## General Aptitude (GA)

## Q. 1 - Q. 5 Carry ONE mark Each

| Q.1 | "You are delaying the completion of the task. Send ____ contributions at the <br> earliest." |
| :--- | :--- |
| (A) | you are |
| (B) | your |
| (C) | you're |
| (D) | yore |
|  |  |

| Q.2 | References $: \ldots$ <br> (By word meaning) |
| :--- | :--- |
|  |  |
| (A) | Sight |
| (B) | Site |
| (C) | Cite |
| (D) | Plagiarise |
|  |  |

| Q.3 | In the given figure, PQRS is a parallelogram with $\mathrm{PS}=7 \mathrm{~cm}, \mathrm{PT}=4 \mathrm{~cm}$ and <br> $\mathrm{PV}=5 \mathrm{~cm}$. What is the length of RS in cm ? (The diagram is representative.) |
| :--- | :--- |
|  |  |
| (A) | $\frac{20}{7}$ |
| (B) | $\frac{28}{5}$ |
| (C) | $\frac{9}{2}$ |
| (D) | $\frac{35}{4}$ |

| Q.4 | In 2022, June Huh was awarded the Fields medal, which is the highest prize in <br> Mathematics. <br> When he was younger, he was also a poet. He did not win any medals in the <br> International Mathematics Olympiads. He dropped out of college. <br> Based only on the above information, which one of the following statements can be <br> logically inferred with certainty? |
| :--- | :--- |
| (A) | Every Fields medalist has won a medal in an International Mathematics Olympiad. |$|$| (B) | Everyone who has dropped out of college has won the Fields medal. |
| :--- | :--- |
| (C) | All Fields medalists are part-time poets. |
| (D) | Some Fields medalists have dropped out of college. |
|  |  |

| Q.5 | A line of symmetry is defined as a line that divides a figure into two parts in a way <br> such that each part is a mirror image of the other part about that line. <br> The given figure consists of 16 unit squares arranged as shown. In addition to the <br> three black squares, what is the minimum number of squares that must be coloured <br> black, such that both PQ and MN form lines of symmetry? (The figure is <br> representative) |
| :--- | :--- | :--- |
|  |  |
| (A) | 3 |
| (B) | 4 |
| (C) | 5 |

## Q. 6 - Q. 10 Carry TWO marks Each

| Q.6 | Human beings are one among many creatures that inhabit an imagined world. In <br> this imagined world, some creatures are cruel. If in this imagined world, it is given <br> that the statement "Some human beings are not cruel creatures" is FALSE, then <br> which of the following set of statement(s) can be logically inferred with certainty? |
| :--- | :--- |
| (i) $\quad$All human beings are cruel creatures. <br> (ii) <br> (iii) <br> (iv) | Some human beings are cruel creatures. <br> Some creatures that are cruel are human beings. |
| (A) | only (i) |
| (B) | only (iii) and (iv) |
| (C) | only (i) and (ii) |
| (D) | (i), (ii) and (iii) |
|  |  |

| Q.7 | To construct a wall, sand and cement are mixed in the ratio of 3:1. The cost of sand <br> and that of cement are in the ratio of 1:2. <br> If the total cost of sand and cement to construct the wall is 1000 rupees, then what <br> is the cost (in rupees) of cement used? |
| :--- | :--- |
|  |  |
| (A) | 400 |
| (B) | 600 |
| (C) | 800 |
| (D) | 200 |

| Q.8 | The World Bank has declared that it does not plan to offer new financing to Sri <br> Lanka, which is battling its worst economic crisis in decades, until the country has <br> an adequate macroeconomic policy framework in place. In a statement, the World <br> Bank said Sri Lanka needed to adopt structural reforms that focus on economic <br> stabilisation and tackle the root causes of its crisis. The latter has starved it of <br> foreign exchange and led to shortages of food, fuel, and medicines. The bank is <br> repurposing resources under existing loans to help alleviate shortages of essential <br> items such as medicine, cooking gas, fertiliser, meals for children, and cash for <br> vulnerable households. <br> Based only on the above passage, which one of the following statements can be <br> inferred with certainty? |
| :--- | :--- |
| (A) | According to the World Bank, the root cause of Sri Lanka's economic crisis is that <br> it does not have enough foreign exchange. |
| (B) | The World Bank has stated that it will advise the Sri Lankan government about how <br> to tackle the root causes of its economic crisis. |
| (C) | According to the World Bank, Sri Lanka does not yet have an adequate <br> macroeconomic policy framework. |
| (D) | The World Bank has stated that it will provide Sri Lanka with additional funds for <br> essentials such as food, fuel, and medicines. |

| Q.9 | The coefficient of $x^{4}$ in the polynomial $(x-1)^{3}(x-2)^{3}$ is equal to $\quad$ |
| :--- | :--- |
|  |  |
| (A) | 33 |
| (B) | -3 |
| (C) | 30 |
| (D) | 21 |

| Q.10 | Which one of the following shapes can be used to tile (completely cover by <br> repeating) a flat plane, extending to infinity in all directions, without leaving any <br> empty spaces in between them? The copies of the shape used to tile are identical <br> and are not allowed to overlap. |
| :--- | :--- |
| (A) | circle |
| (B) | regular octagon |
| (C) | regular pentagon |
| (D) | rhombus |
|  |  |

Geomatics Engineering (GE)

## PART A: Common FOR ALL CANDIDATES

## Q. 11 - Q. 27 Carry ONE mark Each

| Q.11 | An angle was measured with a standard error of 5". How many observations a <br> surveyor needs to take in order to obtain a standard error of 1" for the mean value <br> of this angle? |
| :--- | :--- |
| (A) | 5 |
| (B) | 1 |
| (C) | 10 |
| (D) | 25 |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q.12 | What are the Manhattan and Pythagorean distances (in m), respectively between <br> points A and B in the figure below, where the Euclidean distance between A and C <br> is 4 m, and the Euclidean distance between C and B is 4 m ? All the cells have the <br> same edge lengths. |  |
| :--- | :--- | :--- | :--- |
|  |  |  |

| Q.14 | In active remote sensing of Earth objects from a satellite-borne sensor, the source <br> of the energy used for sensing, lies at the |
| :--- | :--- |
| (A) | satellite |
| (B) | Sun |
| (C) | object being sensed on Earth |
| (D) | ground station |
| Q.15 | For a push-broom sensor, the following details are given: |
| Number of detectors $=3000$ |  |
| Height above the ground $=900$ km |  |
| Swath on the ground $=30$ km |  |
| The spatial resolution of the sensor is |  |
| (A) | 30 |
| (D) | 3 |
| 10 |  |
|  | 270 |

| Q. 16 | To visually distinguish between a river channel and a canal on an image, having similar widths and located in the same area, the most important parameter used is $\qquad$ |
| :---: | :---: |
| (A) | size |
| (B) | shape |
| (C) | tone |
| (D) | texture |
| Q. 17 | The unit of spectral radiance is ___ |
| (A) | $W s r^{-1} \mu m^{-1}$ |
| (B) | $W m^{-2} s r^{-1}$ |
| (C) | $W m^{-2}$ |
| (D) | $W m^{-2} s r^{-1} \mu m^{-1}$ |
| Q. 18 | The ratio between the reflected to the incident energy on a surface at a particular wavelength gives the $\qquad$ of the surface. |
| (A) | spectral reflectance |
| (B) | spectral transmittance |
| (C) | spectral radiance |
| (D) | spectral irradiance |

| Q.19 | GNSS stands for Global Navigation Satellite Systems. As of today, which of the <br> following is the complete set of GNSS constellations that cover the entire globe? |
| :--- | :--- |
| (A) | GPS, GLONASS, Galileo, BeiDou, IRNSS, QZSS |
| (B) | GPS, GLONASS, Galileo, BeiDou, IRNSS, QZSS, GAGAN, WAAS, EGNOS |
| (C) | GPS, GLONASS, Galileo |
| (D) | GPS, GLONASS, Galileo, BeiDou |
| Q.20 | The basic premise for using the DGPS technique is to reduce the errors due to |
| (A) | atmosphere, satellite orbit, multipath |
| (B) | atmosphere, satellite orbit, satellite clock |
| (D) | semi-major axis, inclination and eccentricity |
| (C) | atmosphere, satellite clock, receiver clock |
| (D) | atmosphere, satellite orbit, satellite clock, receiver clock, multipath |
| (B) | eccentricity |
| The orbital period of GPS satellites is determined by the |  |
| of their orbits. |  |
| semi-major axis |  |
|  |  |

Geomatics Engineering (GE)

| Q.22 | Which vector data analysis tool combines geometries and attributes from different <br> layers? |
| :--- | :--- |
| (A) | Overlay |
| (B) | Map Manipulation |
| (C) | Buffer |
| (D) | Cartesian distance measurement |
| Q.23 | A GIS analyst has two raster datasets with the same number of rows and columns. <br> The analyst computes the average of the two input raster layers to generate a new <br> raster layer with the same size as the input raster layers. What type of raster data <br> analysis operation is performed? |
| (A) | Local |
| (B) | Neighborhood |
| (C) | Zonal |
| (D) | Global |
|  |  |

| Q. 24 | Match the following errors (Column 1) in spatial data digitization with their descriptions (Column 2). <br> Column 1 <br> (P) Mis-located entities <br> (Q) Missing labels <br> (R) Artefacts of digitization <br> (S) Duplicate labels <br> (T) Duplicate entities <br> Column 2 <br> 1) Points, lines or boundary segments digitized twice <br> 2) Points, lines or boundary segments digitized in wrong place <br> 3) Undershoots, overshoots, wrongly placed nodes loops or spikes <br> 4) Undefined polygons <br> 5) Two or more identification labels for same polygon |
| :---: | :---: |
| (A) | P-2, Q-4, R-3, S-5, T-1 |
| (B) | P-1, Q-2, R-3, S-5, T-4 |
| (C) | P-2, Q-1, R-4, S-3, T-5 |
| (D) | P-2, Q-4, R-3, S-1, T-5 |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q.25 | Which of the following statement(s) is/are TRUE for the least squares adjustment <br> of observations? |
| :--- | :--- |
| (A) | Observations have a Chi-square distribution |
| (B) | Random errors in the observations are assumed to have a symmetrical distribution |
| (C) | The positive and negative random observation errors are equally likely |
| (D) | The adjusted parameters are independent of a priori reference variance |
| Q.26 | Which of the following statement(s) is/are TRUE for the systematic errors? |
| (A) | These can be corrected by applying a suitable mathematical model |
| (B) | The least squares adjustment automatically removes unmodelled systematic errors |
| (C) | These must be removed while or before applying the least squares adjustment |
| (D) | Removal of gross errors automatically removes systematic errors |

| Q. 27 | In the following figure, A and B are fixed points with known plane rectangular <br> coordinates. C and D are the new points in the control survey whose coordinates are <br> to be determined. For this network, the surveyor has measured all 8 internal angles <br> (1 to 8) and 5 sides $\mathrm{BC}, \mathrm{CD}, \mathrm{DA}, \mathrm{AC}$ and BD . The value of redundancy $(r)$ for the <br> given figure will be equal to <br> (In integer). |
| :--- | :--- |

## Q. 28 - Q. 46 Carry TWO marks Each

| Q. 28 | As shown in the following figure, let $d_{1}, d_{2}, d_{3}$ denote three uncorrelated clockwise directions, observed at point P with equal standard errors for each direction, i.e., $\sigma_{d_{1}}=\sigma_{d_{2}}=\sigma_{d_{3}}= \pm \sqrt{2}$. Let $\alpha_{1}$ and $\alpha_{2}$ be two included angles formed by these three directions. The covariance matrix (in arcsecond ${ }^{2}$ ) for these included angles will be given as: |
| :---: | :---: |
|  |  |
| (A) | $\left[\begin{array}{ll}4 & 2 \\ 2 & 4\end{array}\right]$ |
| (B) | $\left[\begin{array}{cc}4 & -2 \\ -2 & 4\end{array}\right]$ |
| (C) | $\left[\begin{array}{cc}-4 & 2 \\ 2 & -4\end{array}\right]$ |
| (D) | $\left[\begin{array}{cc}4 & 2 \\ -2 & 4\end{array}\right]$ |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q.32 | Which of the following statement(s) is/are CORRECT for sun-synchronous Earth <br> observation satellites? |
| :--- | :--- |
| (A) | They are in near-polar orbit around the Earth |
| (B) | They cross the equator at different longitudes at nearly the same local solar time |
| (C) | They maintain nearly the same sun-target-satellite geometry while crossing the <br> equator at different longitudes |
| (D) | The angle of inclination of their orbit is < 1 degree |
| Q.33 | Which of the following statement(s) is/are CORRECT? |
| (A) | In optical remote sensing, more often we are interested in diffuse reflections |
| (B) | The reflection will be diffuse if the incident wavelength is comparatively much larger <br> than the surface roughness |
| (C) | A surface that reflects microwave in specular manner may reflect the visible in <br> diffuse manner |
| (D) | All wavelengths emitted by the Sun reflect in diffuse manner from the objects on the <br> surface of the Earth |
|  |  |

| Q. 34 | The spectral reflectance curves of three materials (A, B, and C) are shown in the figure below. Also shown are three wavelength bands at X, Y and Z. Which of the following statement(s) is/are CORRECT? |
| :---: | :---: |
|  |  |
| (A) | Each of the curve is the spectral signature of the respective material |
| (B) | A sensor designed for the wavelength band ' $Y$ ' will best distinguish these materials in the image captured by the sensor |
| (C) | A sensor designed for the wavelength band ' $Z$ ' will best distinguish these materials in the image captured by the sensor |
| (D) | These curves are normally produced using a spectro-radiometer |
| Q. 35 | Which of the following statement(s) is/are TRUE? |
| (A) | Topography is an example of continuous spatial feature |
| (B) | Geo-relational data model stores spatial data and attribute data separately |
| (C) | Object based data model stores spatial data and attribute data together |
| (D) | Land surface temperature is an example of discrete spatial feature |
|  |  |

| Q.36 | In the network shown below, after converting it to a topological graph, which of the <br> following statement(s) is/are TRUE? (Assume there are no pseudo-nodes) |
| :--- | :--- |
| Q.37 | Which of the following type(s) of tolerances is/are used in editing GIS data? |
| (A) | The correct number of nodes (or vertices) are 7 |
| (B) | The correct number of edges (or links) are 9 |
| (C) | The total number of regions are 4 |
| (D) | The correct number of edges (or links) are 8 |
| (B) | Wralerance |
| (Deed tolerance |  |

| Q.38 | Choose the CORRECT statement(s) regarding microwave remote sensing. |
| :--- | :--- |
| (A) | Spatial resolution of passive microwave remote sensor is coarser than that of active <br> microwave remote sensor from the same platform |
| (B) | The intensity of signal returned by an object depends on its geometric as well as <br> dielectric properties |
| (C) | It is possible to "see through" the dense forest canopy using X-band active <br> microwave remote sensing (i.e. signals can penetrate the dense forest canopy) |
| (D) | Microwave remote sensing can be used in soil moisture studies |
| Q.39 | Consider the Sun and the Earth as blackbodies at 6000 K and 300 K temperatures, <br> respectively. Which of the following statement(s) is/are INCORRECT? |
| (A) | Sun emits maximum energy at 9.3 $\mu m$ |
| (B) | Sun does not emit energy at microwave |
| (C) | The wavelengths of the energies emitted by the Sun are a sub-set of the wavelengths <br> emitted by the Earth |
| (D) | Earth does not emit energy at green wavelength |
|  |  |

| Q. 43 | A GPS satellite is flying at a distance of $20,000 \mathrm{~km}$ from the observer. The phase of the L 1 carrier ( 1575.42 MHz ) in degrees as received by the observer is $\qquad$ (Rounded off to 2 decimal places). <br> Assume that the signal did not experience any refraction, reflection or other errors and the speed of light to be $c=3 \times 10^{8} \mathrm{~m} / \mathrm{s}$. |
| :---: | :---: |
|  |  |
| Q. 44 | For a profile given in the figure in the form of three steps $\mathrm{A}, \mathrm{B}$ and C , the following information is available: <br> Height of step $\mathrm{A}\left(H_{A}\right)$ with respect to a reference line $=10 \mathrm{~m}$ (known and error free) <br> Difference in height between step A and step B $\left(h_{1}\right)=5 \mathrm{~m} \pm 2 \mathrm{~mm}$ <br> Difference in height between step B and step C $\left(h_{2}\right)=8 \mathrm{~m} \pm 3 \mathrm{~mm}$ <br> $H_{B}$ and $H_{C}$ are the unknown heights of step B and C, respectively. The step B is higher than step C and D. <br> The coefficient of correlation, $\rho_{h_{1} h_{2}}$, between the height differences $=0.25$ <br> The coefficient of correlation between estimated heights of points B and $\mathrm{C}\left(\rho_{H_{B} H_{C}}\right)$ will be $\qquad$ (Rounded off to 2 decimal places). |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

Geomatics Engineering (GE)

PART B: FOR Section I: Surveying and Mapping CANDIDATES ONLY
Q. 47 - Q. 54 Carry ONE mark Each

| Q. 47 | The bearing of the line AB from North is $143^{\circ} 40^{\prime}$ and angle ABC measured in clockwise direction is $309^{\circ} 30^{\prime}$. The bearing of line BC in Quadrantal Bearing System is $\qquad$ . |
| :---: | :---: |
| (A) | $\mathrm{N} 3^{\circ} 10^{\prime} \mathrm{W}$ |
| (B) | N86 ${ }^{\circ} 50^{\prime} \mathrm{E}$ |
| (C) | N86 ${ }^{\circ} 50^{\prime} \mathrm{W}$ |
| (D) | $\mathrm{N} 3^{\circ}{ }^{1} 0^{\prime} \mathrm{E}$ |
| Q. 48 | Which of the following map scale is most suitable for urban planning? |
| (A) | 1:10,000 |
| (B) | 1:25,000 |
| (C) | 1:50,000 |
| (D) | 1:100,000 |
|  |  |
|  |  |
|  |  |
|  |  |

| Q.49 | Which of the following statement is NOT true regarding relief displacement in <br> vertical photographs in the context of aerial photogrammetry? |
| :--- | :--- |
| (A) | Relief displacement is the shift in the photographic position of an object caused by <br> the elevation of the object (above or below the datum) |
| (B) | Relief displacement is always in non-radial direction from the principal point |
| (C) | Relief displacement can cause straight roads (not passing through the ground <br> principal point) to appear crooked in undulating terrain |
| (D) | The magnitude of relief displacement is affected by the flying height of the camera <br> (assuming everything else to be same) |
| Q.50 | A square grid is laid on a flat terrain and is photographed from an aerial camera. <br> The flying height and camera parameters are assumed to be constant. The camera <br> and lens are assumed to be perfect (i.e. free from any distortions). The image of the <br> grid obtained from the camera is shown below. Select the CORRECT statement <br> from the statements given below. |
| (D) | Scale over the given photograph is constant |
| (B) | The given photograph is an oblique photograph |
| (A) | Camera is looking directly downwards (towards nadir) |
|  | Riven photograph is a vertical photograph |

| Q.51 | Which of the following statement is TRUE for the World Geodetic System 1984 <br> (WGS84)? |
| :--- | :--- |
| (A) | The WGS84 ellipsoid best fits the shape of the earth including its topography |
| (B) | The WGS84 ellipsoid and the Geodetic Reference System 1980 (GRS80) ellipsoid <br> are one and the same |
| (C) | The WGS84 ellipsoid is not a geocentric ellipsoid |
| (D) | The WGS84 ellipsoid can be used to determine the geoid |
| Q.52 | Which of the following map(s) is/are published by Survey of India? |
| (A) | Topographical Maps |
| (B) | Geological Maps |
| (C) | Soil Maps |
| (D) | Thematic Maps |
|  |  |
|  |  |

| Q. 53 | Which of the following triangles are well conditioned and may be suitable for control establishment using triangulation? |  |
| :---: | :---: | :---: |
|  | Triangle | Interior Angles |
|  | I | $90^{\circ}, 45^{\circ}, 45^{\circ}$ |
|  | II | $130^{\circ}, 25^{\circ}, 25^{\circ}$ |
|  | III | $110^{\circ}, 35^{\circ}, 35^{\circ}$ |
|  | IV | $110^{\circ}, 45^{\circ}, 25^{\circ}$ |
| (A) | I |  |
| (B) | II |  |
| (C) | III |  |
| (D) | IV |  |
| Q. 54 | An angle angle was offset valu is $\qquad$ | $0^{\circ}$ is to be laid o asured by repeti a distance of 300 m. (Rounded off |

## Q. 55 - Q. 65 Carry TWO marks Each

| Q.56 | Aerial photograph is to be taken from a flying height of 2 km above a flat ground <br> with a camera having a focal length of 200 mm. The image format used is <br> $23 \mathrm{~cm} \times 23 \mathrm{~cm}$. The ground area covered by a single photograph is _ |
| :--- | :--- |
| (A) | 5.29 |
| (B) | 1.48 |
| (C) | 0.95 |
| (D) | 2.22 |
| Q.57 | The scaled and rotated versions of vectors [1, 2] and [-3, 4] are |
| (A) | $[-1,3],[-7,1]$ |
| (B) | $[5,7],[-7,3]$ |
| (C) | $[2,-3],[-7,1]$ |
| (D) | $[2,-3],[-7,3]$ |
|  |  |

| Q.60 | For a constant flying height, the average scale of an aerial photograph depends on <br> which of the following parameter(s)? |
| :--- | :--- |
| (A) | Focal length of the camera |
| (B) | Size of the photograph |
| (C) | Size of the objects in the area |
| (D) | Topography of the ground |
| Q.61 | Which of the following statement(s) is/are CORRECT? |
| (A) | Mean sea level is defined as the long-term mean of the tide gauge measurements at <br> a given location |
| (B) | Mean sea level is the same as the mean tide level |
| (C) | Mean sea level is defined as the monthly mean of the tide gauge measurements |
| (D) | Mean sea level is an approximation of geoid |
|  |  |
|  |  |

| Q. 65 | A perfectly adjusted tachometer is set at a point A having Reduce 80.50 m and the following readings are taken to the staff held at of 80.10 m . |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Instrument at | Staff at | Vertical Circle reading | Stadia | eadings <br> ) |
|  |  |  |  | Upper | Lower |
|  | A | B | $0^{\circ} 0^{\prime} 0^{\prime \prime}$ | 2.20 | 1.80 |

The height of the instrument from the ground above point A is $\qquad$ m (Rounded off to 2 decimal places).

PART B: FOR Section II: Image Processing and Analysis CANDIDATES ONLY
Q. 66 - Q. 73 Carry ONE mark Each

| Q.66 | The purpose of thresholding in supervised classification is |
| :--- | :--- |
| (A) | to reject homogeneous classes |
| (B) | to correct the geometry of the image |
| (C) | to identify image speckle |
| (D) | to identify and reject pixels not belonging to pre-defined training classes |
| Q.67 | The pixel values for a 3 band and 8-bit image are (127, 127, 127). On an RGB <br> colour display, this pixel will appear <br> (A) <br> green <br> (B) <br> black <br> (C) <br> gray <br> (D) <br> white |

| Q.70 | A child travelling in a bus is staring at the wheels of a car. To the child's amusement <br> the car wheels appear to spin backwards, but the car moves forward. This perception <br> is because of the nature of our human visual sensory system, and is attributed to |
| :--- | :--- |
| (A) | aliasing |
| (B) | convolution |
| (C) | filtering |
| (D) | modulation |
| Q.71 | Which one of the following is NOT a linear operation? |
| (A) | Convolution |
| (B) | Moving average |
| (C) | Filtering with a median filter |
| (D) | Similarity transformation |
|  |  |
|  |  |

Geomatics Engineering (GE)

| Q.72 | The minimum number of 2-dimensional ground control points (GCP's) required for <br> second order polynomial mapping for image georeferencing is: |
| :--- | :--- |
| (A) | 4 |
| (B) | 5 |
| (C) | 6 |
| (D) | 7 |
| Q.73 | Consider an across-track multispectral scanner with ground pixel size of <br> 56 m x 79 m in the along-track and across-track directions. Which of the following <br> statement is TRUE? |
| (A) | Aspect ratio distortion of the image will be greater than 1 |
| (B) | Aspect ratio distortion of the image will be less than 1 |
| (C) | There will be no geometric distortion in the image |
| (D) | Aspect ratio distortion is a type of radiometric distortion |
|  |  |

## Q. 74 - Q. 84 Carry TWO marks Each

| Q.75 | Divergence analysis in classification is used: |
| :--- | :--- |
| (A) | to decorrelate a given set of bands used in classification |
| (B) | to logically smooth the classified image |
| (C) | to segregate mixed and homogeneous pixels |
| (D) | to evaluate statistical separability amongst class pairs |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q. 76 | Consider the histogram of an 8-bit image given below at (1). A piece-wise linear contrast stretch given at (2) is applied on the said image. The minimum and maximum pixel values of the image obtained after applying the given contrast stretch are $\qquad$ (minimum value) and $\qquad$ (maximum value), respectively. |
| :---: | :---: |
|  |   <br> Histogram of the given image (1) <br> Piece-wise linear contrast stretch (2) |
| (A) | 17, 176 |
| (B) | 17,120 |
| (C) | 20,176 |
| (D) | 20, 120 |
|  |  |
|  |  |
|  |  |
|  |  |
|  |  |

| Q. 77 | The variance-covariance matrix for a 3-band image is given below (in the sequence of bands 1, 2 and 3). Which of the statement(s) is/are CORRECT? |
| :---: | :---: |
|  | $\left[\begin{array}{ccc}9 & 2 & 4 \\ 2 & 9 & -3 \\ 4 & -3 & 9\end{array}\right]$ |
| (A) | The standard deviation of all bands is the same |
| (B) | The bands 1 and 2 are positively correlated |
| (C) | The bands 2 and 3 are positively correlated |
| (D) | A line fitted to the scattergram between band 1 and band 3 will have a positive slope |
| Q. 78 | Which of the following statement(s) is/are TRUE regarding color theory: |
| (A) | Subtractive color theory is used for color printing |
| (B) | Additive color theory is used to display images on a color television screen |
| (C) | White light projected on a translucent filter made of yellow dye would subtract the blue light |
| (D) | White light projected on a translucent filter made of cyan dye would subtract the green light |
|  |  |
|  |  |
|  |  |
|  |  |

| Q. 79 | Pixel ( $\mathrm{x}, \mathrm{y}$ ) indicates a pixel at location x , y in the image coordinate system. Which of the following statement(s) is/are CORRECT? |
| :---: | :---: |
| (A) | Pixels $(x+1, y)$ and $(x, y+1)$ are the adjacent horizontal and vertical neighbors of pixel ( $\mathrm{x}, \mathrm{y}$ ), respectively |
| (B) | The digital number at pixel ( $\mathrm{x}, \mathrm{y}$ ) will always be the average of the digital numbers of pixels $(x-1, y)$ and $(x+1, y)$ |
| (C) | Pixel ( $\mathrm{x}-1, \mathrm{y}-1)$ is not an adjacent neighbor of pixel ( $\mathrm{x}+1, \mathrm{y}+1)$ |
| (D) | Pixel ( $\mathrm{x}, \mathrm{y}$ ) has only four diagonal adjacent neighbors |
| Q. 80 | Which of the following statement(s) is/are CORRECT in the context of image enhancement? |
| (A) | Histogram equalization carries out a contrast stretch such that output values are displayed on the basis of their frequency of occurrence |
| (B) | Compared to a linear contrast stretch, histogram equalization is computationally more expensive |
| (C) | Both histogram equalization and linear contrast stretch are neighborhood operators |
| (D) | Histogram equalization and linear contrast stretch will produce identical results if the histogram of the input image is uniform |
| Q. 81 | The value of the convolution of $f(x)=3 \cos 2 x$ and $g(x)=\frac{1}{3} \sin 2 x$ where $x \in[0,2 \pi)$, at $x=\frac{\pi}{3}$, is $\qquad$ (Rounded off to 2 decimal places). |
|  |  |
|  |  |

| Q. 82 | A sensor converts the influx of light linearly to digital code through voltage changes. <br> The sensor has a voltage range of $0-5 \mathrm{~V}$ and the maximum number of codes that it <br> can quantize the voltage change is 2048. The bit-size of the quantizer is <br> Q. In integers). |
| :--- | :--- |
|  | The following digital numbers are given for a pixel of multispectral sensor. The <br> NDWI (normalized difference water index) for this pixel is <br> (Rounded off to 1 decimal place). <br> Blue $=136$ <br> Green $=200$ <br> Red $=245$ <br> NIR $=150$ |
| TIR $=50$ |  |

## END OF QUESTION PAPER
