## General Aptitude (GA)

## Q. 1 - Q. 5 Carry ONE mark Each

| Q. 1 | "You are delaying the completion of the task. Send ____ contributions at the <br> earliest." |
| :--- | :--- |
| (A) | you are |
| (B) | your |
| (C) | you're |
| (D) | yore |
|  |  |

| Q.2 | References :___ : : Guidelines : Implement <br> (By word meaning) |
| :--- | :--- |
|  |  |
| (A) | Sight |
| (B) | Site |
| (C) | Cite |
| (D) | Plagiarise |
|  |  |

| Q.3 | In the given figure, PQRS is a parallelogram with $\mathrm{PS}=7 \mathrm{~cm}, \mathrm{PT}=4 \mathrm{~cm}$ and <br> $\mathrm{PV}=5 \mathrm{~cm}$. What is the length of RS in cm ? (The diagram is representative.) |
| :--- | :--- |
|  |  |
| (A) | $\frac{20}{7}$ |
| (B) | $\frac{28}{5}$ |
| (C) | $\frac{9}{2}$ |
| (D) | $\frac{35}{4}$ |

| Q.4 | In 2022, June Huh was awarded the Fields medal, which is the highest prize in <br> Mathematics. <br> When he was younger, he was also a poet. He did not win any medals in the <br> International Mathematics Olympiads. He dropped out of college. <br> Based only on the above information, which one of the following statements can be <br> logically inferred with certainty? |
| :--- | :--- |
| (A) | Every Fields medalist has won a medal in an International Mathematics Olympiad. |$|$| (B) | Everyone who has dropped out of college has won the Fields medal. |
| :--- | :--- |
| (C) | All Fields medalists are part-time poets. |
| (D) | Some Fields medalists have dropped out of college. |
|  |  |

| Q.5 | A line of symmetry is defined as a line that divides a figure into two parts in a way <br> such that each part is a mirror image of the other part about that line. <br> The given figure consists of 16 unit squares arranged as shown. In addition to the <br> three black squares, what is the minimum number of squares that must be coloured <br> black, such that both PQ and MN form lines of symmetry? (The figure is <br> representative) |
| :--- | :--- | :--- |
|  |  |
| (A) | 3 |
| (B) | 4 |
| (C) | 5 |

## Q. 6 - Q. 10 Carry TWO marks Each

| Q.6 | Human beings are one among many creatures that inhabit an imagined world. In <br> this imagined world, some creatures are cruel. If in this imagined world, it is given <br> that the statement "Some human beings are not cruel creatures" is FALSE, then <br> which of the following set of statement(s) can be logically inferred with certainty? <br> (i) |
| :--- | :--- |
| (ii) All human beings are cruel creatures.  <br> (iii) Some human beings are cruel creatures. <br> (iv)  <br> Some creatures that are cruel are human beings.  |  |
| (A) | only (i) |
| (B) | only (iii) and (iv) |
| (C) | only (i) and (ii) |
| (D) | (i), (ii) and (iii) |
|  |  |

| Q.7 | To construct a wall, sand and cement are mixed in the ratio of 3:1. The cost of sand <br> and that of cement are in the ratio of 1:2. <br> If the total cost of sand and cement to construct the wall is 1000 rupees, then what <br> is the cost (in rupees) of cement used? |
| :--- | :--- |
|  |  |
| (A) | 400 |
| (B) | 600 |
| (C) | 800 |
| (D) | 200 |

| Q.8 | The World Bank has declared that it does not plan to offer new financing to Sri <br> Lanka, which is battling its worst economic crisis in decades, until the country has <br> an adequate macroeconomic policy framework in place. In a statement, the World <br> Bank said Sri Lanka needed to adopt structural reforms that focus on economic <br> stabilisation and tackle the root causes of its crisis. The latter has starved it of <br> foreign exchange and led to shortages of food, fuel, and medicines. The bank is <br> repurposing resources under existing loans to help alleviate shortages of essential <br> items such as medicine, cooking gas, fertiliser, meals for children, and cash for <br> vulnerable households. <br> Based only on the above passage, which one of the following statements can be <br> inferred with certainty? |
| :--- | :--- |
| (A) | According to the World Bank, the root cause of Sri Lanka's economic crisis is that <br> it does not have enough foreign exchange. |
| (B) | The World Bank has stated that it will advise the Sri Lankan government about how <br> to tackle the root causes of its economic crisis. |
| (C) | According to the World Bank, Sri Lanka does not yet have an adequate <br> macroeconomic policy framework. |
| (D) | The World Bank has stated that it will provide Sri Lanka with additional funds for <br> essentials such as food, fuel, and medicines. |

| Q. 9 | The coefficient of $x^{4}$ in the polynomial $(x-1)^{3}(x-2)^{3}$ is equal to $\quad \_.$ |
| :--- | :--- |
|  |  |
| (A) | 33 |
| (B) | -3 |
| (C) | 30 |
| (D) | 21 |

| Q.10 | Which one of the following shapes can be used to tile (completely cover by <br> repeating) a flat plane, extending to infinity in all directions, without leaving any <br> empty spaces in between them? The copies of the shape used to tile are identical <br> and are not allowed to overlap. |
| :--- | :--- |
| (A) | circle |
| (B) | regular octagon |
| (C) | regular pentagon |
| (D) | rhombus |
|  |  |

## Q. 11 - Q. 35 Carry ONE mark Each

| Q.11 | Consider the function $z=\tan ^{-1}\left(\frac{x}{y}\right)$, where $x=u \sin v$ and $y=u \cos v$. <br> The partial derivative, $\frac{\partial z}{\partial v}$ is <br> (A) <br> (B) <br> (C) <br> (D) |
| ---: | :--- |

| Q.12 | Consider the function $z=x^{3}-2 x^{2} y+x y^{2}+1$. The directional derivative of <br> $z$ at the point $(1,2)$ along the direction $3 \hat{\imath}+4 \hat{\jmath}$ is |
| ---: | :--- |
| (A) | 0 |
| (B) | -1 |
| (C) | 1 |
| (D) | -2 |

| Q.13 | The vapor quality of steam in the turbine of a Rankine cycle can be improved by <br> employing |
| ---: | :--- |
| (A) | regeneration of steam |
| (B) | intercooler |
| (C) | reheating |
| (D) | cogeneration |
|  |  |

| Q. 14 | In the following "GZ (righting lever arm)" versus "angle of heel" curve, the point <br> ' X ' indicates |
| :--- | :--- |
|  |  |
| (A) | angle of loll |
| (B) | angle of vanishing stability |
| (C) | deck edge immersion angle |
| trim angle |  |
| (Angle of heel) |  |

| Q.15 | Comparing a catamaran (with a separation between demi-hulls) and a mono-hull <br> craft of the same displacement and water plane area, the initial metacentric radius <br> of the catamaran will be |
| ---: | :--- |
| (A) | same as that of the mono-hull |
| (B) | one-half of the mono-hull |
| (C) | greater than that of the mono-hull |
| (D) | one-third of the mono-hull |

| Q. 16 | The time series of rudder angle ( $\delta$ ) and heading angle ( $\psi$ ) during a ship's maneuver are shown in the following figure. Identify the maneuver and the associated parameters ( $\mathrm{p}, \mathrm{q}, \mathrm{r}$ and s ) |
| :---: | :---: |
|  |  |
| (A) | turning maneuver <br> p : heading angle, q : rudder angle, r: $1^{\text {st }}$ overshoot angle, $\mathrm{s}: 2^{\text {nd }}$ overshoot angle |
| (B) | spiral maneuver <br> p : heading angle, q : rudder angle, r: $1^{\text {st }}$ overshoot angle, $\mathrm{s}: 2^{\text {nd }}$ overshoot angle |
| (C) | zig-zag maneuver <br> p : rudder angle, $\mathrm{q}:$ heading angle, $\mathrm{r}: 1^{\text {st }}$ overshoot angle, $\mathrm{s}: 2^{\text {nd }}$ overshoot angle |
| (D) | zig-zag maneuver <br> p : heading angle, q : rudder angle, r: $1^{\text {st }}$ overshoot angle, $\mathrm{s}: 2^{\text {nd }}$ overshoot angle |

| Q.17 | A closed system undergoing a thermodynamic cycle consisting of two reversible <br> isothermal and two reversible adiabatic processes is shown in the following <br> figure. If $\delta Q$ is the infinitesimal heat transfer and T is the instantaneous <br> temperature, then the value of the contour integral $\oint \frac{\delta Q}{\mathrm{~T}}$ |
| :--- | :--- |
| (A) | is positive |
| (B) | is negative |
| (C) | is zero |
| (D) |  |

| Q.18 | In a marine steam power cycle employing regeneration, the feed water heater for <br> waste heat recovery is placed after the |
| ---: | :--- |
| (A) | boiler |
| (B) | turbine |
| (C) | condenser |
| (D) | pump |
| Q.19 | From the following, choose the offshore platform that can be used ONLY for |
| offshore drilling purpose. |  |
| (B) | Jackup platform |
| (C) | Tension leg platform |
|  | Jacket platform |

| Q.20 | Which method among the following is based on the strain energy principle? |
| ---: | :--- |
| (A) | Conjugate beam method |
| (B) | Castigliano's method |
| (C) | Slope-deflection method |
| (D) | Moment distribution method |
| Q.21 | In dimensional analysis, according to Buckingham's $\pi$-theorem, if $n$ is the total <br> number of variables and $m$ is the number of independent dimensions, then the <br> maximum number of independent dimensionless $\pi$-groups will be <br> (D) <br> (B) <br> (A) |
| $m-n$ |  |
|  | $m+n$ |

| Q.22 | A submerged cylinder of diameter 1 m is rotating clockwise at 100 rpm , in a flow <br> with a free stream velocity of $10 \mathrm{~m} / \mathrm{s}$. Assuming ideal flow, the number of <br> stagnation points on the cylinder is |
| ---: | :--- |
| (A) | 2 |
| (B) | 3 |
| (C) | 1 |
| (D) | 0 |

| Q. 23 | The buoyancy curve variation of a ship floating in still water and in waves is shown in the following figure. The total area under each curve is the same. The cases ' X ' and ' Y ' correspond to |
| :---: | :---: |
|  |  |
| (A) | X : wave crest is amidships, Y : wave crest is amidships |
| (B) | X : wave trough is amidships, Y: wave trough is amidships |
| (C) | X : wave trough is amidships, Y : wave crest is amidships |
| (D) | X : wave crest is amidships, Y: wave trough is amidships |

| Q.24 | Let $X$ be any random variable and $Y=-2 X+3$. |
| ---: | :--- |
|  | If $E[Y]=1$ and $E\left[Y^{2}\right]=9$, then which of the following are TRUE? |
| (A) | $E[X]=1$ |
| (B) | $E[X]=-2$ |
| (C) | $\operatorname{Var}(X)=1$ |
| (D) | $\operatorname{Var}(X)=2$ |
| Q.25 | $\operatorname{Res}[f, 2]=-1$ |
| (D) | $\operatorname{Res}[f,-2]=-1 / 12$ |
| (A) | $\operatorname{Res}[f, 0]=-1 / 4$ |
| (B) | $\operatorname{Res}[f, 1]=1 / 3$ |
|  | in the counterclockwise direction. If $\operatorname{Res}\left[f, z_{0}\right]$ denotes the residue of $f(z)$ at the |
| point $z_{0}$, then which of the following are TRUE? |  |

| Q.26 | A stationary ship has longitudinal symmetry. The surge, sway and heave motions <br> are represented by indices 1-2 -3, respectively and roll, pitch and yaw motions are <br> represented by indices 4-5-6, respectively. Which of the following are TRUE <br> about the added mass $\left(\mathrm{A}_{\mathrm{ij}}\right) ?$ |
| ---: | :--- |
| (A) | $\mathrm{A}_{35}=\mathrm{A}_{53}$ |
| (B) | $\mathrm{A}_{62}=\mathrm{A}_{26}$ |
| (C) | $\mathrm{A}_{46}=\mathrm{A}_{64}$ |
| (D) | $\mathrm{A}_{33}=\mathrm{A}_{55}$ |

| Q.27 | The failure modes that may be observed in a riveted joint to fasten two plate <br> members, subjected to shear load are |
| ---: | :--- |
| (A) | bending of the rivet |
| (B) | shearing of the rivet |
| (C) | tensile failure of a plate member |
| (D) | tensile failure of the rivet |

| Q.28 | A rectangular barge is freely floating in a drydock as shown in the following <br> figure. For longitudinal strength analysis which of the following are TRUE? |
| ---: | :--- |
| (A) | The barge is considered as a free-free beam |
| (B) | At aft and forward ends: shear force $=0$, bending moment $=0$ |

| Q. 30 | A piezometer and a pitot tube measure the static and the total pressure of a fluid in a pipe flow respectively. The piezometer reads 100 kPa and the pitot tube shows 200 kPa . The density of the fluid is $1000 \mathrm{~kg} / \mathrm{m}^{3}$. The velocity of the flow is $\qquad$ $\mathrm{m} / \mathrm{s}$ (round off to one decimal place) |
| :---: | :---: |
|  |  |
| Q. 31 | A Carnot heat engine operates between two reservoirs of temperatures $900^{\circ} \mathrm{C}$ $\left(\mathrm{T}_{\mathrm{H}}\right)$ and $30^{\circ} \mathrm{C}\left(\mathrm{T}_{\mathrm{L}}\right)$. If the heat transferred during one cycle to the engine from $\mathrm{T}_{\mathrm{H}}$ is 150 kJ , then the energy rejected to $\mathrm{T}_{\mathrm{L}}$ is $\qquad$ kJ (round off to the nearest integer) |
|  |  |
| Q. 32 | An oil tanker of breadth 20 m and having a displacement of 24000 tonnes in sea water (density of sea water $=1025 \mathrm{~kg} / \mathrm{m}^{3}$ ) is carrying oil of relative density 0.8 in 9 longitudinally distributed tanks which are all half-filled. Each longitudinal tank is 12 m long and 16 m wide. The apparent change in vertical center of gravity, due to the presence of oil in the tanks is $\qquad$ m (round off to one decimal place) |
| Q. 33 | For a regular sinusoidal wave propagating in deep water having wave height of 3.5 m and wave period of 9 s , the wave steepness is $\qquad$ (round off to three decimal places) |
|  |  |

| Q.34 | A solid cantilever shaft of diameter 0.1 m and length 2 m is subjected to a torque <br> of $10 \mathrm{kN}-\mathrm{m}$ at the free end (shear modulus is 82 GPa ). The maximum induced <br> shear stress is__ $\mathrm{N} / \mathrm{mm}^{2}$ (round off to the nearest integer). |
| :--- | :--- |
| Q.35 | If a random variable $X$ has the probability density function |
| $\qquad$$f(x)=\left\{\begin{array}{cc}\frac{5}{32} x^{4} & \text { if } 0 \leq x \leq 2 \\ 0 & \text { otherwise }\end{array}\right.$ <br> and if $Y=X^{2}$, then the expected value of $Y$ is <br> decimal place) |  |

## Q. 36 - Q. 65 Carry TWO marks Each

| Q.36 | The value of the surface integral $\iint\left(x^{2} d y d z+y^{2} d z d x+z^{2} d x d y\right)$ over the <br> surface of the cube given by $0 \leq x \leq 2,0 \leq y \leq 2,0 \leq z \leq 2$, is |
| :--- | :--- |
| (A) | 12 |
| (B) | 24 |
| (C) | 36 |
| (D) | 48 |

| Q. 37 | If the system of linear equations, $x-a y-z=0, a x-y-z=0$, <br> $x+y-z=0$, has infinite number of solutions, then the possible values of $a$ are |
| :--- | :--- |
|  |  |
| (A) | 0,1 |
| (B) | $-1,2$ |
| (C) | $-1,1$ |
| (D) | $0,-1$ |

| Q.38 | Two 30 m long bilge keels of mass 40 tonnes each, are fitted at the turn of the <br> bilge on port and starboard sides of a ship. The cross section of the bilge keel is <br> shown in the following figure. Assume density of water $=1000 \mathrm{~kg} / \mathrm{m}^{3}$. If the TPC <br> (tonnes per centimeter) immersion of the ship is 50 , then the change in the mean <br> draft is__cm |
| :--- | :--- |
| (A) | 1 |
| (B) | 0.8 |
| (D) | 1.6 |
|  |  |

| Q. 39 | The layout of a Tension Leg Platform (TLP) is shown in the following figure. It consists of four interconnected pontoons at the bottom and four cylindrical columns, which support the working platform at the top. The density of sea water is $1025 \mathrm{~kg} / \mathrm{m}^{3}$. Neglect the weight and buoyancy of the tethers. During operation, the maximum mass (in metric tonnes) of the entire structure must lie between |
| :---: | :---: |
|  |  |
| (A) | 18630 and 18635 |
| (B) | 28635 and 28640 |
| (C) | 25655 and 25660 |
| (D) | 24560 and 24565 |

| Q.40 | The trajectory of a model ship during a pure sway PMM test is shown below. <br> The steady forward speed, u is $2.0 \mathrm{~m} / \mathrm{s}$. The maximum amplitude of sway motion, <br> $y_{\text {Max }}$ is 0.5 m and its period is 8 s . The magnitude of maximum drift angle, in <br> degrees (round off to the nearest integer), and the magnitude of maximum sway <br> acceleration, in $\mathrm{m} / \mathrm{s}^{2}$ (round off to one decimal place), of the model respectively <br> are |
| :--- | :--- |
| (A) | 11 and 0.3 |

| Q.41 | A ship of length 125 m has a design speed of 25 knots $(1 \mathrm{knot}=0.5144 \mathrm{~m} / \mathrm{s}) . \mathrm{A}$ <br> 5.0 m long geometrically similar model with wetted surface area of $4 \mathrm{~m}^{2}$ has a <br> coefficient of residuary resistance of $1.346 \times 10^{-3}$ at the corresponding speed. The <br> ship's residuary resistance in kN (in sea water of density $\left.1025 \mathrm{~kg} / \mathrm{m}^{3}\right)$, and the <br> model speed in knots (round off to the nearest integer) respectively are |
| ---: | :--- |
| (A) | 285 and 5 |
| (B) | 17 and 5 |
| (C) | 285 and 1 |
| (D) | 17 and 1 |

| Q. 42 | A fully filled water tank OABCD has a circular arc (AB) of radius 10 m at the <br> bottom as shown in the following figure. The height BC is 10 m . The length OA <br> and CD are 5 m and 15 m , respectively. The density of the water is $\rho \mathrm{kg} / \mathrm{m}^{3}$ and <br> the acceleration due to gravity is $\mathrm{g} \mathrm{m} / \mathrm{s}^{2}$. The magnitude of the resultant <br> hydrostatic force per unit width acting on AB in $\mathrm{N} / \mathrm{m}$ lies between |
| :--- | :--- |
| (A) $190 \rho g$ and $200 \rho g$ | $210 \rho g$ and $220 \rho g$ |
| (C) | $230 \rho g$ and $240 \rho g$ |

| Q. 43 | The velocity vector of a 2D flow field is given by $\vec{V}=2 y^{2} \hat{\boldsymbol{\imath}}+x^{2} t \hat{\boldsymbol{\jmath}}$. |
| :--- | :--- |
| The acceleration is |  |
| (A) | $4 x^{2} t y \hat{\boldsymbol{\imath}}+\left(x^{2}+4 x y^{2} t\right) \hat{\boldsymbol{\jmath}}$ |
| (B) | $4 x^{2} t y \hat{\boldsymbol{\imath}}-\left(x^{2}+4 x y^{2} t\right) \hat{\boldsymbol{\jmath}}$ |
| (C) | $4 x^{2} t y \hat{\boldsymbol{\imath}}+x^{2} \hat{\boldsymbol{\jmath}}$ |
| (D) | $x^{2} \hat{\boldsymbol{\jmath}}$ |

| Q. 44 | Water is flowing with a free stream velocity of $0.25 \mathrm{~m} / \mathrm{s}$ around a submerged flat <br> plate of 2 m length (in the direction of flow) and 1 m width. The local shear stress <br> at a distance $x$ from the leading edge of the plate is given by |
| :--- | :--- |
| $\qquad \tau=\frac{0.332 \rho u^{2}}{\sqrt{R e_{x}}}$ |  |
| where $\rho=1000 \mathrm{~kg} / \mathrm{m}^{3}$ is the density of the water, $u$ is the free stream velocity |  |
| and $R e_{x}$ is the Reynolds number at $x$. Assume that the flow is laminar, and the |  |
| kinematic viscosity of water is $10^{-6} \mathrm{~m}^{2} / \mathrm{s}$. The drag force (in Newton) acting on |  |
| one side of the plate lies between |  |$\quad$| (A) | 0 and 0.05 |
| :--- | :--- |
| (B) | 0.05 and 0.10 |
| (C) | 0.10 and 0.15 |
| (D) | 0.15 and 0.20 |

| Q.45 | For a 2D ideal flow, let $\varphi$ be the velocity potential and $\psi$ be the stream function. <br> Which one of the following is TRUE? |
| :--- | :--- |
| (A) | $\nabla^{2} \varphi=0$ and $\|\nabla \psi\|^{2}=\|\nabla \varphi\|^{2}$ |
| (B) | $\nabla^{2} \varphi=0$ and $\nabla \psi \cdot \nabla \varphi \neq 0$ |
| (C) | $\nabla^{2} \psi=0$ and $\|\nabla \psi\|^{2} \neq\|\nabla \varphi\|^{2}$ |
| (D) | $\nabla^{2} \psi=0$ and $\nabla \psi \times \nabla \varphi=0$ |

| Q. 46 | A long body with elliptical cross section is held perpendicular to a 2 D uniform steady flow field of horizontal velocity $U_{\infty}$ as shown in the following figure. The heights of the control volume (bounded by the dashed lines) at the inlet and outlet are $2 h$ and $4 h$, respectively. The profile of the horizontal velocity far downstream is given by $U(y)=\frac{U_{\infty} y}{2 h}$. The density of the fluid is $\rho$. The magnitude of the drag force per unit length acting on the body is |
| :---: | :---: |
|  |  |
| (A) | $\frac{2 \rho U_{\infty}{ }^{2} h}{3}$ |
| (B) | $\frac{\rho U_{\infty}{ }^{2} h}{3}$ |
| (C) | $\frac{\rho U_{\infty}{ }^{2} h}{2}$ |
| (D) | $\frac{2 \sqrt{2} \rho U_{\infty}{ }^{2} h}{3}$ |

| Q. 47 | A ' $T$ ' section is welded to the flat bottom shell plate of a ship as shown in the following figure (bottom shell longitudinal). The neutral axis of the ship's midship section is 14 m above the bottom shell plate. The distance ( X ) of neutral axis of the ' T ' section from the ship's neutral axis is $\qquad$ $m$ (round off to two decimal places) |
| :---: | :---: |
|  |  |
| (A) | 12.63 |
| (B) | 13.63 |
| (C) | 15.24 |
| (D) | 11.24 |

| Q. 48 | A vertical frictionless piston-cylinder arrangement contains air of mass 1 kg . During a process, 50 J of heat is transferred from outside to the system such that the piston is raised slowly by 0.1 m from its initial equilibrium position. The mass of the piston is 1 kg , and the diameter is 0.1 m . Assume that $\mathrm{g}=9.81 \mathrm{~m} / \mathrm{s}^{2}$, and $\mathrm{P}_{\mathrm{atm}}=100 \mathrm{kPa}$. The change in internal energy of the air in J (round off to two decimal places) lies between |
| :---: | :---: |
|  |  |
| (A) | 28.45 and 28.55 |
| (B) | -28.55 and -28.45 |
| (C) | -29.55 and -29.45 |
| (D) | 129.45 and 129.55 |

| Q.49 | An insulated nozzle has an inlet cross-sectional area of $314 \mathrm{~cm}^{2}$. Air flows <br> through the nozzle with an inlet temperature of 300 K at a steady rate of <br> $1.256 \mathrm{~m}^{3} / \mathrm{s}$. The velocity at the exit is greater than that at the inlet by $210 \mathrm{~m} / \mathrm{s}$. <br> Assume a constant $\mathrm{C}_{\mathrm{p}}=1.004 \mathrm{~kJ} / \mathrm{kg}$-K. The temperature (in K ) of air at the exit <br> of the nozzle lies between |
| ---: | :--- |
| (A) | 330 and 331 |
| (B) | 269 and 270 |
| (C) | 320 and 321 |
| (D) | 277 and 278 |

| Q.50 | The heave natural frequencies of a Jacket structure, FPSO and a semi- <br> submersible are $\omega_{\mathrm{J}}, \omega_{\mathrm{F}}$ and $\omega_{\mathrm{S}}$ respectively. Each one of them has a pay load <br> capacity of 10000 tonnes. Which of the following is TRUE? |
| :--- | :--- |
| (A) | $\omega_{\mathrm{J}}<\omega_{\mathrm{F}}<\omega_{\mathrm{S}}$ |
| (B) | $\omega_{\mathrm{J}}>\omega_{\mathrm{F}}>\omega_{\mathrm{S}}$ |
| (C) | $\omega_{\mathrm{J}}<\omega_{\mathrm{S}}<\omega_{\mathrm{F}}$ |
| (D) | $\omega_{\mathrm{J}}>\omega_{\mathrm{S}}>\omega_{\mathrm{F}}$ |

| Q.51 | A simply supported beam with an overhang has experienced the bending moment <br> as shown below. The corresponding concentrated load is |
| :--- | :--- |
| (A) | 5 kN at mid span of PR |
| (B) | 10 kN at Q |
| (C) | 10 kN at mid span of RS |
| (D) | 5 kN at S |

| Q.52 | Let $L=\left(\begin{array}{cccc}3 & -1 & -1 & -1 \\ -1 & 2 & -1 & 0 \\ -1 & -1 & 3 & 0 \\ -1 & 0 & -1 & 1\end{array}\right)$. Which of the following are TRUE? |
| ---: | :--- | :--- |
| (A) | The matrix $L$ is row equivalent to $\left(\begin{array}{cccc}0 & 0 & 0 & 0 \\ -1 & 2 & -1 & 0 \\ -1 & -1 & 3 & 0 \\ -1 & 0 & -1 & 1\end{array}\right)$ |
| (B) | The linear system $L x=b$ has a solution for all $b$ |
| (C) | For $b \neq\left(\begin{array}{l}1 \\ 1 \\ 1 \\ 1\end{array}\right)$, the system $L x=b$ has a solution |
| (D) | Rank of the matrix $L$ is 3 |

| Q.53 | For a given time varying load applied on a single degree of freedom system, the <br> dynamic response amplitude is always less than the static response amplitude if |
| ---: | :--- |
| (A) | the applied loading frequency is greater than 1.5 times the natural frequency of <br> the system |
| (B) | the damping is greater than $70 \%$ of critical damping |
| (C) | the damping is exactly $1 / 3^{\text {rd }}$ of critical damping |
| (D) | the applied loading frequency is less than the natural frequency of the system <br> for an undamped system |

| Q.54 | The stress field, <br> $\sigma_{x}=4 x^{3}+3 x^{2} y+5 x y^{2}$ <br> $\sigma_{y}=-x^{3}+6 x^{2} y-7 x y^{2}$ <br> $\tau_{x y}=-5 x^{2} y-3 x y^{2}$ <br> would satisfy the strain compatibility condition if |
| ---: | :--- |
| (A) | both $\sigma_{\mathrm{x}}$ and $\sigma_{\mathrm{y}}$ are multiplied by $1 / 2$ |
| (B) | both $\sigma_{\mathrm{x}}$ and $\sigma_{\mathrm{y}}$ are multiplied by 2 |
| (C) | $\tau_{\mathrm{xy}}$ is multiplied by $1 / 2$ |
| (D) | $\tau_{\mathrm{xy}}$ is multiplied by 2 |

| Q.55 | If $y(x)$ is the solution of the differential equation <br> $\left(1+x^{2}\right) y^{\prime \prime}-2 x y^{\prime}=0$ |
| :--- | :--- |
| satisfying $y(0)=0$ and $y^{\prime}(0)=3$, then $y(1)$ equals |  |
| Q.56 | For a ship of length $\mathrm{L}=100 \mathrm{~m}$, the distance between the bow and stern pressure <br> system is 0.942 L. Assume $\mathrm{g}=10 \mathrm{~m} / \mathrm{s}^{2}$. The ship velocity corresponding to the <br> prismatic hump of the wave making resistance curve is <br> to one decimal place) |
| $\mathrm{m} / \mathrm{s}$ (round off |  |

| Q. 57 | A vessel of 100 m length has a constant triangular cross-section with a depth of <br> 12 m and breadth of 15 m as shown in following figure. The vessel has a vertical <br> center of gravity $(\mathrm{KG})=6.675 \mathrm{~m}$. The minimum draft (d), at which the vessel <br> will become stable is _round off to one decimal place) |
| :--- | :--- |

| Q. 60 | A simple vapor compression refrigeration cycle with ammonia as the working fluid operates between $30^{\circ} \mathrm{C}$ and $-10^{\circ} \mathrm{C}$ as shown in the following figure. The saturated liquid and vapor enthalpies at $30^{\circ} \mathrm{C}$ and $-10^{\circ} \mathrm{C}$ are provided in the table below. If the COP of the cycle is 5.6, the specific enthalpy at the inlet to the condenser is $\qquad$ $\mathrm{kJ} / \mathrm{kg}$ (round off to the nearest integer) |  |  |
| :---: | :---: | :---: | :---: |
| Temperature $\left({ }^{\circ} \mathrm{C}\right)$ $\mathrm{h}_{\mathrm{f}}(\mathrm{kJ} / \mathrm{kg})$ $\mathrm{hg}_{\mathrm{g}}(\mathrm{kJ} / \mathrm{kg})$ <br> 30 320 1460 <br> -10 130 1420 |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

| Q.61 | An air-standard diesel cycle, as shown in the following figure with a compression <br> ratio of 16, has an initial pressure 0.9 bar and temperature 300 K. Assume <br> $\gamma=1.4$ and $C_{p}=1.004 \mathrm{~kJ} / \mathrm{kg}$-K. If the heat added during the constant pressure <br> process is $900 \mathrm{~kJ} / \mathrm{kg}$, then the peak temperature during the cycle is __ <br> (round off to the nearest integer) |
| :--- | :--- |
| Q.62 | A tsunami that originated off the Indonesian coast has propagated towards the <br> east-coast of India. It enters the continental shelf at 150 km away from the coast <br> of Chennai. If the average water depth is 80 m from the coast to the continental <br> shelf and 20 minutes is the tsunami period, the time taken by the tsunami to reach <br> the coast of Chennai on entering the continental shelf is <br> to two decimal places) |
|  | A bours (round off <br> freedom system. If the total damping in the system is set as 188.5 N -s $/ \mathrm{m}, ~ s u c h ~$ <br> that the oscillation just ceases to occur, then the natural period of the system is |

| Q. 64 | Consider a truss as shown in the following figure. The length of each member is <br> 2 m. The area of cross section of each member is $100 \mathrm{~mm}^{2}$ and Young's modulus <br> is $2 \times 10^{5} \mathrm{~N} / \mathrm{mm}^{2}$. The vertical deflection at C is__ment (round off to one <br> decimal place) |
| :--- | :--- |
| mm |  |

| Q. 65 | A marker buoy of mass 1500 kg floating in sea water of density $1025 \mathrm{~kg} / \mathrm{m}^{3}$, <br> consists of a cylinder and cone as shown in the following figure. The buoy is <br> suitably ballasted to make it stable in the floating condition. The buoy is subjected <br> to an external periodic excitation force in Newton, $F_{e}(t)=2000 \sin (1.25 t)$. <br> Ignore damping effects and assume $\mathrm{g}=9.81 \mathrm{~m} / \mathrm{s}^{2}$, added mass $=25 \%$ of the mass <br> of the buoy. The maximum heave response amplitude of the buoy is__m <br> (round off to one decimal place) |
| :--- | :--- |
