1. The physical quantity which has the dimensional formula $M^1T^{-3}$ is
   (1) Compressibility  (2) Density
   (3) Solar constant  (4) Surface tension
2. A ball is dropped downwards. After 1 second another ball is dropped downwards from the same point. What is the distance between them after 3 seconds
   (1) 20 m  (2) 9.8 m  (3) 25 m  (4) 50 m
3. If a particle of mass $m$ is moving in a horizontal circle of radius $r$ with a centripetal force $-\frac{1}{r^2}$, the total energy is
   (1) $-\frac{4}{r}$  (2) $-\frac{2}{r}$
   (3) $-\frac{1}{r}$  (4) $-\frac{1}{2r}$
4. A cubical block of side $a$ is moving with velocity $v$ on a horizontal smooth plane as shown. It hits a ridge at point O. The angular speed of the block after it hits O is
   (1) $\frac{3\sqrt{2}a}{2}$  (2) $\sqrt{\frac{3v}{\sqrt{2}a}}$
   (3) $\frac{3v}{4a}$  (4) Zero
5. A second’s pendulum is mounted in a rocket. Its period of oscillation decreases when the rocket
   (1) Moves up with uniform acceleration
   (2) Moves up with a uniform velocity
   (3) Comes down with uniform acceleration
   (4) Moves round the earth in a geostationary orbit.
6. Consider a car moving along a straight horizontal road with a speed of 72 km/h. If the coefficient of static friction between the tyres and the road is 0.5, the shortest distance in which the car can be stopped is $[g = 10 \text{ ms}^{-2}]$
   (1) 20 m  (2) 40 m  (3) 30 m  (4) 72 m
7. A force acts on a 3.0 gm particle in such a way that the position of the particle as a function of time is given by $x = 3t - 4t^2 + t^3$, where $x$ is in metres and $t$ is in seconds. The work done during the first 4 seconds is
   (1) 530 mJ  (2) 490 mJ
   (3) 450 mJ  (4) 2.28 J
8. A body of mass 2 kg collides with a wall with speed 100 m/s and rebounds with same speed. If the time of contact was 1/50 second, the force exerted on the wall is
   (1) $10^4$ N  (2) 4N
   (3) $2 \times 10^4$ N  (4) 8 N
9. If momentum is increased by 20%, then K.E. increases by
   (1) 55%  (2) 77%
   (3) 66%  (4) 44%
10. The decrease in the potential energy of a ball of mass 20 kg which falls from a height of 50 cm is
    (1) 98 J  (2) 968 J
    (3) 1980 J  (4) None of these
11. In a rectangle ABCD (BC = 2AB). The moment of inertia along which axis will be minimum
12. In a carbon monoxide molecule, the carbon and the oxygen atoms are separated by a distance $1.12 \times 10^{-10}$ m. The distance of the centre of mass from the carbon atom is

(1) $0.64 \times 10^{-10}$ m  
(2) $0.56 \times 10^{-6}$ m  
(3) $0.51 \times 10^{-10}$ m  
(4) $0.48 \times 10^{-10}$ m

13. For a satellite escape velocity is 11 km/s. If the satellite is launched at an angle of 60° with the vertical, then escape velocity will be

(1) $33 \text{ km/s}$  
(2) $\frac{11}{\sqrt{3}} \text{ km/s}$  
$11\sqrt{3} \text{ km/s}$  
(4) $11 \text{ km/s}$

14. If the radius of the earth shrinks by 1.5% (mass remaining same), then the value of acceleration due to gravity changes by

(1) 1%  
(2) 3%  
(3) 4%  
(4) 2%

15. In which case there is maximum tension in the wire, if same force is applied on each wire

(1) $L = 400 \text{ cm, } d = 0.01 \text{ mm}$  
(2) $L = 300 \text{ cm, } d = 0.03 \text{ mm}$  
(3) $L = 200 \text{ cm, } d = 0.02 \text{ mm}$  
(4) $L = 500 \text{ cm, } d = 0.05 \text{ mm}$

16. If the surface tension of water is 0.06 Nm$^{-1}$, then the capillary rise in a tube of diameter 1 mm is ($\theta = 0^\circ$)

(1) 3.86 cm  
(2) 3.12 cm  
(3) 2.44 cm  
(4) 1.22 cm

17. 1 mole of gas occupies a volume of 100 ml at 50 mm pressure. What is the volume occupied by two moles of gas at 100 mm pressure and at same temperature

(1) 500 ml  
(2) 200 ml  
(3) 100 ml  
(4) 50 ml

18. What is the velocity of wave in monatomic gas having pressure 1 kilo pascal and density 2.6 kg/m$^3$

(1) $8.9 \times 10^3 \text{ m/s}$  
(2) 3.6 m/s  
(3) 0  
(4) None of these.

19. A gas mixture consists of 2 moles of oxygen and 4 moles of argon at temperature T. Neglecting all vibrational modes, the total internal energy of the system is

(1) $11RT$  
(2) $9RT$  
(3) $15RT$  
(4) $4RT$

20. A diatomic gas initially at 18°C is compressed adiabatically to one-eighth of its original volume. The temperature after compression will be

(1) 144°C  
(2) 891°C  
(3) 887°C  
(4) 18°C

21. The radiant energy from the sun incident normally at the surface of earth is 20 kcal/m$^2$ min. What would have been the radiant energy incident normally on the earth, if the sun had a temperature twice of the present one.

(1) 80 kcal/m$^2$ min  
(2) 320 kcal/m$^2$ min  
(3) 40 kcal/m$^2$ min  
(4) 160 kcal/m$^2$ min

22. The ratio of energy of emitted radiation of black body at 27°C and 927°C is

(1) 1:256  
(2) 1:64  
(3) 1:16  
(4) 1:4

23. Two waves of lengths 50 cm and 51 cm produced 12 beats per second. The velocity of sound is

(1) 360 m/s  
(2) 340 m/s  
(3) 331 m/s  
(4) 306 m/s

24. A whistle giving out 450 Hz approaches a stationary observer at a
22. A monoenergetic electron beam with electron speed of $5.28 \times 10^6$ ms$^{-1}$ is subjected to a magnetic field of $2 \times 10^{-4}$ T normal to the back velocity. What is the radius of the circular path traced by the beam? Given $e/m$ for electron $= 1.76 \times 10^{-11}$ C kg$^{-1}$.

(1) 20 cm  (2) 15 cm  
(3) 10 cm  (4) 5 cm

23. The energy of a photon corresponding to the visible light of maximum wavelength is approximately equal to

(1) 2.0 eV  (2) 2.5 eV  
(3) 1.0 eV  (4) 1.5 eV

24. A light signal (photon) cannot escape from the surface of a

(1) neutron star  (2) black hole  
(3) red giant  (4) white dwarf

25. On increasing the reverse bias to a large value in a pn junction diode, the current

(1) remains fixed  (2) suddenly increased
(3) decreases slowly  (4) increases slowly

26. In Boolean algebra $1 + 1$ equals

(1) 2  (2) 1
(3) 0  (4) both 0 and 1

27. Which of the following crystals have a hexagonal structure?

(1) zinc  (2) calcite  
(3) quartz  (4) both (1) & (3)

28. When a β-particle is emitted from a nucleus, the neutron-proton ratio

(1) is increased  (2) is decreased
(3) remains the same  (4) first decreases then increases

29. If the end A of a wire is irradiated with alpha rays and the end B is irradiated with beta rays, then

(1) a current will flow from B to A  (2) a current will flow from A to B
(3) there will be no current in the wire  (4) a current will flow from each end to the mid point of the wire

30. If A, Z and N denote the mass number, the atomic number and the neutron number for a given nucleus, then which of the following statement is incorrect?

(1) isobar have the same A but different Z and N
(2) isotopes have the same Z but different N and A
(3) isotopes have the same N but different A and Z
(4) N = Z + A

31. Moving with the same velocity, which of the following has the longest de Broglie wavelength?

(1) neutron  (2) proton
(3) β - particle  (4) α - particle

32. A concave lens of focal length 20 cm placed in contact with a plane mirror acts as a

(1) concave mirror of focal length 10 cm  (2) concave mirror of focal length 60 cm
(3) concave mirror of focal length 40 cm  (4) convex mirror of focal length 10 cm

33. If a graph is plotted between $1/v$ and $1/u$, which one of the graphs shown in figure is approximately correct?

(1) $1/v$  
(2) $1/v$
(3) $1/v$  (4) $1/v$

34. A particle of mass $m$ and $q$ is released from rest in a uniform electric field $E$. The kinetic energy attained by the particle, after moving a distance $x$ is

(1) $q^2 Ex$  (2) $q E x$
(3) $q E^2 x$  (4) $q E x^2$

35. A proton and an alpha particle enter a uniform magnetic field with the same
(4) A magnetic field is applied normally

38. The wavelength of the first line of Balmer series is 6563 Å. The Rydberg constant for hydrogen is about
(1) \(1.09 \times 10^5\) per m (2) \(1.09 \times 10^7\) per m
(3) \(1.09 \times 10^6\) per m (4) \(1.09 \times 10^7\) per m

39. Radius of \(^4\text{He}\) nucleus is 3 Fermi. The radius of \(^{206}\text{Pb}\) nucleus will be

§ Directions Q41 to 60 consists of two statements, one labelled the ‘Assertion (A)’ and the other labelled the ‘Reason (R)’. Examine these statements carefully and decide if

(1) If both assertion and reason are true statements and the reason is a correct explanation of the assertion
(2) If both assertion and reason are true statements but reason is not a correct explanation of the assertion
(3) If the assertion is true but the reason is a false statement
(4) If both assertion and reason are false statements.

41. Assertion (A) : The internal resistance of a cell depends on the concentration of the electrolyte used in the cell.
(1) (2) (3)
42. Assertiion (A) : Machine parts are jammed in winter.
(1) (2) (3)
43. Assertion (A) : Brilliant colours are seen in thin layer of oil on the surface.
(1) (2) (3)
44. Assertion (A) : Activity of \(10^8\) undecayed radioactive nuclei of half life 50 days is equal to that of \(1.2 \times 10^8\) undecayed nuclei of some other material with half life 60 days.
(1) (2) (3)
45. Assertion (A) : When two vibrating tuning forks having frequencies 256Hz and 512Hz are held near each other, beats can not be heard.
(1) (2) (3)
46. Assertion (A) : Isotopes of an element can be separated by using a mass spectrometer.
(1) (2) (3)
47. Assertion (A) : A solid floats in a liquid so that it is just submerged. When the liquid is heated the solid sinks to the bottom.
(1) (2) (3)

(1) 8 Fermi (2) 11.16 fermi
(3) 6 Fermi (4) 5 Fermi

40. An atom of mass number 15 and atomic number 7 captures an \(\alpha\) - particles and then emits a proton. The mass number and atomic number of the resulting product will respectively be
(1) 18 and 8 (2) 16 and 4
(3) 15 and 3 (4) 14 and 2
48. **Assertion (A)**: Two systems which are both in thermal equilibrium with a third system are in thermal equilibrium with each other.

   (1) 
   (2) 
   (3)

49. **Assertion (A)**: Heating engineers use u-values, rather than k-values when calculating heat losses through walls, windows and roofs.

   (1) 
   (2) 
   (3)

50. **Assertion (A)**: Two satellites of mass \( m_1 \) & \( m_2 \) (\( m_1 > m_2 \)) are going around the earth in orbits of radii \( r_1 \) and \( r_2 \) (\( r_1 > r_2 \)).

   (1) 
   (2) 
   (3)

51. **Assertion (A)**: If a convex lens of glass is immersed in water its power decreases.

   (1) 
   (2) 
   (3)

52. **Assertion (A)**: When light passes from one medium to another of different density the only quantity which is unchanged is its wavelength.

   (1) 
   (2) 
   (3)

53. **Assertion (A)**: The relative velocity of two photons travelling in opposite directions is \( c \).

   (1) 
   (2) 
   (3)

54. **Assertion (A)**: A thin aluminium disc spinning freely about a central pivot is quickly brought to rest when placed between the poles of a strong U-shaped magnet.

   (1) 
   (2) 
   (3)

55. **Assertion (A)**: If the law of gravitation becomes inverse cube law even then a line joining the sun and the planet sweeps equal areas in equal time intervals.

   (1) 
   (2) 
   (3)

56. **Assertion (A)**: A balloon stops rising after attaining a certain maximum height.

   (1) 
   (2) 
   (3)

57. **Assertion (A)**: A table cloth can be pulled from a table without dislodging the dishes.

   (1) 
   (2) 
   (3)

58. **Assertion (A)**: Alpha particles produce more intense ionisation than beta particles.

   (1) 
   (2) 
   (3)

**Reason (R)**: The heat flows spontaneously from a system at a higher temperature to a system at lower temperature.

   (4)

**Reason (R)**: The \( u \)-value of a single brick wall is \( 1.7 \text{Wm}^{-2}\text{K}^{-1} \).

   (4)

**Reason (R)**: They will have same velocity.

   (4)

**Reason (R)**: In water it behaves as a concave lens.

   (4)

**Reason (R)**: The wavelength of light is not related to the refractive index of the medium.

   (4)

**Reason (R)**: The rest mass of a photon is zero.

   (4)

**Reason (R)**: A current induced in a disc rotating in a magnetic field produces a force which tends to oppose the disc's motion.

   (4)

**Reason (R)**: A planet moves in an elliptical path.

   (4)

**Reason (R)**: Upthrust due to air decreases with height till it just balances the weight of the balloon.

   (4)

**Reason (R)**: To every action there is an equal but opposite reaction.

   (4)

**Reason (R)**: Alpha particles are positively charged.

   (4)
59. The velocity of sound in air increases due to the presence of moisture.

(1) (2) (3) (4)

50. Assertion (A) : The positive ray particles are more massive than electrons.

(1) (2) (3) (4)

**ANSWERS WITH HINTS & EXPLANATIONS**

1. Ans. (3) Solar constant is energy received per unit area per second

\[ \frac{ML^2T^{-2}}{L^2T} = M^1T^{-3} \]

2. Ans. (3)

\[ S_{13} - S_{22} = \frac{1}{2} \times 10 \times (9) - \frac{1}{2} \times 10 \times 14 = 25 \text{ m} \]

3. Ans. (4) \[ \frac{mv^2}{r} = \frac{1}{2} \text{ i.e., } mv^2 = \frac{1}{2} \frac{e^2}{r} \]

\[ \therefore K.E. = \frac{e^2}{2r} \text{ and P.E.} = \int F \, dr = -\frac{e^2}{r} \]

\[ \therefore \text{Total energy} = K.E. + P.E. = \frac{e^2}{2r} - \frac{e^2}{r} = -\frac{e^2}{2r} \]

4. Ans. (3) Angular momentum with respect O before colliding with O = \( \frac{Mv_o}{2} \)

On collision, the block will rotate about the side passing through O.

By law of conservation of angular momentum

\[ Mv_o \frac{a}{2} = I \omega \]

\[ \Rightarrow Mv_o \frac{a}{2} = \left( \frac{Ma^2}{6} + \frac{Ma^2}{2} \right) \omega \Rightarrow \omega = \frac{3v}{4a} \]

Where I is the moment of inertia of the block about the block about the axis perpendicular to the plane passing through O.

5. Ans. (1) \( T = 2\pi \sqrt{\frac{L}{g}} \)

Reason: (R) : The presence of moisture in air lowers the density of air.

6. Ans. (2) Friction = \( \mu mg \)

Hence retardation = \( \mu g = 0.5 \times 10 = 5 \text{ ms}^{-2} \)

Using \( v^2 - u^2 = 2ax \)

Taking \( v = 0, \ u = 20 \text{ ms}^{-1} \),

we get \( x = 40 \text{ m} \)

7. Ans. (4) \( W = \frac{1}{2} m (v_f^2 - v_o^2) \)

\[ v = \frac{dx}{dt} = 3 - 8t + 3t^2 \]

\[ \therefore v_0 = 3 \text{ m/s and } v_4 = 19 \text{ m/s} \]

\[ \therefore W = \frac{1}{2} \times 0.03 \times (19^2 - 3^2) = 5.28 \text{ J} \]

8. Ans. (3) \( \Delta p = F \Delta t \)

Here \( \Delta p = 2 \times (2 \times 100) = 400 \text{ ms}^{-1} \)

\[ F = \frac{400}{1/50} = 2 \times 10^4 \text{ N} \]

9. Ans. (4) \( K = \frac{p^2}{2m} \)

\[ \therefore K' = \left( \frac{120}{100 \text{ P}} \right)^2 = \frac{1.44 \times p^2}{2m} = 1.44 \text{ K} \]

\[ \therefore \Delta K = K' - K = 0.44 \text{ K} = 44\% \text{ K} \]

10. Ans. (1) \( \Delta U_p = mgh = 20 \times 9.8 \times 0.5 = 98 \text{ J} \)

11. Ans. (1) About EG, the maximum distance from the axis is the least.

12. Ans. (1) \( R_{CM} = \frac{12 \times 0 + 16 \times 12 \times 10^{-10}}{12 + 16} \)

\[ = \frac{16}{28} \times 1.12 \times 10^{-10} \text{ m} \]
13. Ans. (4) Escape velocity is same for all angles of projection.

14. Ans. (2) \( g = \frac{GM}{R^2} \)

\[ \Delta g = -2 \frac{\Delta R}{R} = -2 \times 1.5 = -3 \% \]

15. Ans. (1) \( Y = \frac{F}{A \Delta L} \)

\[ \Delta L \frac{f}{A} \frac{L}{Y} = \frac{F}{A} \frac{L}{Y} = \frac{4F}{\pi \left( \frac{d^2}{4} \right)} \frac{L}{Y} \]

Here \( L/d^2 \) is maximum for wire in option (1)

16. Ans. (3) Use ascent formula for capillary rise.

17. Ans. (3) For 1 mole of gas,

\[ 50 \times 100 = 1 \times R \times T \]

For 2 moles of gas,

\[ V \times 100 = 2 \times R \times T \]

\[ \Rightarrow V = 100 ml \]

18. Ans. (4) \( C = \sqrt{\frac{3P}{\rho}} = \sqrt{\frac{3 \times 10^3}{2.6}} = 40 \text{ m/s} \)

19. Ans. (1) Oxygen is diatomic gas, hence its energy of two moles

\[ = 2 \times \frac{5}{2} RT = 5RT \]

Argon is a monatomic gas, hence its internal energy of 4 moles

\[ = 4 \times \frac{3}{2} RT = 6RT \]

Total Internal energy \( = (6 + 5) RT = 11RT \)

20. Ans. (2) \( T_1 V_1^{-1} = T_2 V_2^{-1} \) Here \( r = 1.4 \).

21. Ans. (2) According to Stefan's law \( E \propto T^4 \)

\[ \Rightarrow \frac{E_1}{E_2} = \left( \frac{T_1}{T_2} \right)^4 \]

\[ \Rightarrow \frac{E_1}{E_2} = \left( \frac{1}{2R} \right)^4 = \frac{1}{16} \]

\[ \Rightarrow E_2 = 320 \text{ kcal/m}^2 \text{ min} \]

22. Ans. (1) \( E \propto T^4 \)

23. Ans. (4)

\[ n_1 = \frac{v}{\lambda_1} = \frac{v}{0.5} \text{ and } n_2 = \frac{v}{\lambda_2} = \frac{v}{0.51} \]

\[ \Delta n = n_1 - n_2 = v \left[ \frac{1}{0.5} - \frac{1}{0.51} \right] = 12 \]

\[ \Rightarrow v = 12 \times 0.51 \times 0.50 \times 0.01 = 306 \text{ m/s} \]

24. Ans. (1) The apparent frequency heard by the observer is given by

\[ n' = \frac{v}{v - v_5} n \]

Since the source is moving with velocity \( v_5 \) towards the stationary observer

\[ \frac{330}{330 - 3} \times 450 = \frac{330}{297} \times 450 = 500 \text{ Hz} \]

25. Ans. (1) The wave equation is

\[ y = A \sin(wt - kx + \phi) \]

26. Ans. (3)

\[ \frac{dv}{dt} = 0.5 \times 10 \pi \cos(10\pi t - 5x) \]

\[ = 5 \pi \cos(10\pi t - 5x) \]

\[ \Rightarrow \left( \frac{dv}{dt} \right)_{\text{max}} = 5 \pi \text{ m/sec} \]

27. Ans. (3)

\[ \Delta = \frac{D_1 - D_2}{\beta} = \frac{1 \times 5 \times 10^{-7}}{5 \times 10^{-3}} = 10^{-4} \text{ m} = 0.1 \text{ mm} \]

28. Ans. (1) Since \( P \) is ahead of \( Q \) by 90° and path difference between \( P \) and \( Q \) is \( \lambda/4 \). Therefore at \( A \), phase difference is zero, so intensity is 4I. At \( C \) it is zero and at \( B \), the phase difference is 90°, so intensity is 2I.

29. Ans. (3) Energy is conserved in the interference of light.

30. Ans. (4)

\[ \frac{1}{f} = (1/42 - 1) \left( \frac{R_1}{R_2} - \frac{1}{R_2} \right) \]

\[ = (1.6 - 1) \left( \frac{1}{1} - \frac{1}{-60} \right) \]

\[ = 0.6 \times \frac{1}{100} \text{ cm} \]

\[ \Rightarrow f = 100 \text{ cm} \]
1 = \frac{m}{2} \left( \frac{a}{2} \right)^2 + \frac{m}{2} \left( \frac{a}{2} \right)^2 = \frac{ma^2}{2}

Hence the correct choices is (2).

6. Ans. (1) The centripetal force is provided by the gravitational attraction of the earth. Hence the correct choice is (1).

7. Ans. (2) When stones are unloaded into the water in the tank, the volume of water displaced is equal to the volume of the stones. This is less than the volume of water having weight equal to the weight of stones because the density of stones is greater than that of water. Hence the water level falls, which is choice (2).

8. Ans. (1) Mass of water in first tube is
\[ m = \pi r_1^2 h_1 \]

Now, surface tension
\[ \sigma = \frac{h_1 \rho r'}{2} = \frac{h_1 \rho r'}{2} \]

where \( h' \) is the height to which water rises in the second tube and \( r' \) its radius. Since \( r' = 2r_1, h' = h/2 \)

Therefore, the mass of water in the second capillary tube is
\[ m' = \pi r_1^2 h_1 \rho = \pi (2r_1)^2 \frac{h_1 \rho}{2} \]
\[ = 2\pi r_1^2 h_1 \rho = 2 \times 2 \times 5 = 10 \text{ g} \]

Hence the correct choice is (1).

9. Ans. (2) Here \( l_1 = \frac{FL_1}{\pi r_1^2 Y} \)
and \( l_2 = \frac{FL_2}{\pi r_2^2 Y} \)

Therefore,
\[ \frac{l_1}{l_2} = \frac{L_1}{L_2} \times \left( \frac{r_2}{r_1} \right)^2 \]

Given \( L_2 = 2L_1 \) and \( r_2 = \frac{r_1}{2} \)
Thus, \( \frac{l_1}{l_2} = \frac{1}{2} \times \frac{1}{(2)^2} = \frac{1}{8} \)

10. Ans. (2) The latent heat of vaporization of water is very nearly 540 calories per gram. Therefore, heat released in the condensation of \( x \) gram of steam = 540 \( x \) calories. The latent heat of fusion of ice is very nearly 80 calories. Therefore, heat required to convert \( y \) gram of ice at 0°C to water at
\[ 100°C = 80 + y + 100 \frac{y}{180} \text{ calories} \]

Thus \( 180 \frac{y}{180} = 540 \frac{x}{y} \)

or \( \frac{y}{x} = 3 \)

Hence the correct choice is (2).

11. Ans. (3) \( PV' = \text{constant} \)

12. Ans. (2) If a force \( F \) is applied to a spring of force constant \( k \) and the spring extends by an amount \( x \), then \( F = kx \)

The extension \( x \) produced in a spring is proportional to its length. Thus, if the spring is cut into three equal pieces, the same force \( F \) will produce an extension \( x/3 \) in a piece. If \( k' \) is the constant of the piece, we have
\[ F = k' x/3 \]

Therefore
\[ \frac{k'}{3} = k \]

or \( k' = 3k \)

Thus, the force constant of each piece is 3k.

When springs are connected in parallel, the force constant of the combination is equal to the sum of the individual force constants of the springs so connected. Therefore, the force constant of the combination = 3k + 3k + 3k = 9k. Hence correct choice is (2).

13. Ans. (4) The speed of sound wave in the rod is
\[ v = \sqrt{\frac{\nu_0}{\rho}} = \sqrt{\frac{2 \times 10^{11}}{8000}} = 5000 \text{ ms}^{-1} \]

Time taken is \( = 1/5000 = 2 \times 10^{-4} \text{ s} \)

Hence the correct answer is (4).

14. Ans. (1) Electric field
\[ E = -\frac{dV}{dx} = -\frac{d}{dx} (5 + 4x^2) = -8x \]

Force on charge \((-q)\) = \(-q \cdot E = -8q \cdot x \)

At \( x = 0.5 \text{ m}, \) force \( = 8 \times 2 \times 10^{-6} \times 0.5 \)
\[ = 8 \times 10^{-6} \text{ N} \]

www.examrace.com
48. (1) Two systems are in thermal equilibrium with a third system implies that all are at the same temperature. Hence, they will also be in thermal equilibrium.

49. (3) The u-value of a single brick wall is 3.6 W m\(^{-2}\)K\(^{-1}\).

50. (3) \[
\frac{GM_0M}{r^2} = \frac{mv^2}{r}
\]
\[
\Rightarrow v = \frac{\sqrt{GM_0}}{r}
\]
\[
\therefore \frac{v_1}{v_2} = \frac{\sqrt{r_2}}{r_1}
\] Since \(r_1 > r_2, v_2 > v_1\)

51. (3) When a convex lens of glass (\(\mu = 3/2\)) is immersed in water (\(\mu = 4/3\)), its focal length increases. It becomes 4 times. This reduces its power to one-fourth its previous value. But the nature of the lens is not changed in this case. When a lens is immersed in medium whose refractive index is greater than that of the material of the lens, its nature reverses.

52. (4) In the act of refraction it is only the frequency that remains unchanged. Wavelength is related to the refractive index. Thus, both the assertion and the reason are wrong.

53. (2) Very high velocities can not be added directly as in classical mechanics because this would lead to a violation of the postulates of relativity. Such velocities are added in accordance with Lorentz transformations. It can be proved that any velocity added to the velocity of light gives velocity of light.

Relativistic mass of photon –

The relativistic momentum of photon is

\[
p = \frac{m_0V}{\sqrt{1 - \left(\frac{v^2}{c^2}\right)}}
\]

But

\[
p = \frac{h}{\lambda}
\]

\[
\Rightarrow \frac{h}{\lambda} = \frac{m_0V}{\sqrt{1 - \left(\frac{v^2}{c^2}\right)}}
\]

54. (1) This effect is due to the production of 'eddy currents' in the aluminum disc. They are produced due to the motion of disc in a magnetic field. According to Lenz's law they oppose this motion (which is the cause of their production) and eventually bring the disc to a stop.

55. (2) Sweeping qual areas in equal time intervals is a consequence of law of conservation of angular momentum. So long as the gravitational force is radial, no torque acts on the planet and the angular momentum is conserved.

It is also true that a planet moves in an elliptical orbit. But this is not the reason of the assertion.

56. (1) Balloon rises till the upthrust of air on it is greater than its weight. As the air becomes thinner with height, at height it is reached where upthrust becomes equal to the weight of the balloon. After this stage the balloon does not rise up further.

57. (2) The reason is law of inertia (Newton's first law of motion) and not law of action and reaction (Newton's third law of motion).

58. (1) The statements given in the assertion and the reason both are correct in themselves but high ionising power of alpha particles is not due to their positive charge. The greater ionisation power of alpha particles is due to their higher energy than beta particles.

59. (1) Velocity of sound in air is given by

\[
v = \sqrt{\frac{\rho}{d}}
\]

The density of water vapours is less that of dry air. Hence, the presence of moisture decreases density \(d\) of air. This results in increase of velocity of sound.

60. (3) Electrons being much lighter than positive ray particles (ions) are deflected more in a magnetic field.
1. 26 ml of CO₂ are passed over hot coke. The maximum volume of CO formed is:
   (1) 32 ml  (2) 52 ml  (3) 15 ml  (4) 10 ml

2. Unsuitability of nucleus is due to:
   (1) Low proton - electron ratio
   (2) High proton - electron ratio
   (3) High proton - neutron ratio
   (4) High neutron - proton ratio

3. Bohr's atomic theory gave the idea of:
   (1) Nucleus
   (2) Shape of sub-levels
   (3) Quantum numbers
   (4) Stationary states.

4. Which has maximum radioactive activity:
   (1) Uranium  (2) Plutonium
   (3) Radium    (4) Thorium

5. Overlapping of 2 hybrid orbitals can lead to the formation of:
   (1) π-bond  (2) σ-bond
   (3) Ionic bond (4) None

6. NF₃ is:
   (1) Having more dipole moment that NH₃
   (2) Having low value of dipole moment than NH₃
   (3) Electrovalent compound
   (4) Non-polar compound.

7. The compound having highest boiling point:
   (1) CH₄  (2) CH₃OH
   (3) CH₃Br  (4) CH₃Cl

8. An element A (at. wt. = 75) and B (at. wt. = 25) combine to form a compound. The compound contains 75% A by weight. The formula of the compound will be:
   (1) AB  (2) AB₃  (3) A₃B  (4) A₂B

9. The number of mili equivalents in 100 ml of 0.5 N HCl solution is:
   (1) 200  (2) 100
   (3) 50    (4) 25

10. Number of electrons involved in the reduction of Cr₂O₇⁻ ion in acidic solution to Cr³⁺ is:
    (1) 4  (2) 6  (3) 3  (4) 4

11. Stronger the oxidising agent, greater is the:
    (1) Oxidation potential
    (2) Reduction potential
    (3) Ionic behavior  (4) None

12. In a reaction 4 mole of electrons are transferred to one mole of HNO₃ when it acts as an oxidant. The possible reduction product is:
    (1) 1 mole NH₃  (2) 1 mole of NO₂
    (3) (1/2) mole N₂O  (4) (1/2) mole N₂

13. The volume at NTP occupied by 11 g of CO₂ is:
    (1) 11.2 litre  (2) 2.8 litre
    (3) 5.6 litre   (4) 2.4 litre

14. Which is not correct for catalyst. It:
    (1) Reduces activation energy of reaction
    (2) Specific in nature
    (3) Enhances the rate of reaction in both directions
    (4) Changes enthalpy of reaction

15. An albumin sol containing sodium chloride as an impurity can best be freed of this impurity by:
    (1) Electrophoresis  (2) Dialysis
    (3) Precipitation  (4) Filtration.

16. Which reaction gives more products as a result of increase in pressure:
    (1) 2HI → H₂ + I₂
    (2) 2SO₂ + O₂ → 2SO₃
    (3) H₂O + CO → H₂ + CO₂
    (4) H₂ + Br₂ → 2HBr

17. HCl does not behave as acid in:
    (1) C₆H₆  (2) NH₃  (3) H₂O  (4) None

18. The mixed salt among the following is:
19. If s and S are respectively solubility and solubility product of a sparingly soluble binary electrolyte, then:

(1) $s = S^{1/2}$  
(2) $s = 1/2S$  
(3) $s = S$  
(4) $s = S^2$

20. An aqueous solution contains a substance which yields

$4 \times 10^{-3}$ mol litre$^{-1}$ ion of H$_3$O$^+$.

If log 2 is 0.3010 the pH of the solution is:

(1) 2.398  
(2) 1.5  
(3) 3.0  
(4) 3.4

21. SOCl$_2$ + CH$_3$COOH

$\rightarrow$ CH$_3$COCl$^+$ + HCl + SO$_2$

The reaction is endothermic. A 10 degree centigrade temperature rise will cause the reaction ratio to:

(1) Decrease  
(2) Become exactly half  
(3) Remain unchanged  
(4) Become nearly double

22. An example of a closed system is:

(1) Hot liquid in closed beaker in equilibrium with its vapour  
(2) Hot liquid in an open beaker  
(3) Hot liquid in a sealed insulated beaker  
(4) None

23. If

H$_2$(g) + I$_2$(g) $\rightarrow$ 2HI (g); $\Delta$H = 12.40 kcal.

The heat information of HI is:

(1) 12.4 kcal  
(2) 6.20 kcal  
(3) ~ 6.20 kcal  
(4) ~ 12.4 kcal

24. If 50 ml of A$_2$B$_3$ reacts completely with 200 ml of C$_2$ in a closed vessel according to the equation,

2A$_2$B$_3$(g) + 5C$_2$(g) $\rightarrow$ 3C$_3$B$_2$(g) + CA$_4$ (g).

The composition of the mixture of gases is:

(1) 10 ml C$_2$, 25 ml C$_3$B$_2$, 100 ml CA$_4$  
(2) 25 ml C$_2$, 75 ml C$_3$B$_2$, 25 ml CA$_4$  
(3) 75 ml C$_2$, 75 ml C$_3$B$_2$, 25 ml CA$_4$  
(4) 100 ml C$_2$, 50 ml C$_3$B$_2$, 50 ml CA$_4$

25. If the atomic number of an element is 33, it will be placed in the periodic table in the:

(1) 7th group  
(2) 5th group  
(3) 4th group  
(4) 1st group

26. The volume of 10 Vol. of H$_2$O$_2$ required to liberate 500 ml O$_2$ at NTP is:

(1) 125 ml  
(2) 100 ml  
(3) 25 ml  
(4) 50 ml

27. The oxide of which metal is most stable to heat:

(1) Ag  
(2) Hg  
(3) K  
(4) All of these

28. A hydride of nitrogen which is acidic in nature is:

(1) N$_3$H  
(2) N$_2$H$_2$  
(3) N$_2$H$_4$  
(4) NH$_3$

29. Which melts in boiling water:

(1) Bell metal  
(2) Monel metal  
(3) Wood's metal  
(4) Gum metal

30. Nitric acid may be kept in a bottle of:

(1) Sn  
(2) Al  
(3) Pb  
(4) Ag

31. When Zn reacts with very dilute nitric acid it produces:

(1) H$_2$  
(2) NO$_2$  
(3) NH$_4$NO$_3$  
(4) NO

32. Which loses weight on exposure to the atmosphere:

(1) Anhyd. AlCl$_3$  
(2) NaOH  
(3) Conc. H$_2$SO$_4$  
(4) Saturated aqueous solution of CO$_2$

33. The reaction of chlorine with CO in the presence of sunlight gives:

(1) H$_2$C=O$_2$  
(2) HOCI  
(3) CO$_2$Cl$_2$  
(4) COCl$_2$

34. The gas used for inflating the tyres of aeroplanes is:

(1) Ar  
(2) He  
(3) H$_2$  
(4) N$_2$

35. d-Block elements are arranged in...

... of periodic table:

(1) Six series  
(2) Four series  
(3) Three series  
(4) Two series.

36. Which on mixing gives deep brown colour:

---

www.examrace.com
(1) NO + O₂  
(2) N₂O + O₂  
(3) N₂O₃ + O₂  
(4) None  
O₃/NaOH  
Zn/CH₃COOH  

37. CH = CH  → X  → Y  

Y is  
(1) CH₃OH  
(2) CH₃COOH  
(3) CH₃CH₂OH  
(4) CH₂OH - CH₂OH  

38. Which is expected to react most readily with bromine:  
(1) CH₃ - CH = CH₂  
(2) CH = CH  

§ Directions Q41 to 60 consist of two statements, one labelled the ‘Assertion (A)’ and the other labelled the ‘Reason (R)’. Examine these statements carefully and decide if  

(1) If both assertion and reason are true statements and the reason is a correct explanation of the assertion  
(2) If both assertion and reason are true statements but reason is not a correct explanation of the assertion  
(3) If the assertion is true but the reason is a false statement  
(4) If both assertion and reason are false statements.  

41. Assertion (A): Water is specially effective in screening the electrostatic interactions between the dissolved ions.  
(1)  
(2)  
(3)  

42. Assertion (A): The nearly tetrahedral arrangement of the orbitals about the oxygen atom allows each water molecule to form hydrogen bonds with as many as four neighboring water molecules.  
(1)  
(2)  
(3)  

43. Assertion (A): Methanoic acid reduces mercuric chloride to mercurous chloride on heating while ethanoic acid does not.  
(1)  
(2)  
(3)  

44. Assertion (A): Phenol undergoes Kolbe’s reaction whereas ethanol does not.  
(1)  
(2)  
(3)  

45. Assertion (A): The pressure of a gas is inversely proportional to its volume at constant temperature and n.  
(1)  
(2)  
(3)  

46. Assertion (A): The oxidation numbers are artificial, they are useful as a ‘book-keeping’ device of electrons in reactions.  

(3) CH₂ = CH₂  
(4) CH₃CH₂CH₃  

39. The structural formula of the compound which yields ethylene upon reaction with zinc is:  
(1) CH₃Br - CH₃Br  
(2) CH₂Br₂ - CH₂Br₂  
(3) CH₂Br - CH₂Br  
(4) None  

40. Glycerol on treatment with potassium hydrogen sulphate yields  
(1) Acetaldehyde  
(2) Acrylic acid  
(3) Propane  
(4) Ethanol  

Reason (R): The force of ionic interactions depends upon the dielectric constant (ε) of the solvent.  

Reason (R): In ice each water molecule forms four hydrogen bonds as each molecule is fixed in the space.  

Reason (R): Methanoic acid is a stronger acid than ethanoic acid.  

Reason (R): Phenoxide ion is more basic than ethoxide ion.  

Reason (R): The gas volume is directly proportional to n at constant temperature and pressure.  

Reason (R): The oxidation numbers do not usually represent real charges on atoms, they are simply conventions that indicate what the maximum charge could possibly be on an atom in a molecule.
47. **Assertion (A)**: As mole is the basic chemical unit, the concentration of the dissolved solute is usually specified in terms of number of moles of solute.

48. **Assertion (A)**: The atoms of different elements having same mass number but different atomic number are known as isobars.

49. **Assertion (A)**: Lead is a metal with a high density. It readily dissolves in moderately concentrated nitric acid giving colourless fumes which turn red in contact with air.

50. **Assertion (A)**: p-nitroaniline is stronger base than p-toluidine.

51. **Assertion (A)**: When 20 ml of ethanol is mixed with 20 ml of water, the volume of resulting solution will be less than 40 ml.

52. **Assertion (A)**: Stannous chloride (SnCl₂) is a non-linear molecule.

53. **Assertion (A)**: During the fermentation of grape juice, a reddish brown coloured crust is formed.

54. **Assertion (A)**: An orbital cannot have more than two electrons, moreover, if an orbital has two electrons they must have opposite spins.

55. **Assertion (A)**: A spectral line will be seen for the transition 2px to 2py.

56. **Assertion (A)**: Alkenes and cycloalkanes series of hydrocarbons have same general formula.

57. **Assertion (A)**: The solubility of n-alcohols in water decreases with increase in molecular weight.

**Reason (R)**: The total number of molecules of reactants involved in a balanced chemical equation is known as molecularity of the reaction.

**Reason (R)**: The sum of protons and neutrons, in the isobars is always different.

**Reason (R)**: Nitric oxide (NO) is a colourless oxide of nitrogen while NO₂ is a coloured oxide of nitrogen.

**Reason (R)**: The electron withdrawing NO₂ group in the p-nitroaniline makes it a stronger base.

**Reason (R)**: The hydrogen bond between water and alcohol molecules is weaker than hydrogen bond between the like molecules.

**Reason (R)**: In (SnCl₂) molecule Sn atom is present in sp hybridised state.

**Reason (R)**: Impure potassium hydrogen tartrate is of reddish brown colour and it is known as argol.

**Reason (R)**: No two electrons in an atom can have same set of all the four quantum numbers.

**Reason (R)**: Energy is released in the form of wave of light when the electron drops from 2px to 2py orbital.

**Reason (R)**: Either insertion of a double bond or formation of a ring reduce the number of hydrogen atoms of corresponding alkane by 2.

**Reason (R)**: The relative proportion of the hydrocarbon part in alcohols increases with the increase in molecular weight which permits enhanced hydrogen bonding with water.

www.examrace.com
58. **Assertion (A)**: The carbonic acid is stronger acid than phenol.

**Reason (R)**: The hybrid of bicarbonate ion has two equivalent contributing structures, while hybrid of phenoxide ion does not contain such equivalent contributing structures.

59. **Assertion (A)**: When a concentrated solution is diluted by adding more water, the number of moles of solute in the solution remains unchanged.

**Reason (R)**: Number of moles of a solute is equal to the product of molarity and volume of solution in litres.

60. **Assertion (A)**: $_{14}^{30}$Si, $_{15}^{31}$P, and $_{16}^{32}$S are a group of isotones.

**Reason (R)**: Isotones are atoms of different elements having different mass numbers and atomic numbers but same number of neutrons in their nuclei.

---

**ANSWERS WITH HINTS & EXPLANATIONS**

1. Ans. (2) $CO_2 + C \rightarrow 2CO$

2. Ans. (4) n/p > 1.5 leads to unstable nucleus.

3. Ans. (4) Stationary states.

4. Ans. (3) Ra is most radioactive element.

5. Ans. (2) Hybrid orbitals always from $\sigma$-bond.

6. Ans. (2) In spite of three polar bond, the lone pair of electron on N atom decreases the dipole moment of NF$_3$ than NH$_3$

7. Ans. (2) Due to H-bonding.

8. Ans. (1) $g$ atom of A = $\frac{75}{75} = 1$;

   $g$ atoms of B = 25/25;

   : Ratio of $g$ atoms of A & B = 1:1

9. Ans. (3) Meq. = 100 x 0.5 = 50

10. Ans. (2) $Co^{5+} + 6e^- \rightarrow 2Cr^{3+}$

11. Ans. (2) More is $E^o_{op}$; more is the tendency to get itself oxidised, more is reducing nature.

12. Ans. (3) $4e^- + N_2^5+ \rightarrow N_1^{1+}$ : possible product is N$_2$O

13. Ans. (3) 44 g CO$_2$ occupies 22.4 litre at NTP.

14. Ans. (4) Catalyst does not make the reaction more exothermic or endothermic.

15. Ans. (2) Separation of soluble impurities from sol in followed by dialysis.

16. Ans. (2) An increase in $P$ favours the reaction showing decrease in volume.

17. Ans. (1) C$_6$H$_6$ is not capable of accepting proton.

18. Ans. (4) A mixed salt is one which furnishes two types of cations or anions.

19. Ans. (1) $S = s^2$ : $s = \sqrt{5}$ for electrolytes like AgCl, AgBr or AB type.

20. Ans. (1) $[H^+] = 4 \times 10^{-3}$ M

   : $pH = -\log 4 \times 10^{-3} = 2.395$

www.examrace.com
21. Ans. (4) Rate constant increases twice to thrice for each 10°C rise in temperature and therefore the rate also changes accordingly.

22. Ans. (1) A closed system can exchange energy from its surroundings.

23. Ans. (2) Heat of formation
\[ \frac{12.40}{2} = 6.20 \text{kcal} \]

24. Ans. (3) The mole ratio is 2:5:3:1

25. Ans. (2) The short hand notation for \( 33 \) is, \[ [\text{Ar}] 3d^{10} 4s^{2} 4p^{3} \]

26. Ans. (4) 10 vol. \( \text{H}_2\text{O}_2 \) means that 1 ml \( \text{H}_2\text{O}_2 \) gives 10 ml \( \text{O}_2 \); Thus 50 ml \( \text{H}_2\text{O}_2 \) will give 500 ml \( \text{O}_2 \).

27. Ans. (3) Ag and Hg oxides decompose on heating.

28. Ans. (1) \( \text{N}_3\text{H} \) is called hydrazoic acid.

29. Ans. (3) Wood metal has m.pt. 71°C

30. Ans. (2) Only \( \text{Al} \) among these does not react with \( \text{HNO}_3 \).

31. Ans. (3)
\[ 4\text{Zn} + 10\text{HNO}_3 \rightarrow 4\text{Zn} (\text{NO}_3)_2 + 2\text{NH}_4\text{NO}_3 + 3\text{H}_2\text{O} \]

32. Ans. (4) \( \text{CO}_2 \) gets evaporated slowly.

33. Ans. (4) \( \text{CO} + \text{Cl}_2 \rightarrow \text{COCl}_2 \)

34. Ans. (2) He is lightest (after \( \text{H}_2 \)), non inflammable gas.

35. Ans. (2) 3d, 4d and 5d series are complete and 6d series incomplete.

36. Ans. (1) \( 2\text{NO} + \text{O}_2 \rightarrow 2\text{NO}_2 \) (brown)

37. Ans. (4)
\[ \text{CH} = \text{CH} \xrightarrow{\text{ozonolysis}} \text{CHO} \cdot \text{CHO} \]
\[ \xrightarrow{\text{reduction}} \text{CH}_2\text{OH} \cdot \text{CH}_2\text{OH} \]

38. Ans. (3) Alkenes are more reactive than alkynes towards addition reaction also ethene is most reactive alkene.

39. Ans. (3) \( \text{Zn} \)
\[ \text{CH}_2\text{Br} - \text{CH}_2\text{Br} \xrightarrow{\text{----}} \text{CH}_2 = \text{CH}_2 + \text{ZnBr}_2 \]

40. Ans. (1) \( \text{KHSO}_4 \) is dehydrating agent.

41. (1) The strength of the force \( F \) of the ionic interaction depends upon the magnitude of charges \( Q \), the distance between them and the dielectric constant of solvent as
\[ F = \frac{Q_1 Q_2}{\varepsilon r^2} \]

Water has high value for \( \varepsilon \) and thus screens the interactions between ions more effectively.

42. (1) At any given instant in liquid water at room temperature, each water molecule forms hydrogen bonds with an average 3.4 other water molecules. The \( \text{H}_2\text{O} \) molecules are in continuous motion so hydrogen bonds are constantly and rapidly broken and formed. In ice \( \text{H}_2\text{O} \) molecules are, however, fixed in the space lattice.

43. (2) Methanoic acid reduces mercuric chloride as:
\[ \text{HCOOH} + 2\text{HgCl}_2 \rightarrow \text{CO}_2 + 2\text{HCl} + \text{H}_2\text{Cl}_2 \]

Ethanoic acid does not react with \( \text{HgCl}_2 \)

Since alkyl groups are electron releasing their presence in the molecule will decrease the acidity. Thus methanoic acid (HCOOH) is about 10 times stronger than ethanoic acid (\( \text{CH}_3\text{COOH} \)).

44. (3) Kolbe’s Reaction:
\[ \text{ONa} + \text{CO}_2 \xrightarrow{120^\circ\text{C}, 6-7 \text{ atm.}} \text{ONa} \]

Ethanol does not undergo this reaction.

Phenol is a stronger acid than ethanol. Hence the conjugate base (Phenoxide) will be weaker base than ethoxide ion.

45. (2)

46. (1)

47. (2) The number of moles of a solute present in a litre of solution is known as molarity \( (M) \).

The total number of molecules of reactants present in a balanced chemical equation is known as molecularity. For example
PCI₅ → PCI₃ + Cl₂ (Unimolecular)
2HCl → H₂ + I₂ (Bimolecular)

Therefore, molarity and molecularity are used in different sense.

48. (3) Isobars are the atoms of the different elements having same atomic weight or mass number. It means the sum of protons and neutrons will be same. Atomic number of isobars are different.

Hence, (A) is correct and (R) is wrong.

49. (1) 3Pb + 8HNO₃
    → 3Pb²⁺ + 6NO₃⁻ + 2NO + 4H₂O

   2NO + O₂ → 2NO₂
   Colourless → red

50. (4) The presence of electron releasing group like - CH₃ at para position increases the basic strength. On the other hand the electron withdrawing - NO₂ group decreases the basic strength. Hence p-nitroaniline is weaker base than p-toluidine.

51. (3) Due to the presence of hydrogen bonding between H₂O and C₂H₅OH the inter molecular attraction increases, therefore after mixing these two compound their volume of mixing decreases from expected volume.

52. (3) The SnCl₂ molecule is ‘V’ shaped and the hybridizaton involved in it is sp²

53. (1) A reddish brown crust of potassium hydrogen tartrate, known as argol, is deposited during the fermentation of grape juice.

54. (1) According to Pauli’s exclusion principle no two electrons in an atom can have same set of all the four quantum numbers. From this it follows that an orbital cannot have more than two electrons. If an orbital has two electrons then they have opposite spins.

55. (4) Spectral line can be seen only when electron jumps from higher energy level to lower energy level. But 2pₓ and 2pᵧ are the different configuration of same energy level.

56. (1) The general formula of alkene is CₙH₂ₙ and the general formula of cycloalkane is also CₙH₂ₙ. It is due to the formation of cyclic structure, carbon chain loses hydrogen atom from both end and become cycloalkane. This loss of two hydrogen atom gives the general formula CₙH₂ₙ

57. (3) It is true that solubility of alcohols decreases as the molecular weight of alcohol increases. It is due to the fact that bulky alkyl group pumps electron towards electronegative oxygen atom (+ I effect). This increase in electron cloud over oxygen atom, decrease the tendency of formation of hydrogen bond, hence, solubility decreases.

58. (1) The phenoxide ion C₆H₅—O⁻, does not have any contributing structure but HCO₃ ion has two contributing structure, that is why H₂CO₃ is stronger acid than C₆H₅OH

59. (1) It is true that number of solute never changes after dilution because number of moles of solute

\[
\text{No. of moles of solute} = \frac{\text{volume in (L)}}{\text{volume in (L)}}
\]

60. (1) Different atoms when contain same number of neutrons are called isotones.

1₄Si³⁰, 1₅P³¹ and 1₆S³² are isotones, because all of these contains 16 neutrons.

since, Atomic mass = n + p

For Si → 30 – 14 = 16
P → 31 – 15 = 16
S → 32 – 16 = 16
Part 3. BIOLOGY

1. The main difference between chlorophyll 'a' and 'b' is
   (1) Chlorophyll 'a' has no Mg²⁺ ion in centre of molecule
   (2) Chlorophyll 'a' is linear chain compound and 'b' is brached chain
   (3) In chlorophyll 'a' there is CH₃ group whereas in 'b' it is - CHO group
   (4) All of the above

2. Loops of lambrush chromosome are composed of
   (1) Protein and RNA
   (2) Double helix DNA only
   (3) Double helix DNA, protein and RNA
   (4) Single stranded DNA, protein and RNA

3. In F₂ generation of monohybrid cross the cause of 1 : 2 : 1 phenotypic ratio is
   (1) Inhibition
   (2) Epistatics
   (3) Incomplete dominance
   (4) Quantitative inheritance

4. The evidence that crossing over occurs at four stranded stage and not at two stranded stage of the chromosomes comes from
   (1) Studies of meiosis in maize
   (2) Studies on linkage maps of chromosomes in Drosophila
   (3) 4 : 4 arrangement of ascospores in Neurospora
   (4) 2 : 2 : 2 : 2 arrangement of ascospores in Neurospora

5. Why mycoplasma is pleomorphic
   (1) Due to the presence of sterol
   (2) Due to absence of cell wall
   (3) Due to presence of three layered cell membrane
   (4) None of these

6. Heterotrophic nutrition is found in
   (1) Pistia
   (2) Vallisnaria
   (3) Drosera
   (4) Opuntia

7. Pteridophytes are also called
   (1) Ctenophyta
   (2) Phanerogamia
   (3) Amphibian of plant kingdom
   (4) Vascular cryptogam

8. Which one of the following normally have cross pollination but are adapted for self pollination
   (1) Wheat
   (2) Sunflower
   (3) China rose
   (4) Mustard

9. Number of nuclei taking part in double fertilization is
   (1) 5
   (2) 4
   (3) 3
   (4) 2

10. Secondary wall is not formed in
    (1) Companion cells
    (2) Collenchyma
    (3) Parenchyma
    (4) All the above

11. Tracheids of angiosperms are recognised by the presence of
    (1) Scalaiform perforation plates
    (2) Scalaiform thickening
    (3) Bordered pits
    (4) None of the above

12. Which of the following is fertilizer
    (1) Urea
    (2) Ammonium chloride
    (3) Calcium citrate
    (4) Calcium carbonate

13. The conducting tissues of the plants are
    (1) Sclerenchyma
    (2) Phloem
    (3) Xylem
    (4) Xylem and phloem both

14. Pollen grains of some of the plants germinate on stigma soon but they burst in water or dilute sugar solution
    (1) Plasmolysis
    (2) Imbibition
    (3) Endosmosis
    (4) Exosmosis

15. Which of the following is responsible for rapid loss of water from plant
    (1) Water vapour saturation deficit
    (2) Water vapour saturation of air
    (3) More available soil water to the plant
    (4) None of the above

16. Who invented the enhancement effect on photosynthesis
    (1) Arnon
    (2) Emerson
17. Who received the Nobel Prize for working out the early carbon pathway of photosynthesis?
(1) Watson (2) Khorana (3) Krebs (4) Calvin

18. The number of molecules of pyruvic acid formed from one molecule of glucose at the end of glycolysis is:
(1) 4 (2) 3 (3) 1 (4) 2

19. End product of anaerobic respiration is:
(1) Pyruvic acid (2) Glucose (3) Ethyl alcohol and CO₂ (4) None of the above

20. Acetyl CoA enzyme belongs to:
(1) Hydrolase (2) Desmolase (3) Isomerase (4) Synthetase

21. Indicator plants which can be used to indicate atmospheric pollution by SO₂ are:
(1) Climbers like Cucurbita (2) Lichens like Usnea (3) Moss like Sphagnum (4) Grassland like Deschampsia

22. Deforestation may reduce the chances of:
(1) erosion of surface soil (2) frequent landslides (3) rainfall (4) frequent cyclones

23. Which of the following show the least constancy of shape?
(1) Leucocytes (2) Visceral muscle cells (3) Neurons (4) Erythrocytes

24. Shivering in cold is a method for:
(1) preventing radiation of heat from the body (2) production of heat by bringing more blood to the body surface (3) production of heat by muscular contractions (4) none of these

25. Lower jaw of tadpole is formed by:
(1) Coracoid (2) Meckel’s cartilage (3) Angulo-splenial (4) None of the above

26. Which of the following bone is a favoured site for obtaining haemopoetic tissue?
(1) Radius (2) Vertebral column (3) Cranium (4) Sternum

27. Certain B vitamins act as:
(1) Hormones (2) Digestive substance (3) Co-enzymes (4) Enzymes

28. When partial pressure of CO₂ rises, the oxygen dissociation curve of haemoglobin at 37°C will:
(1) remain unchanged (2) become irregular (3) shift towards left (4) shift towards right

29. In a normal man, the amount of blood put out by heart per minute is:
(1) 3 litres (2) 1 litre (3) 5 litres (4) 4 litres

30. Aquatic animals are mostly ammoneotelic because:
(1) these get less light (2) water contains less nitrogen (3) excretion of ammonia requires large amount of water which is available to these animals (4) ammonia helps in checking inflow of water into body

31. Heart beat is regulated by the working of:
(1) Midbrain (2) Diencephalon (3) Cerebrum (4) Medulla oblongata

32. Scala vestibul and scala media contain respectively:
(1) Perilymph only (2) Endolymph only (3) Perilymph and endolymph (4) Endolymph and perilymph

33. Which endocrine gland stores its secretion in the extracellular space before discharging it into the blood?
(1) Testis (2) Pancreas (3) Adrenal (4) Thyroid

34. Testes of rabbit occur:
(1) in scrotal sacs (2) on side of kidney
35. During fertilization, the enzyme which facilitates penetration of the egg by the spermatozoan is:

(1) acetylcholineesterase
(2) alkaline phosphatase
(3) acid phosphatase
(4) hyaluronidase

36. During regeneration, the following takes place:

(i) cell division  (ii) dedifferentiation
(iii) cell movement  (iv) tissue differentiation

The correct sequence is:

(1) (ii), (i), (iii), (iv)  (2) (i), (ii), (iii), (iv)
(3) (i), (iii), (ii), (iv)  (4) (iii), (ii), (i), (iv)

37. Laws of inheritance were given by:

(1) Mendel  (2) Darwin
(3) Khorana  (4) Lamarck

38. Chromosomes concerned with sex determination are:

(1) Oxsomes  (2) B-chromosomes
(3) Autosomes  (4) Heterosomes

39. Semiconservative DNA replication was first demonstrated by:

(1) Watson and Crick  (2) Khorana
(3) Meselson and Stahl  (4) Taylor

40. Which chromosome set is found in male grasshopper?

(1) XX  (2) YY  (3) X  (4) XY

§ Directions Q41 to 60 consists of two statements, one labelled the ‘Assertion (A)’ and the other labelled the ‘Reason (R)’. Examine these statements carefully and decide if

1. If both assertion and reason are true statements and the reason is a correct explanation of the assertion.
2. If both assertion and reason are true statements but reason is not a correct explanation of the assertion.
3. If the assertion is true but the reason is a false statement.
4. If both assertion and reason are false statements.

41. Assertion (A) : The chewing and lapping mouth parts consist of a long tongue which is formed from the glossae of the labium.

Reason (R) : The galeae are much elongated and coiled, each forming a half tube, which makes complete tube when both are locked together.

42. Assertion (A) : Left-handed DNA is known as B-DNA.

Reason (R) : Right-handed DNA is known as Z-DNA.

43. Assertion (A) : Translocations involve shifting, not deleting or adding genetic material which can cause chromosomal defects when gametes are formed.

Reason (R) : Translocations involve transfers of genetic material between homologous chromosomes.

44. Assertion (A) : They form mutualistic, commensalistic, or parasitic relationships.

Reason (R) : Heterotrophs may not be free living or symbiotic.

45. Assertion (A) : The sustaining surface for the gliding in certain animals, is a fold or series of folds of the skin known as patagium.

Reason (R) : The gliding flights are performed by arboreal animals.

46. Assertion (A) : Pyramid of energy shows energy accumulation pattern at different trophic levels.

Reason (R) : There is a gradual increase in the energy content at successive trophic level from producer to consumer.
47. **Assertion (A)**: In placental mammals the placenta is connected to the embryo by the umbilical cord and has an essential role in the immunological protection of the embryo.

48. **Assertion (A)**: The adult gametophyte is the conspicuous leafy green, photosynthetic plant popularly called moss.

49. **Assertion (A)**: Histone proteins are synthesized during the S-phase when DNA synthesis occurs.

50. **Assertion (A)**: Reduction division, in Selaginella, occurs during microspore formation only.

51. **Assertion (A)**: The conjunctiva is thin, little cornified and richly supplied with free nerve endings.

52. **Assertion (A)**: The water molecules are help together from mesophyll cells to the root hairs because of cohesive force.

53. **Assertion (A)**: Vitamin A is 11-cis-retinal, the lipid prosthetic group of the protein opsin in visual purple. Its deficiency affects all tissues, but the eyes are most readily affected.

54. **Assertion (A)**: Monocot stem has collateral open vascular bundle.

55. **Assertion (A)**: Cartilage (protein matrix) ad bone (calcium matrix) are rigid connective tissues.

56. **Assertion (A)**: G2 phase is mainly concerned with protein synthesis and RNA synthesis.

57. **Assertion (A)**: Identical twins are produced during two births, resulting from the division of a single fertilized egg.

58. **Assertion (A)**: If you burn a plant, its nitrogen component is given off as ammonia and other gases.

59. **Assertion (A)**: In a metabolic reaction with a negative ΔG, the products contain less free energy than the reactants, energy is released and entropy increases.

60. **Assertion (A)**: A protein that cycles in quantity as the cell cycle progresses; combines with and activates the kinases that function to promote the events of the cycle.

61. **Reason (R)**: In mammals foetal components of the placenta derive initially from the chondroblast connected with embryonic derive initially from the chondroblast connected with embryonic blood stream either through its contact with the yolk sac.

62. **Reason (R)**: The mosses, like liverworts, do not exhibit alteration of generation.

63. **Reason (R)**: Histone proteins form an association with DNA to form nucleosome.

64. **Reason (R)**: It has been proved experimentally by Zacharich in 1963.

65. **Reason (R)**: Conjunctiva is composed of squamous epithelium and is continuous with the dermis that lines the eyelids.

66. **Reason (R)**: Water does not ascend in the plant because of transpiration pull.

67. **Reason (R)**: Youngs lacking a liver store of this vitamin are most affected by deficiency, which causes Xerophthalmia in human infants and young children.

68. **Reason (R)**: If the cambium is absent such vascular bundle is called open type.

69. **Reason (R)**: Blood is connective tissue in which plasma is the matrix.

70. **Reason (R)**: Photosystem-1 is situated on the inner surface of thylakoid.

71. **Reason (R)**: They are of the different sex and otherwise genetically identical.

72. **Reason (R)**: Hydroponics does not allow plants to grow well if they are supplied with all the mineral nutrients they need.

73. **Reason (R)**: Such negative ΔG reaction is spontaneous because it occurs without an input of energy.

74. **Reason (R)**: A microtubule structure that brings about chromosomal movement during cell division is called kinetochore.

EXPLANATIONS
1. Chlorophyll 'a' is the most abundant photosynthetic pigment and is the only pigment found in all photosynthetic plants.
2. Lampbrush chromosomes were first discovered by Flemming in amphibian oocytes.
3. During incomplete dominance the recessive gene dilutes the dominant character and produces an intermediate character e.g., 4 O'clock plant pink flowers from red and white flowers.
4. It was made possible by tetrad analysis.
5. Due to absence of cell wall structural rigidity is absent.
6. Drosera is insectivorous plant.
7. They are called cryptogams because of naked seeds and are called vascular because of differentiation to some extent of vascular tissues.
8. Two during syngamy and three during triple fertilization.
9. These are characters of vessels.
10. Rest are salts.
11. By Endosmosis they take the water inside and thus burst.
12. Fructose –1, 6 –diphosphate breaks into Dihydroxyacetone and glyceraldehyde and each yield one molecule of pyruvic acid.
13. Because it helps in the synthesis of citric acid during kreb's cycle.
14. Because due to deforestation water loss in the atmosphere is reduced as plants are less in number to transpire.
15. FAD and FMN contain Riboflavin (Vit. B2) as a coenzyme as hydrogen acceptor.
16. Rise in pCO2 will lead to lowering of pO2 and thus % saturation of haemoglobin with oxygen will be lesser there by shifting the oxygen dissociation curve of haemoglobin to the right.
17. Animals consuming less water are urotellic.
18. Sperm penetrates the egg by the help of enzymes of hydrolase class which breaks the outer shell of egg.
19. Regeneration is the capacity of body to produce the lost part by proliferation of cells.
20. Heterosomes are found on the males e.g., Y chromosomes which are responsible for sex determination.
21. (3) In chewing lapping mouth parts a temporary respiration channel is formed by proboscis, galeae and labial palps filling together.
22. (4) Left-handed and right-handed DNAs are respectively known as Z-DNA and B-DNA.
23. Translocation of genetic material between non homologous chromosomes. Translocations may take a number of forms; the most common form involves a single break in each of two chromosomes and an exchange of broken pieces.
24. (3) Heterotrophs may be free-living or symbiotic, meaning that they form mutualistic, commensalistic or parasitic relationships.

www.examrace.com
45. (3) Patagium is concerned with flight or volant adaptations. The gliding flights are performed with the help of patagium by various lizards e.g., flying dragon.

46. (3) There is a gradual decrease in the energy content at successive trophic level from producers to consumers.

47. (3) In mammals foetal components of two placenta derive initially from the trophoblast connected with embryonic blood stream either through its contact with the yolk sac.

48. (3) The mosses, like the liverworts, exhibit a well-defined alternation of generations between gametophyte phase, whose cells contain a single set of chromosomes (n), and a sporophyte phase, whose cells contain a double set of chromosomes (2n).

49. (2) Histones are basic proteins of major importance in packaging of eukaryotic DNA. DNA and histones together comprise chromatin, forming the bulk of the eukaryotic chromosome. Histones are of five major types, H1, H2A and H2B are lysine rich; H3 and H4 arginine-rich, H1 units link neighbouring nucleosomes while the others are elements of nucleosome structure. Histone proteins are synthesized during the S-phase when DNA synthesis occurs.

50. (4) In Selaginella, reduction division occurs during formation of both microspores and megaspores.

51. (3) Conjunctiva is composed of stratified epithelium and in continuous with the epidermis, the lines the eyelids.

52. (3) According to cohesive-adhesive force theory of water molecules, water ascends in the plant because of transpiration pull and column of water remains continuous because of cohesive force of water molecules.

53. (1)

54. (4) Monocot stem has collateral closed vascular bundles. In monocot stem, cambium is absent such vascular bundles are called closed.

55. (2)

56. (4) Proteins and RNAs are synthesised in G1 phase during interphase. The photosystem-1 is located on the outer surface of the thylakoid.

57. (4) Identical twins are produced during one birth, resulting from the division of a single fertilized egg. They are of the different sex and genetically identical.

58. (3) The preferred method for determining the mineral requirements of a plant is called hydroponics (or water culture). Hydroponics allows plants to grow well if they are supplied with all the mineral nutrients they need.

59. (1)

60. (3) A microtubule structure that brings about chromosomal movement during cell division is called spindle.

---

**PART 4. GENERAL KNOWLEDGE**

1. Who was the first non - Indian to receive the Bharat Ratna?
   (1) Martin Luther King
   (2) Zubin Mehta
   (3) Mother Teresa
   (4) Khan Abdul Ghaffar Khan

2. The Satanic Verses is a book written by
   (1) Keri Hulme
   (2) Salman Rushdie
   (3) Daniel Pipes
   (4) Shaul Bakhash

3. Who among the following got the Nobel Prize for the discovery of neutron?
   (1) James Chadwick
   (2) J.J. Thomson
   (3) C.V. Raman
   (4) Niels Bohr

4. Who produced the first automobile?
   (1) Rudolf Diesel
   (2) Carl Benz
   (3) Henry Ford
   (4) Gottlieb Daimler

5. Kathakali is a dance of
   (1) Tamil Nadu
   (2) Kerala
   (3) Uttar Pradesh
   (4) Manipur

6. The first Asian Games were held in
   (1) Seoul
   (2) New Delhi
(3) Dhaka  (4) Colombo

7. Which eminent political personality played an important role in the drafting of the Indian Constitution?
(1) B.R. Ambedkar  (2) Dr. Rajendra Prasad
(3) Sardar Patel  (4) Jawaharlal Nehru

8. Which country has won the world cup football 1998?
(1) France  (2) Argentina
(3) Brazil  (4) Italy

9. The first astronaut to set foot on the moon was
(1) Edwin Aldrin  (2) Alan Shepherd
(3) Neil Armstrong  (4) Yuri Gagarin

10. Mansoor Ali Khan is well-known in India as
(1) an outstanding sportsman
(2) an Urdu novelist
(3) a sarod player
(4) a classical singer

11. The terms ‘Bears’ and ‘Bulls’ refer to those speculators who believe that prices of shares will
(1) come down and remain constant respectively
(2) go up and remain constant respectively
(3) go up and come down respectively
(4) come down and go up respectively

12. The United National Day is observed annually on
(1) 14th November  (2) 30th October
(3) 24th October  (4) 6th June

13. ‘March 8’ is celebrated as
(1) World Health Day
(2) National Integration Day

14. Which of the following is the indigenously developed multi-barrel rocket system of the Indian Army?
(1) Trishul  (2) Pinaka
(3) Akash  (4) Prithvi

15. Vilayat Khan is associated with
(1) Rudra Veena  (2) Shehnai
(3) Sitar  (4) Sarod

16. The author of the famous novel, “Anandmath” is
(1) Surendra Nath Banerjee
(2) Keshav Chandra Sen
(3) Subhas Chandra Bose
(4) Bankim Chandra Chatterjee

17. Which one of the following states leads in the production of coffee in India?
(1) Kerala  (2) Goa
(3) Karnataka  (4) Tamil Nadu

18. ‘Booker Prize’ is awarded for which of the following fields?
(1) Sports  (2) Social Services
(3) Literature  (4) None of these

19. Tripitakas is a sacred book of
(1) Hinduism  (2) Sikhism
(3) Buddhism  (4) Jainism

20. The present decimal system of numbers was the invention of
(1) Romans  (2) Indians
(3) Greeks  (4) Egyptians
