |
| :--- | :--- |
|  |  |
| (A) | $\frac{20}{7}$ |
| (B) | $\frac{28}{5}$ |
| (C) | $\frac{9}{2}$ |
| (D) | $\frac{35}{4}$ |

| Q.4 | In 2022, June Huh was awarded the Fields medal, which is the highest prize in <br> Mathematics. <br> When he was younger, he was also a poet. He did not win any medals in the <br> International Mathematics Olympiads. He dropped out of college. <br> Based only on the above information, which one of the following statements can be <br> logically inferred with certainty? |
| :--- | :--- |
| (A) | Every Fields medalist has won a medal in an International Mathematics Olympiad. |$|$| (B) | Everyone who has dropped out of college has won the Fields medal. |
| :--- | :--- |
| (C) | All Fields medalists are part-time poets. |
| (D) | Some Fields medalists have dropped out of college. |
|  |  |

| Q.5 | A line of symmetry is defined as a line that divides a figure into two parts in a way <br> such that each part is a mirror image of the other part about that line. <br> The given figure consists of 16 unit squares arranged as shown. In addition to the <br> three black squares, what is the minimum number of squares that must be coloured <br> black, such that both PQ and MN form lines of symmetry? (The figure is <br> representative) |
| :--- | :--- | :--- |
|  |  |
| (A) | 3 |
| (B) | 4 |
| (C) | 5 |

## Q. 6 - Q. 10 Carry TWO marks Each

| Q.6 | Human beings are one among many creatures that inhabit an imagined world. In <br> this imagined world, some creatures are cruel. If in this imagined world, it is given <br> that the statement "Some human beings are not cruel creatures" is FALSE, then <br> which of the following set of statement(s) can be logically inferred with certainty? <br> (i) |
| :--- | :--- |
| (ii) All human beings are cruel creatures.  <br> (iii) Some human beings are cruel creatures. <br> (iv)  <br> Some creatures that are cruel are human beings.  |  |
| (A) | only (i) |
| (B) | only (iii) and (iv) |
| (C) | only (i) and (ii) |
| (D) | (i), (ii) and (iii) |
|  |  |

| Q.7 | To construct a wall, sand and cement are mixed in the ratio of 3:1. The cost of sand <br> and that of cement are in the ratio of 1:2. <br> If the total cost of sand and cement to construct the wall is 1000 rupees, then what <br> is the cost (in rupees) of cement used? |
| :--- | :--- |
|  |  |
| (A) | 400 |
| (B) | 600 |
| (C) | 800 |
| (D) | 200 |

| Q.8 | The World Bank has declared that it does not plan to offer new financing to Sri <br> Lanka, which is battling its worst economic crisis in decades, until the country has <br> an adequate macroeconomic policy framework in place. In a statement, the World <br> Bank said Sri Lanka needed to adopt structural reforms that focus on economic <br> stabilisation and tackle the root causes of its crisis. The latter has starved it of <br> foreign exchange and led to shortages of food, fuel, and medicines. The bank is <br> repurposing resources under existing loans to help alleviate shortages of essential <br> items such as medicine, cooking gas, fertiliser, meals for children, and cash for <br> vulnerable households. <br> Based only on the above passage, which one of the following statements can be <br> inferred with certainty? |
| :--- | :--- |
| (A) | According to the World Bank, the root cause of Sri Lanka's economic crisis is that <br> it does not have enough foreign exchange. |
| (B) | The World Bank has stated that it will advise the Sri Lankan government about how <br> to tackle the root causes of its economic crisis. |
| (C) | According to the World Bank, Sri Lanka does not yet have an adequate <br> macroeconomic policy framework. |
| (D) | The World Bank has stated that it will provide Sri Lanka with additional funds for <br> essentials such as food, fuel, and medicines. |

| Q.9 | The coefficient of $x^{4}$ in the polynomial $(x-1)^{3}(x-2)^{3}$ is equal to $\ldots$ |
| :--- | :--- |
|  |  |
| (A) | 33 |
| (B) | -3 |
| (C) | 30 |
| (D) | 21 |

| Q.10 | Which one of the following shapes can be used to tile (completely cover by <br> repeating) a flat plane, extending to infinity in all directions, without leaving any <br> empty spaces in between them? The copies of the shape used to tile are identical <br> and are not allowed to overlap. |
| :--- | :--- |
| (A) | circle |
| (B) | regular octagon |
| (C) | regular pentagon |
| (D) | rhombus |
|  |  |

## Q. 11 - Q. 35 Carry ONE mark Each

| Q.11 | Which one of the following is the CORRECT value of $y$, as defined by the <br> expression given below? |
| :--- | :--- |
|  | $y=\lim _{x \rightarrow 0} \frac{2 x}{e^{x}-1}$ |
| (A) | 1 |
| (B) | 2 |
| (C) | 0 |
| (D) | $\infty$ |
| Q.12 | The vector $\vec{v}$ is defined as |
| (D) | 13 |
| (A) | 0 |
| (B) | 3 |
|  | Which one of the following is the CORRECT value of divergence of $\vec{v}$, evaluated <br> at the point $(x, y, z)=(3,2,1) ?$ |
|  |  |

| Q.13 | Given that |
| :--- | :--- |
|  | where $z_{1}=2+3 i$ and $z_{2}=-2+3 i$ with $i=\sqrt{-1}$, which one of the <br> following options is CORRECT? |
| (A) | $F<z_{1}\left\|+\left\|z_{2}\right\|\right.$ |
| (B) | $F<1$ |
| (C) | $F>1$ |
| (D) | $F=1$ |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q. 14 | For a two-dimensional plane, the unit vectors, $\left(\hat{e}_{r}, \hat{e}_{\theta}\right)$ of the polar coordinate system and $(\hat{\imath}, \hat{\jmath})$ of the cartesian coordinate system, are related by the following two equations. $\begin{aligned} & \hat{e}_{r}=\cos \theta \hat{\imath}+\sin \theta \hat{\jmath} \\ & \hat{e}_{\theta}=-\sin \theta \hat{\imath}+\cos \theta \hat{\jmath} \end{aligned}$ <br> Which one of the following is the CORRECT value of $\frac{\partial\left(\hat{e}_{r}+\hat{e}_{\theta}\right)}{\partial \theta}$ ? |
| :---: | :---: |
|  |  |
| (A) | 1 |
| (B) | $\hat{e}_{\theta}$ |
| (C) | $\hat{e}_{r}+\hat{e}_{\theta}$ |
| (D) | $-\hat{e}_{r}+\hat{e}_{\theta}$ |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q.15 | Which one of the following statements related to octane number is NOT correct? |
| :--- | :--- |
|  |  |
| (A) | Linear alkanes with higher carbon number have higher octane number. |
| (B) | Branching in linear alkanes increases their octane number. |
| (C) | Catalytic reforming of hydrocarbons increases their octane number. |
| (D) | Gasoline quality is measured in terms of octane number. |
| Q.16 | Which one of the following options represents the major components of oleum? |
| (D) |  |
| (D) | Sulfuric acid and sulfur trioxide |
| (C) | Sulfuric acid and hydrochloric acid |
| (Duric acid and nitric acid |  |
|  |  |
|  |  |

| Q.17 | For a reversible endothermic chemical reaction with constant heat of reaction over <br> the operating temperature range, $K$ is the thermodynamic equilibrium constant. <br> Which one of the following figures shows the CORRECT dependence of $K$ on <br> temperature $T$ ? |
| :--- | :--- |
| (A) |  |
| (B) |  |
| (D) |  |

| Q.18 | Nitrile rubber is manufactured via polymerization process. Which one of the <br> following options is the CORRECT pair of monomers used in this process? |
| :--- | :--- |
| (A) | Acrylonitrile and styrene |
| (B) | Acrylonitrile and butadiene |
| (C) | Butadiene and styrene |
| (D) | Butadiene and isoprene |
| Q.19 | John and Jane independently performed a thermodynamic experiment, in which $\mathbf{X}$ <br> and $\mathbf{Y}$ represent the initial and final thermodynamic states of the system, <br> respectively. John performed the experiment under reversible conditions, for which <br> the change in entropy of the system was $\boldsymbol{\Delta} \boldsymbol{S}_{\text {rev }}$. Jane performed the experiment <br> under irreversible conditions, for which the change in entropy of the system was <br> $\boldsymbol{\Delta} \boldsymbol{S}_{\text {irr }}$. Which one of the following relationships is CORRECT? |
| (D) | $\boldsymbol{\Delta} \boldsymbol{S}_{\boldsymbol{r e v}}=\mathbf{2 \Delta} \boldsymbol{S}_{\boldsymbol{i r r}}$ |
| (B) | $\boldsymbol{\Delta} \boldsymbol{S}_{\boldsymbol{r e v}}>\boldsymbol{\Delta} \boldsymbol{S}_{\boldsymbol{i r r}}$ |
| (C) | $\boldsymbol{\Delta} \boldsymbol{S}_{\boldsymbol{r e v}}<\boldsymbol{\Delta} \boldsymbol{S}_{\boldsymbol{i r r}}$ |
| $\boldsymbol{\Delta} \boldsymbol{S}_{\boldsymbol{i r r}}$ |  |

| Q.20 | For a packed-bed comprising of uniform-sized spherical particles of diameter $D_{\mathrm{p}}$, <br> the pressure drop across the bed is given by the Kozeny-Carman equation when the <br> particle Reynolds number $\left(\mathrm{Re}_{\mathrm{p}}\right)<1$. Under this condition, minimum fluidization <br> velocity is proportional to $D_{p}^{n}$. Which one of the following is the CORRECT value <br> of exponent $n ?$ |
| :--- | :--- |
| (A) | 2 |
| (B) | -1 |
| (C) | -2 |
| (D) | 1 |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q.22 | A slab of thickness $L$, as shown in the figure below, has cross-sectional area $A$ and <br> constant thermal conductivity $k . T_{1}$ and $T_{2}$ are the temperatures at $x=0$ and <br> $x=L$ respectively. Which one of the following options is the CORRECT <br> expression of the thermal resistance for steady-state one-dimensional heat <br> conduction? |
| :--- | :--- | :--- | :--- |

| Q.23 | Spray dryers have many advantages. Which one of the following is NOT an <br> advantage of a typical spray dryer? |
| :--- | :--- |
| (A) | Has short drying time |
| (B) | Produces hollow spherical particles |
| (C) | Has high heat efficiency |
| (D) | Is suitable for heat sensitive materials |
| Q.24 | Which one of the following quantities of a flowing fluid is measured using a <br> rotameter? |
| (D) |  |
| (D) | Dolumetric flow rate |
| Static pressure |  |
| (D) | Viscosity |
|  |  |

| Q. 25 | A liquid surge tank has $F_{\text {in }}$ and $F_{\text {out }}$ as the inlet and outlet flow rates respectively, as shown in the figure below. $F_{\text {out }}$ is proportional to the square root of the liquid level $h$. The cross-sectional area of the tank is $20 \mathrm{~cm}^{2}$. Density of the liquid is constant everywhere in the system. At steady state, $F_{\text {in }}=F_{\text {out }}=10 \mathrm{~cm}^{3} \mathrm{~s}^{-1}$ and $h=16 \mathrm{~cm}$. The variation of $h$ with $F_{i n}$ is approximated as a first order transfer function. Which one of the following is the CORRECT value of the time constant (in seconds) of this system? |
| :---: | :---: |
|  |  |
| (A) | 20 |
| (B) | 32 |
| (C) | 64 |
| (D) | 128 |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q.26 | A packed distillation column, with vapor having an average molecular weight of <br> $45 \mathrm{~kg} . \mathrm{kmol}^{-1}$, density of $2 \mathrm{~kg} . \mathrm{m}^{-3}$ and a molar flow rate of $0.1 \mathrm{kmol} \mathrm{s}^{-1}$, has a <br> flooding velocity of $0.15 \mathrm{~m} . \mathrm{s}^{-1}$. The column is designed to operate at $60 \%$ of the <br> flooding velocity. Which one of the following is the CORRECT value for the <br> column diameter (in m )? |
| :--- | :--- |
| (A) | $\frac{5}{\sqrt{\pi}}$ |
| (B) | $5 \sqrt{\pi}$ |
| (C) | $4 \pi$ |
| (D) | $\frac{10}{\sqrt{\pi}}$ |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q.27 | An isothermal jacketed continous stirred tank reactor (CSTR) operating at $150^{\circ} \mathrm{C}$ |
| :--- | :--- |
| is shown in the figure below. The cold feed entering the system at $30^{\circ} \mathrm{C}$ is preheated |  |
| to a temperature $T\left(T<150^{\circ} \mathrm{C}\right)$ using a heat exchanger $H X_{1}$. This preheated feed |  |
| is further heated to $150^{\circ} \mathrm{C}$ using the utility heater $H X_{2}$. The mass flow rate and heat |  |
| capacity are same for all the process streams, and the overall heat transfer |  |
| coefficient is independent of temperature. Which one of the following statements is |  |
| the CORRECT action to take if it is desired to increase the value of $T$ ? |  |

| Q.28 | Consider a system where a Carnot engine is operating between a source and a sink. <br> Which of the following statements about this system is/are NOT correct? |
| :--- | :--- |
| (A) | This engine is reversible. |
| (B) | The engine efficiency is independent of the source and sink temperatures. |
| (C) | This engine has the highest efficiency among all engines that operate between the <br> same source and sink. |
| (D) | The total entropy of this system increases at the completion of each cycle of the <br> engine. |
| Q.29 | For a fully developed turbulent flow of an incompressible Newtonian fluid through <br> a pipe of constant diameter, which of the following statements is/are CORRECT? |
| (D) | Average pressure gradient in the flow direction is constant. |
| (B) | Reynolds stress at the pipe wall is zero. |
| (C) | Average velocity of the fluid is half of its center-line velocity. <br> the pipe. |
| (Aress, averaged over a sufficiently long time, is zero everywhere inside |  |
|  |  |
|  |  |

| Q. 30 | Given that $E$ (in W. $\mathrm{m}^{-2}$ ) is the total hemispherical emissive power of a surface maintained at a certain temperature, which of the following statements is/are CORRECT? |
| :---: | :---: |
|  |  |
| (A) | $E$ does not depend on the direction of the emission. |
| (B) | $E$ depends on the viewfactor. |
| (C) | $E$ depends on the wavelength of the emission. |
| (D) | $E$ does not depend on the frequency of the emission. |
|  |  |
|  |  |
| Q. 31 | The position $x(t)$ of a particle, at constant $\omega$, is described by the equation $\frac{d^{2} x}{d t^{2}}=-\omega^{2} x$ <br> The initial conditions are $x(t=0)=1$ and $\left.\frac{d x}{d t}\right\|_{t=0}=0$. The position of the particle at $t=(3 \pi / \omega)$ is $\qquad$ (in integer). |
|  |  |
|  |  |
| Q. 32 | Burning of methane in a combustor yields carbon monoxide, carbon dioxide, and water vapor. Methane is fed to the combustor at $100 \mathrm{~mol} . \mathrm{hr}^{-1}$, of which $50 \%$ reacts. The theoretical oxygen requirement (in mol. $\mathrm{hr}^{-1}$ ) is $\qquad$ (rounded off to one decimal place). |
|  |  |

| Q. 33 | The viscosity of an incompressible Newtonian fluid is measured using a capillary tube of diameter 0.5 mm and length 1.5 m . The fluid flow is laminar, steady and fully developed. For a flow rate of $1 \mathrm{~cm}^{3} \mathrm{~s}^{-1}$, the pressure drop across the length of the tube is 1 MPa . If the viscosity of the fluid is $\boldsymbol{k} \times \mathbf{1 0}^{\mathbf{- 3}} \mathrm{Pa}$.s, the value of $\boldsymbol{k}$ is $\qquad$ (rounded off to two decimal places). |
| :---: | :---: |
|  |  |
|  |  |
| Q. 34 | A liquid $\boldsymbol{L}$ containing a dissolved gas $\boldsymbol{S}$ is stripped in a countercurrent operation using a pure carrier gas $\boldsymbol{V}$. The liquid phase inlet and outlet mole fractions of $\boldsymbol{S}$ are 0.1 and 0.01 , respectively. The equilibrium distribution of $\boldsymbol{S}$ between $\boldsymbol{V}$ and $\boldsymbol{L}$ is governed by $\boldsymbol{y}_{\boldsymbol{e}}=\boldsymbol{x}_{\boldsymbol{e}}$, where $\boldsymbol{y}_{\boldsymbol{e}}$ and $\boldsymbol{x}_{\boldsymbol{e}}$ are the mole fractions of $\boldsymbol{S}$ in $\boldsymbol{V}$ and $\boldsymbol{L}$, respectively. The molar feed rate of the carrier gas stream is twice as that of the liquid stream. Under dilute solution conditions, the minimum number of ideal stages required is $\qquad$ (in integer). |
|  |  |
|  |  |
| Q. 35 | In a binary gas-liquid system, $N_{A, E M D}$ is the molar flux of a gas $A$ for equimolar counter diffusion with a liquid $B . N_{A, U M D}$ is the molar flux of $A$ for steady onecomponent diffusion through stagnant $B$. Using the mole fraction of $A$ in the bulk of the gas phase as 0.2 and that at the gas-liquid interface as 0.1 for both the modes of diffusion, the ratio of $N_{A, U M D}$ to $N_{A, E M D}$ is equal to $\qquad$ (rounded off to two decimal places). |
|  |  |
|  |  |

## Q. 36 - Q. 65 Carry TWO marks Each

| Q.36 | An exhibition was held in a hall on 15 August 2022 between 3 PM and 4 PM during <br> which any person was allowed to enter only once. Visitors who entered before <br> 3:40 PM exited the hall exactly after 20 minutes from their time of entry. Visitors <br> who entered at or after 3:40 PM, exited exactly at 4 PM. The probability distribution <br> of the arrival time of any visitor is uniform between 3 PM and 4 PM. Two persons <br> $X$ and $Y$ entered the exhibition hall independent of each other. Which one of the <br> following values is the probability that their visits to the exhibition overlapped with <br> each other? |
| :--- | :--- |
| (A) | $\frac{5}{9}$ |
| (B) | $\frac{4}{9}$ |
| (C) | $\frac{2}{9}$ |
| (D) | $\frac{7}{9}$ |
|  |  |
|  |  |
|  |  |
|  |  |

| Q.37 | Simpson's one-third rule is used to estimate the definite integral |
| :--- | :--- |
|  | with an interval length of 0.5. Which one of the following is the CORRECT <br> estimate of $I$ obtained using this rule? |
| (A) | $\frac{1}{3}-\frac{1}{\sqrt{3}}$ |
| (B) | $\frac{1}{3}+\frac{2}{\sqrt{3}}$ |
| (C) | $\frac{1}{3}+\frac{1}{\sqrt{3}}$ |
| (D) | $\frac{1}{3}-\frac{2}{\sqrt{3}}$ |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q. 39 | Match the reactions in Group 1 with the catalysts in Group 2 listed in the table below. |  |
| :---: | :---: | :---: |
|  | Group 1 | Group 2 |
|  | P) $\mathrm{C}_{6} \mathrm{H}_{6}+\mathrm{Cl}_{2} \longrightarrow$ Chlorobenzene +HCl | I) Mixed oxide of Mo and Fe |
|  | Q) $\mathrm{H}_{2} \mathrm{C}=\mathrm{CH}_{2}+\frac{1}{2} \mathrm{O}_{2} \longrightarrow$ Ethylene oxide | II) $\mathrm{V}_{2} \mathrm{O}_{5}$ |
|  | R) $\mathrm{CH}_{3} \mathrm{OH}+\frac{1}{2} \mathrm{O}_{2} \longrightarrow$ Formaldehyde $+\mathrm{H}_{2} \mathrm{O}$ | III) $\mathrm{FeCl}_{3}$ |
|  | S) Naphthalene $+\frac{9}{2} \mathrm{O}_{2} \longrightarrow \begin{array}{r}\text { Phthalic Anhydride } \\ +2 \mathrm{H}_{2} \mathrm{O}+2 \mathrm{CO}_{2}\end{array}$ | IV) $\mathrm{Ag}_{2} \mathrm{O}$ |
| (A) | P-III, Q-IV, R-II, S-I |  |
| (B) | P-III, Q-IV, R-I, S-II |  |
| (C) | P-IV, Q-II, R-I, S-III |  |
| (D) | P-IV, Q-III, R-I, S-II |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

| Q.40 | Water in a container at 290 K is exposed to air containing $3 \% \mathrm{CO}_{2}$ by volume. Air <br> behaves like an ideal gas and is maintained at 100 kPa pressure. The liquid phase <br> comprising of dissolved $\mathrm{CO}_{2}$ in water behaves like an ideal solution. Use Henry's <br> constant of $\mathrm{CO}_{2}$ dissolved in water at 290 K as 12 MPa . Under equilibrium <br> conditions, which one of the following is the CORRECT value of the mole fraction <br> of $\mathrm{CO}_{2}$ dissolved in water? |
| :--- | :--- |
|  |  |
| (A) | $2.9 \times 10^{-4}$ |
| (B) | $0.9 \times 10^{-4}$ |
| (C) | $2.5 \times 10^{-4}$ |
| (D) | $0.5 \times 10^{-4}$ |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q. 41 | The enthalpy ( $H$, in $\mathrm{J} . \mathrm{mol}^{-1}$ ) of a binary liquid system at constant temperature and pressure is given as $H=40 x_{1}+60 x_{2}+x_{1} x_{2}\left(4 x_{1}+2 x_{2}\right)$ <br> where $x_{1}$ and $x_{2}$ represent the mole fractions of species 1 and 2 in the liquid, respectively. Which one of the following is the CORRECT value of the partial molar enthalpy of species 1 at infinite dilution, $\bar{H}_{1}^{\infty}$ (in J. mol ${ }^{-1}$ )? |
| :---: | :---: |
|  |  |
| (A) | 100 |
| (B) | 42 |
| (C) | 64 |
| (D) | 40 |
|  |  |
|  |  |
| Q. 42 | Which one of the following represents the CORRECT effects of concentration polarization in a reverse osmosis process? |
|  |  |
| (A) | Reduced water flux and reduced solute rejection |
| (B) | Increased water flux and increased solute rejection |
| (C) | Reduced water flux and increased solute rejection |
| (D) | Increased water flux and reduced solute rejection |

| Q. 43 | CO and $\mathrm{H}_{2}$ participate in a catalytic reaction. The partial pressures (in atm) of the reacting species CO and $\mathrm{H}_{2}$ in the feed stream are $p_{\mathrm{CO}}$ and $p_{\mathrm{H}_{2}}$, respectively. While CO undergoes molecular adsorption, $\mathrm{H}_{2}$ adsorbs via dissociative adsorption, that is, as hydrogen atoms. The equilibrium constants (in $\mathrm{atm}^{-1}$ ) corresponding to adsorption of CO and $\mathrm{H}_{2}$ to the catalyst sites are $K_{\mathrm{CO}}$ and $K_{\mathrm{H}_{2}}$, respectively. Total molar concentration of active sites per unit mass of the catalyst is $C_{t}$ (in mol. (g cat) ${ }^{-1}$ ). Both the adsorption steps are at equilibrium. Which one of the following expressions is the CORRECT ratio of the concentration of catalyst sites occupied by CO to that by hydrogen atoms? |
| :---: | :---: |
|  |  |
| (A) | $\frac{K_{\mathrm{CO}} p_{\mathrm{CO}}}{\sqrt{K_{\mathrm{H}_{2}} p_{\mathrm{H}_{2}}}}$ |
| (B) | $\frac{K_{\mathrm{CO}}}{\sqrt{\boldsymbol{K}_{\mathrm{H}_{2}}}}$ |
| (C) | $\frac{p_{\mathrm{CO}}}{\sqrt{\boldsymbol{p}_{\mathrm{H}_{2}}}}$ |
| (D) | $\frac{K_{\mathrm{CO}} \boldsymbol{p}_{\mathrm{CO}}}{\boldsymbol{K}_{\mathrm{H}_{2}} \boldsymbol{p}_{\mathrm{H}_{2}}}$ |
|  |  |
|  |  |
|  |  |
|  |  |

| Q. 44 | A cascade control strategy is shown in the figure below. The transfer function between the output $(y)$ and the secondary disturbance $\left(d_{2}\right)$ is defined as $G_{d 2}(s)=\frac{y(s)}{d_{2}(s)}$ <br> Which one of the following is the CORRECT expression for the transfer function $G_{d 2}(s)$ ? |
| :---: | :---: |
|  |  |
| (A) | $\frac{1}{(11 s+21)(0.1 s+1)}$ |
| (B) | $\frac{1}{(s+1)(0.1 s+1)}$ |
| (C) | $\frac{(s+1)}{(s+2)(0.1 s+1)}$ |
| (D) | $\frac{(s+1)}{(s+1)(0.1 s+1)}$ |
|  |  |
|  |  |
|  |  |

| Q.45 | Level (h) in a steam boiler is controlled by manipulating the flow rate $(F)$ of the <br> make-up (fresh) water using a proportional (P) controller. The transfer function <br> between the output and the manipulated input is |
| :--- | :--- |
| $\qquad \frac{h(s)}{F(s)}=\frac{0.25(1-s)}{s(2 s+1)}$. |  |
|  | The measurement and valve transfer functions are both equal to 1. A process <br> engineer wants to tune the controller so that the closed-loop response gives decaying <br> oscillations under servo mode. Which one of the following is the CORRECT value <br> of the controller gain to be used by the engineer? |
| (A) | 0.25 |
| (B) | 2 |
| (C) | 4 |
| (D) | 6 |
| (Diot number includes gravity. |  |
| (B) | Prandtl number includes liquid-vapor density difference. |
| (A) | Which of the following statements is/are CORRECT? |
|  | Bond number includes surface tension. |
|  |  |
|  |  |

| Q. 51 | A pump draws water (density $=1000 \mathrm{~kg} \cdot \mathrm{~m}^{-3}$ ) at a steady rate of $10 \mathrm{~kg} \cdot \mathrm{~s}^{-1}$. The pressures at the suction and discharge sides of the pump are -20 kPa (gauge) and 350 kPa (gauge), respectively. The pipe diameters at the suction and discharge side are 70 mm and 50 mm , respectively. The suction and discharge lines are at the same elevation, and the pump operates at an efficiency of $80 \%$. Neglecting frictional losses in the system, the power (in kW ) required to drive the pump is $\qquad$ (rounded off to two decimal places). |
| :---: | :---: |
| Q. 52 | A cylindrical tank with a diameter of 500 mm contains water (density $=1 \mathrm{~g} . \mathrm{cm}^{-3}$ ) upto a height $h$. A 5 mm diameter round nozzle, whose center is 1 cm above the base of the tank, has its exit open to the atmosphere as shown in the schematic below. The pressure above the water level in the tank is maintained at 2 bar (absolute). Neglect all frictional and entry/exit losses. Use acceleration due to gravity as $10 \mathrm{~m} . \mathrm{s}^{-2}$ and atmospheric pressure as 1 bar. The absolute value of initial $\frac{d h}{d t}$ (in $\mathrm{mm} \cdot \mathrm{s}^{-1}$ ) when $h=51 \mathrm{~cm}$ is equal to $\qquad$ (rounded off to two decimal places). |
|  |  |

| Q. 53 | A large tank is filled with water (density $=1 \mathrm{~g} \cdot \mathrm{~cm}^{-3}$ ) upto a height of 5 m . A $100 \mu \mathrm{~m}$ diameter solid spherical particle (density $=0.8 \mathrm{~g} . \mathrm{cm}^{-3}$ ) is released at the bottom of the tank. The particle attains its terminal velocity $\left(v_{t}\right)$ after traveling to a certain height in the tank. Use acceleration due to gravity as $10 \mathrm{~m} . \mathrm{s}^{-2}$ and water viscosity as $10^{-3} \mathrm{~Pa} . \mathrm{s}$. Neglect wall effects on the particle. If Stokes law is applicable, the absolute value of $v_{t}$ (in $\mathrm{mm} . \mathrm{s}^{-1}$ ) is $\qquad$ (rounded off to two decimal places). |
| :---: | :---: |
|  |  |
| Q. 54 | A fluid is flowing steadily under laminar conditions over a thin rectangular plate at temperature $T_{s}$ as shown in the figure below. The velocity and temperature of the free stream are $u_{\infty}$ and $T_{\infty}$, respectively. When the fluid flow is only in the $x$ direction, $h_{x}$ is the local heat transfer coefficient. Similarly, when the fluid flow is only in the $y$-direction, $h_{y}$ is the corresponding local heat transfer coefficient. Use the correlation $\mathrm{Nu}=0.332(\mathrm{Re})^{1 / 2}(\mathrm{Pr})^{1 / 3}$ for the local heat transfer coefficient, where, $\mathrm{Nu}, \mathrm{Re}$, and Pr , respectively are the appropriate Nusselt, Reynolds and Prandtl numbers. The average heat transfer coefficients are defined as $\bar{h}_{l}=\frac{1}{l} \int_{0}^{l} h_{x} d x$ and $\bar{h}_{w}=\frac{1}{w} \int_{0}^{w} h_{y} d y$. If $w=1 \mathrm{~m}$ and $l=4 \mathrm{~m}$, the value of the ratio of $\bar{h}_{w}$ to $\bar{h}_{l}$ is $\qquad$ (in integer). |

|  |  |

| Q. 55 | A perfectly insulated, concentric tube countercurrent heat exchanger is used to cool lubricating oil using water as a coolant (see figure below). Oil enters the outer annulus at a mass flow rate of $2 \mathrm{~kg} . \mathrm{s}^{-1}$ with a temperature of $100^{\circ} \mathrm{C}$ and leaves at $40^{\circ} \mathrm{C}$. Water enters the inner tube at a mass flow rate of $1 \mathrm{~kg} . \mathrm{s}^{-1}$ with a temperature of $20^{\circ} \mathrm{C}$ and leaves at $80^{\circ} \mathrm{C}$. Use specific heats of oil and water as $2089 \mathrm{~J} . \mathrm{kg}^{-1} \mathrm{~K}^{-1}$ and $4178 \mathrm{~J} . \mathrm{kg}^{-1} \mathrm{~K}^{-1}$, respectively. There is no phase change in both the streams. Under steady-state conditions, the number of transfer units (NTU) is $\qquad$ (in integer). |
| :---: | :---: |
|  |  |
| Q. 56 | Partially saturated air at 1 bar and $50^{\circ} \mathrm{C}$ is contacted with water in an adiabatic saturator. The air is cooled and humidified to saturation, and exits at $25^{\circ} \mathrm{C}$ with an absolute humidity of 0.02 kg water per kg dry air. Use latent heat of vaporization of water as $2450 \mathrm{~kJ} . \mathrm{kg}^{-1}$, and average specific heat capacity for dry air and water, respectively as $1.01 \mathrm{~kJ} \cdot \mathrm{~kg}^{-1} \mathrm{~K}^{-1}$ and $4.18 \mathrm{~kJ} . \mathrm{kg}^{-1} \mathrm{~K}^{-1}$. If the absolute humidity of air entering the adiabatic saturator is $\mathcal{H} \times \mathbf{1 0}^{\mathbf{- 3}} \mathrm{kg}$ water per kg dry air, the value of $\mathcal{H}$ is $\qquad$ (rounded off to two decimal places). |
|  |  |

| Q. 57 | Distillation of a non-reactive binary mixture with components $A$ and $B$ is carried out in a batch still as shown in the figure below. The initial charge of the mixture in the still is 1 kmol . The initial and final amounts of $A$ in the still are 0.1 kmol and 0.01 kmol , respectively. Use a constant relative volatility of 4.5. The mole fraction of $B$ remaining in the vessel is $\qquad$ (rounded off to three decimal places). |

|  |  |
| Q. 58 | Fresh catalyst is loaded into a reactor before the start of the following catalytic reaction. <br> $A \longrightarrow$ products <br> The catalyst gets deactivated over time. The instantaneous activity $a(t)$, at time $t$, is defined as the ratio of the rate of reaction $-r_{A}^{\prime}(t)\left(\mathrm{mol} .(\mathrm{g} \mathrm{cat})^{-1} \mathrm{hr}^{-1}\right)$ to the rate of reaction with fresh catalyst. Controlled experimental measurements led to an empirical correlation $-r_{A}^{\prime}(t)=-0.5 t+10$ <br> where $t$ is in hours. The activity of the catalyst at $t=10 \mathrm{hr}$ is $\qquad$ (rounded off to one decimal place). |

Q. $60 \quad$\begin{tabular}{l}
An irreversible liquid-phase second-order reaction <br>

| with rate constant $k=0.2$ liter. $\mathrm{mol}^{-1} \mathrm{~min}^{-1}$, is carried out in an isothermal |
