## General Aptitude (GA)

## Q. 1 - Q. 5 Carry ONE mark Each

| Q. 1 | "You are delaying the completion of the task. Send ____ contributions at the <br> earliest." |
| :--- | :--- |
| (A) | you are |
| (B) | your |
| (C) | you're |
| (D) | yore |
|  |  |

| Q.2 | References $: \ldots$ <br> (By word meaning) |
| :--- | :--- |
|  |  |
| (A) | Sight |
| (B) | Site |
| (C) | Cite |
| (D) | Plagiarise |
|  |  |

| Q.3 | In the given figure, PQRS is a parallelogram with $\mathrm{PS}=7 \mathrm{~cm}, \mathrm{PT}=4 \mathrm{~cm}$ and <br> $\mathrm{PV}=5 \mathrm{~cm}$. What is the length of RS in cm ? (The diagram is representative.) |
| :--- | :--- |
|  |  |
| (A) | $\frac{20}{7}$ |
| (B) | $\frac{28}{5}$ |
| (C) | $\frac{9}{2}$ |
| (D) | $\frac{35}{4}$ |

| Q.4 | In 2022, June Huh was awarded the Fields medal, which is the highest prize in <br> Mathematics. <br> When he was younger, he was also a poet. He did not win any medals in the <br> International Mathematics Olympiads. He dropped out of college. <br> Based only on the above information, which one of the following statements can be <br> logically inferred with certainty? |
| :--- | :--- |
| (A) | Every Fields medalist has won a medal in an International Mathematics Olympiad. |$|$| (B) | Everyone who has dropped out of college has won the Fields medal. |
| :--- | :--- |
| (C) | All Fields medalists are part-time poets. |
| (D) | Some Fields medalists have dropped out of college. |
|  |  |

| Q. 5 | A line of symmetry is defined as a line that divides a figure into two parts in a way <br> such that each part is a mirror image of the other part about that line. <br> The given figure consists of 16 unit squares arranged as shown. In addition to the <br> three black squares, what is the minimum number of squares that must be coloured <br> black, such that both PQ and MN form lines of symmetry? (The figure is <br> representative) |
| :--- | :--- | :--- |
|  |  |
| (A) | 3 |
| (B) | 4 |
| (C) | 5 |

## Q. 6 - Q. 10 Carry TWO marks Each

| Q.6 | Human beings are one among many creatures that inhabit an imagined world. In <br> this imagined world, some creatures are cruel. If in this imagined world, it is given <br> that the statement "Some human beings are not cruel creatures" is FALSE, then <br> which of the following set of statement(s) can be logically inferred with certainty? <br> (i) |
| :--- | :--- |
| (ii) All human beings are cruel creatures.  <br> (iii) Some human beings are cruel creatures. <br> (iv)  <br> Some creatures that are cruel are human beings.  |  |
| (A) | only (i) |
| (B) | only (iii) and (iv) |
| (C) | only (i) and (ii) |
| (D) | (i), (ii) and (iii) |
|  |  |

| Q.7 | To construct a wall, sand and cement are mixed in the ratio of 3:1. The cost of sand <br> and that of cement are in the ratio of 1:2. <br> If the total cost of sand and cement to construct the wall is 1000 rupees, then what <br> is the cost (in rupees) of cement used? |
| :--- | :--- |
|  |  |
| (A) | 400 |
| (B) | 600 |
| (C) | 800 |
| (D) | 200 |

| Q.8 | The World Bank has declared that it does not plan to offer new financing to Sri <br> Lanka, which is battling its worst economic crisis in decades, until the country has <br> an adequate macroeconomic policy framework in place. In a statement, the World <br> Bank said Sri Lanka needed to adopt structural reforms that focus on economic <br> stabilisation and tackle the root causes of its crisis. The latter has starved it of <br> foreign exchange and led to shortages of food, fuel, and medicines. The bank is <br> repurposing resources under existing loans to help alleviate shortages of essential <br> items such as medicine, cooking gas, fertiliser, meals for children, and cash for <br> vulnerable households. <br> Based only on the above passage, which one of the following statements can be <br> inferred with certainty? |
| :--- | :--- |
| (A) | According to the World Bank, the root cause of Sri Lanka's economic crisis is that <br> it does not have enough foreign exchange. |
| (B) | The World Bank has stated that it will advise the Sri Lankan government about how <br> to tackle the root causes of its economic crisis. |
| (C) | According to the World Bank, Sri Lanka does not yet have an adequate <br> macroeconomic policy framework. |
| (D) | The World Bank has stated that it will provide Sri Lanka with additional funds for <br> essentials such as food, fuel, and medicines. |

| Q.9 | The coefficient of $x^{4}$ in the polynomial $(x-1)^{3}(x-2)^{3}$ is equal to $\quad$ |
| :--- | :--- |
|  |  |
| (A) | 33 |
| (B) | -3 |
| (C) | 30 |
| (D) | 21 |

| Q.10 | Which one of the following shapes can be used to tile (completely cover by <br> repeating) a flat plane, extending to infinity in all directions, without leaving any <br> empty spaces in between them? The copies of the shape used to tile are identical <br> and are not allowed to overlap. |
| :--- | :--- |
| (A) | circle |
| (B) | regular octagon |
| (C) | regular pentagon |
| (D) | rhombus |
|  |  |

## Q. 11 - Q. 35 Carry ONE mark Each

| Q.11 | Which one of the following is an example of mechanical potential energy? |
| :--- | :--- |
|  |  |
| (A) | Activated neuron |
| (B) | Polarized cell membrane |
| (C) | Stretched tendon |
| (D) | Relaxed muscle |
| Q.12 | A research team studies the probability of crop damage by wild boar in crop <br> fields. For each crop field sampled, they record '1' if damage was observed, and <br> '0' if damage was not observed. Which one of the following distributions is most <br> appropriate to analyse the probability of crop damage? |
| (D) | Gamma distribution |
| (B) | Binomial distribution |
| (Coisson distribution |  |
| Cauchy distribution |  |
|  |  |

| Q. 13 | To test whether body size differs between two populations of a field mouse <br> species, a researcher measured 100 individuals in each population and calculated <br> the statistic |
| :--- | :--- |
|  | where $\bar{X}_{1}$ and $\bar{X}_{2}$ are the mean body sizes of the two populations, respectively, <br> $S_{p}$ is the pooled standard deviation, and $n_{1}$ and $n_{2}$ are the sample sizes for the two <br> populations, respectively. <br> This statistic is used in the |
| (A) | Chi-square test |

| Q.14 | Which one of the following ecological processes best explains the observation that <br> seedling establishment increases with distance from the parent tree in a forest? |
| :--- | :--- |
| (A) | Competition between species |
| (B) | Competition within species |
| (C) | Facilitation between species |
| (D) | Facilitation within species |
| Q.15 | In the early 20 <br> contributions to both the fields of evolution and statistics? fundamental |
| (A) | R. A. Fisher |
| (B) | Niko Tinbergen |
| (C) | August Weismann |
| Thomas Huxley |  |
|  |  |

| Q. 16 | The figure depicts how body temperature changes for two species (L and M) as a <br> function of ambient temperature. |
| :--- | :--- |
| (A) | Land M are both homeotherms. |
| correct? |  |

| Q. 17 | You are a deep-sea organism and your potential mates are several hundreds of kilometers away from you. Which one of the following kinds of mating signals is most likely to help them locate you? |
| :---: | :---: |
| (A) | Display gestures |
| (B) | Electric pulses |
| (C) | Body colouration |
| (D) | Sounds |
| Q. 18 | Which one of the following options represents the correct order with respect to levels of organization? <br> B - biomes; E - ecosystems; P - populations; I - individuals; C - communities |
| (A) | I $<$ P $<$ C $<$ E $<$ B |
| (B) | I $<$ C $<\mathrm{P}<\mathrm{E}<\mathrm{B}$ |
| (C) | I $<\mathrm{E}<\mathrm{C}<\mathrm{P}<\mathrm{B}$ |
| (D) | I $<$ P $<$ E $<$ C $<$ B |
|  |  |

| Q.19 | Which one of the following options describes the difference between abiotic <br> resources and abiotic conditions? |
| :--- | :--- |
| (A) | Resource levels can fluctuate but conditions do not. |
| (B) | Conditions can fluctuate but resource levels do not. |
| (C) | Resources can be used up by organisms, whereas conditions cannot. |
| (D) | Conditions can be used up by organisms, whereas resources cannot. |
| Q.20 | Which one of the following ranges correctly represents the percentage of energy <br> that is transferred from a lower to the next higher trophic level in most terrestrial <br> systems? |
| (D) | $2 \%$ to $20 \%$ |
| (D) | $90 \%$ to $95 \%$ |
| (B) | $33 \%$ to $66 \%$ |
|  |  |
|  |  |

| Q.23 | The increase in mean global temperature since the industrial revolution falls in the <br> range of |
| :--- | :--- |
| (A) | $0{ }^{\circ} \mathrm{C}$ to $0.5^{\circ} \mathrm{C}$ |
| (B) | $0.5^{\circ} \mathrm{C}$ to $2^{\circ} \mathrm{C}$ |
| (C) | $2{ }^{\circ} \mathrm{C}$ to $5^{\circ} \mathrm{C}$ |
| (D) | $>5{ }^{\circ} \mathrm{C}$ |
| Q.24 | Which one of the following endangered species has been the subject of a <br> reintroduction plan in India? |
| (D) |  |
| (Daguar |  |
| (B) | Rungle cat spotted cat |
| Cheetah |  |
|  |  |
|  |  |

| Q.25 | Compared with bony fish, many shark species show steeper population declines in <br> response to heavy fishing pressure. Which one of the following options explains <br> this? |
| :--- | :--- |
| (A) | Sharks are dangerous to humans. |
| (B) | Sharks evolved over 400 million years ago. |
| (C) | Sharks are long lived and late maturing. |
| (D) | Sharks are only found in open oceans. |
| Q.26 | Which one or more of the following options describe(s) how ferns differ from <br> angiosperms and gymnosperms? |
| (D) | Ferns have separate haploid and diploid generations. |
| (C) | Ferns are pollinated by flies. |
| (A) | Ferns lack a vascular system. |
|  |  |

| Q.27 | The IUCN Red List is based on a set of criteria to evaluate species vulnerability to <br> extinction. Which one or more of the options is/are used as criteria? |
| :--- | :--- |
| (A) | Absolute population size |
| (B) | Geographic range |
| (C) | Economic value |
| (D) | Change in population size over time |
| Q.28 | Which one or more of the following processes contribute(s) substantially to <br> increased mean global temperatures? |
| (A) | Decreased greenhouse gases in the atmosphere |
| (B) | Increased tropical deforestation |
| (C) | Decreased methane emissions |
| Increased fossil fuel use |  |
|  |  |

| Q.29 | Depending on soil nutrient availability, which one or more of the following <br> interaction(s) can occur between soil mycorrhizal fungi and plants? |
| :--- | :--- |
| (A) | Parasitism |
| (B) | Predation |
| (C) | Mutualism |
| (D) | Commensalism |
| Q.30 | Which one or more of the following is/are characteristic of $r$-selected animals? |
| (D) | They produce a large number of offspring in each reproductive event. |
| (A) | They have a long lifespan. |
| (D) |  |
|  |  |

| Q.31 | Which one or more of the following represent(s) benefits of Batesian mimicry to <br> the mimic? |
| :--- | :--- |
| (A) | Increased toxicity against potential predators |
| (B) | Reduced cooperation |
| (C) | Increased protection from predators without investment in toxicity |
| (D) | Reduced competition |
| Q.32 | Which one or more of the following is/are developmental feature(s) of hatchlings <br> of an altricial bird species? |
| Q.33 | You have a biased coin with the probability of getting a head being 0.6. The <br> probability of getting at least 1 head in 3 tosses is <br> (Rounded off to three decimal places) |
| (A) | Eyes open |
| (B) | Eyes closed |
| (C) | Down feathers present |
| Down feathers absent |  |
|  |  |

\(\left.$$
\begin{array}{|l|l|}\hline \text { Q.34 } & \begin{array}{l}\text { A lake has } 20 \text { blue male, } 30 \text { red male, } 60 \text { blue female and } 80 \text { red female fish. A } \\
\text { researcher catches one individual at random from the lake. If the caught fish is } \\
\text { blue, the probability that it is female is } \\
\text { (Rounded off to two decimal places) }\end{array} \\
\hline \text { Q.35 } & \begin{array}{l}\text { A researcher fitted a function to data on how foraging rate }(F, \text { number of items } \\
\text { consumed per 10 minutes) of a shorebird varied with its group size }(G, \text { number of } \\
\text { individuals) and obtained the following equation: }\end{array}
$$ <br>

\log _{e} F=3-0.2 \times \log _{e} G\end{array}\right]\)| According to this equation, the foraging rate $(F)$ of a solitary forager is |
| :--- |
| items per 10 minutes. |
| (Rounded off to the nearest integer $)$ |

## Q. 36 - Q. 65 Carry TWO marks Each

| Q. 36 | Two species of birds, $A$ and $B$, are found together in region $X$. Only species $A$ is present in region Y. Both species produce species-specific alarm calls in response to a predator P . A researcher conducts experiments where she plays recorded calls of both species to species A in regions X and Y . The response of species A to the recorded calls are summarized in the table below. |  |  |
| :---: | :---: | :---: | :---: |
|  | Call stimulus | Response in region $\mathbf{X}$ | Response in region Y |
|  | Alarm call of species A | Species A flies for cover | Species A flies for cover |
|  | Alarm call of species B | Species A flies for cover | Species A does not respond |
|  | Based on the results, the most appropriate inference is that |  |  |
| (A) | species A's response to species B's alarm call is a learned behavior. |  |  |
| (B) | species A's response to species B's alarm call is an innate behavior. |  |  |
| (C) | predator P is absent in region Y . |  |  |
| (D) | predator P exclusively preys on species B . |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

| Q.37 | The table below lists different insects and taxonomic orders. Choose the option <br> that matches the animal to its correct taxonomic order. |  |
| :--- | :--- | :--- |
|  |  | Animal Taxonomic order <br>   <br>  Q) True bugs <br>  R) Crickets <br>   |
|  |  | S) Beetles |

| Q.38 | Islands I, II, and III lie off a mainland coast. Which one of the following <br> statements about species richness is consistent with the theory of island <br> biogeography? |
| :--- | :--- |
|  |  |
| (A) | Island II has the highest species richness because it has the lowest area. |
| (B) | Island III has the highest species richness because it is large and farthest from the <br> mainland. |
| (C) | Island I has the highest species richness because it is large and closest to the <br> mainland. |
| (D) | Islands I and III have equally high species richness because they have roughly the <br> same area. |

| Q.39 | In a polygynous hummingbird species, males defend and monopolize nectar-rich <br> plants (resource). Females visit these plants for nectar and the defending male will <br> have access to all visiting females for mating. Under which scenario is polygyny <br> expected to be the highest? |
| :--- | :--- |
| (A) | Resources are abundant and evenly distributed. |
| (B) | Resources are abundant and clumped. |
| (C) | Resources are scarce and evenly distributed. |
| (D) | Resources are scarce and randomly distributed. |
|  |  |

| Q. 40 | A researcher estimates the relationship between reproductive success ( $N$, number of offspring) and horn length ( $H$, in cm ) in a wild goat as $N=40-2.2 H+0.04 H^{2}$ <br> Horn length typically varies from 10 cm to 50 cm in this species. Which one of the following graphs correctly represents this relationship? |
| :---: | :---: |
|  |  |
| (A) | P |
| (B) | Q |
| (C) | R |
| (D) | S |
|  |  |

| Q.41 | Overfishing reduced food availability for sea lions in California, causing a decline <br> in their population size. In 1972, under the US Endangered Species Act, fishing <br> was banned from sea lion foraging areas. Subsequently, the population of sea lions <br> increased in a logistic form as shown in the figure. |
| :--- | :--- | :--- |

| Q.42 | A locus at Hardy-Weinberg equilibrium in a diploid organism has $n$ alleles. The <br> maximum heterozygosity (i.e., proportion of heterozygotes) for this locus is |
| :--- | :--- |
| (A) | $n$ |
| (B) | $1 / n$ |
| (C) | $1-(1 / n)$ |
| (D) | $1-n$ |

| Q.44 | The production of anthocyanin pigments in pea flowers requires the presence of <br> at least one dominant allele in each of two independently assorting genes, C and P. <br> The presence of anthocyanin results in purple flowers, whereas its absence gives <br> white flowers. A cross between two double heterozygous (CcPp) plants is <br> performed. What is the expected ratio of plants with purple flowers to plants with <br> white flowers? |
| :--- | :--- |
| (A) | $1: 3$ |
| (B) | $3: 1$ |
| (C) | $5: 3$ |
| (D) | $9: 7$ |
|  |  |

| Q.45 | In the phylogenetic trees shown, the tips represent different species of geckos <br> (labeled A to E) and the areas to which they belong. Which one of these is most <br> consistent with the hypothesis that the geckos colonized the Western Ghats from <br> Northeast India through the Eastern Ghats? |
| :--- | :--- | :--- | :--- |
| (A) |  |
| (D) |  |

| Q.46 | The phylogenetic tree depicts the relationship between 5 species of snakes <br> (labelled A to E) and provides information about their habitat specialization. <br> Given the principle of parsimony (least number of evolutionary changes required) <br> and that ancestor Y was terrestrial, which one of the options given is correct? |
| :--- | :--- |
| (A) | X was more likely to be aquatic than terrestrial. |
| (B) | X was more likely to be terrestrial than aquatic. |
| (C) | X was equally likely to be aquatic or terrestrial. |
| (D) | X (Aquatic) |

| Q.47 | The mode of speciation in snakes in the Western Ghats is predominantly allopatric. <br> A researcher wants to quantify diversification of snakes in this range. From the <br> options given, choose the most cost and time efficient way to sample snakes. |
| :--- | :--- |
| (A) | Across an elevational gradient |
| (B) | Across barriers such as valleys and rivers |
| (C) | Intensively in one or two random locations |
| (D) | Intensively across the entire mountain range |
| Q.48 | All else being equal, which one of the following population sizes $(N)$ and <br> migration rates $(m)$ would result in the most genetic differentiation between <br> populations $\left(F_{s t}\right) ?$ <br> Note that $F_{s t}$ is computed as <br> (A) <br> (B) <br> $N=500, m=1$ <br> (C) <br> $N=40, m=10$ |
|  | $N=200, m=1$ |

| Q.49 | Which one or more of the following is/are prediction(s) or assumption(s) of the <br> handicap principle for the evolution of sexual signals? |
| :--- | :--- |
| (A) | Females prefer costly signals. |
| (B) | Honest signals are costly to produce. |
| (C) | Males displaying costly signals are not chosen by females. |
| (D) | Costly signals are reliable indicators of signaller quality. |
|  |  |

| Q.50 | A research team assesses the impact of the invasive species Lantana camara on the <br> seed set of a native flowering plant S. The plant S usually grows in clumps with <br> other individuals of the same or different flowering species. They measure the seed <br> set of flowering individuals of S grown (i) alone; (ii) with a conspecific (same <br> species); (iii) with a native species Q; (iv) with a native species R; (v) with <br> Lantana camara. The figure below shows the mean seed set with 95\% confidence <br> intervals for the different treatments. |
| :--- | :--- |
|  |  |
|  |  |

| Q. 51 | There are two palatable prey species, Q and R , for an insectivorous bird species in a forest. However, the bird searches for and consumes only species Q . According to optimal foraging theory, which one or more of the following conditions can explain the bird choosing to forage only for Q ? |
| :---: | :---: |
|  |  |
| (A) | The handling time for Q > the handling time of R |
| (B) | The handling time for Q < the handling time of R |
| (C) | The relative abundance of $\mathrm{Q}>$ the relative abundance of R |
| (D) | The relative abundance of Q < the relative abundance of R |
| Q. 52 | Conservation biologists have debated whether protected areas should be designed as a single large patch or as several small patches. Assuming that the total area is the same for the two designs, which one or more of the options describe(s) the conservation benefit(s) of several small patches? |
| (A) | Lower rates of local extinction |
| (B) | Lower rates of diversification |
| (C) | Lower spread of disease across the populations |
| (D) | Lower population sizes |
|  |  |

| Q.53 | Which one or more options is/are example(s) of niche partitioning between <br> species? |
| :--- | :--- |
| (A) | Temporal separation of activity |
| (B) | Diet specialization |
| (C) | Hybridization |
| (D) | Vertical stratification of foraging heights |
| Q.54 | In an assemblage of coexisting wild cat species, the size of canine teeth was found <br> to be strikingly different between these species. Which one or more of the <br> following statements explain(s) this observation? |
| (D) | Differences in the size of canine teeth were driven by past competition. |
| (A) | Differences in the size of canine teeth were driven by the size of prey captured by <br> the different species. |
| (C) | Differences in the size of canine teeth are an example of convergent evolution. |
| (Des in the size of canine teeth are an example of divergent evolution. |  |
|  | Dife\| |
|  |  |

| Q.55 | The Biological Species Concept (BSC) states that 'species are groups of <br> interbreeding natural populations that are reproductively isolated from other such <br> groups'. Which one or more of the options could pose challenges for defining <br> species using the BSC? |
| :--- | :--- |
| (A) | Fertile interspecies hybrids |
| (B) | Extinct fossil species |
| (C) | Barriers to gene flow |
| (D) | Inbreeding depression |
|  |  |

| Q. 56 | The barnacle species, Chthamalus stellatus (CS), is found only in the high intertidal zone whereas Balanus glandula (BG) is found only in the low intertidal zone. A researcher transplanted CS from the high to low (T-CS), and BG from the low to high (T-BG) intertidal zones. Additionally, they allowed the species to grow alone or in competition with each other, and quantified survival. <br> Which one or more of the following inferences is/are consistent with the experimental results shown below? |
| :---: | :---: |
|  | SPECIES GROWN ALONE <br> BOTH SPECIES TOGETHER |
| (A) | Only abiotic conditions increase mortality of BG in the high intertidal zones. |
| (B) | Only abiotic conditions increase mortality of CS in the low intertidal zones. |
| (C) | Interspecific competition increases mortality of BG in the high intertidal zone. |
| (D) | Interspecific competition increases mortality of CS in the low intertidal zone. |
|  |  |

| Q. 57 | In the figure below, ellipse X represents the combinations of salt concentrations <br> and temperatures that a marine invertebrate species can tolerate. Ellipse Y <br> represents the combinations of salt concentrations and temperatures that this <br> species is actually found in. |
| :--- | :--- |
|  | Which one or more of the following statements about X and Y is/are correct? |

| Q.58 | A butterfly species inhabits four types of patchy landscapes (P, Q, R, S). Grey <br> shapes represent occupied habitat and white shapes are unoccupied. Arrows <br> represent the occurrence and directions of possible dispersal. |
| :--- | :--- |
| (A) | In landscape Q, patch w is a source population. |
| (B) | Landscape R represents a metapopulation. |
| (C) | Landscape P has the highest extinction rate. |
| Landscape S has the highest level of inbreeding. |  |
|  |  |

| Q.59 | A new food requesting behaviour has been observed in bonnet macaques in <br> Bandipur National Park. The macaques extend their hand and make a cooing sound <br> only towards humans, which effectively results in food given to them. If this <br> behaviour is to increase in frequency in the population over time by the process of <br> natural selection, which one or more of the options below is/are necessary <br> condition(s)? |
| :--- | :--- |
| (A) | Food requesting behaviour must be transmitted from one generation to the next. |
| (B) | All bonnet macaques in the area must show this behaviour. |
| (C) | Macaques who receive food using this behaviour are able to have more offspring. |
| (D) | Food requesting behaviour must only be taught by parents to offspring. |
|  |  |

| Q. 60 | Two co-occurring plant species, A and B, flower at the same time. They are visited <br> by the same pollinator species. If these plants are pollinator-limited, then which <br> one or more of the following statements is/are correct with regard to the figure <br> shown below? |
| :--- | :--- |
| (A) | Line 1 represents competition. |
| (B) | Line 2 represents mutualism. |
| (C) | Line 3 represents parasitism. |
| (D) | Line 1 represents facilitation. |
|  |  |

| Q. 61 | Scorpions on the sand dunes in Syria in September 2022 have the age distribution as shown in Figure P. Scorpions can live to a maximum of 90 days. In all the figure panels, the x -axis represents age class and the y -axis represents number of individuals. <br> Assuming no immigration or emigration, which one or more of the age distribution panels Q, R, S, T is/are possible 30 days later? |
| :---: | :---: |
|  |     |
| (A) | Q |
| (B) | R |
| (C) | S |
| (D) | T |
|  |  |

## END OF QUESTION PAPER
